

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

### Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

### About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

ANNUAL REPORT

OF THE

COMMISSIONER OF PATENTS

FOR

THE YEAR 1865.

---

VOLUME I.

---

WASHINGTON:  
GOVERNMENT PRINTING OFFICE.  
1867.

# INDEX

## TO THE

### DESCRIPTIONS AND ILLUSTRATIONS.

Invention or Discovery.	Name of Patentee.	No.
<b>A.</b>		
Acids, pyroligneous	A. H. Emery	49, 347
Adding machine	T. T. Strode	49, 168
Addressing machine	N. E. and G. W. Warren	47, 142
Adhesive fastening for papers	G. R. Burdon	46, 071
Air, Carburetting	H. L. McAvoy	46, 302
Air, Carburetting	W. H. Buckland	46, 432
Air, Carburetting	J. A. Bassett	46, 771
Air, Carburetting	W. A. Simonds	46, 976
Air, Carburetting	J. H. Irwin	47, 256
Air, Carburetting	J. H. Irwin	47, 257
Air, Carburetting	J. H. Irwin and I. Simmons	47, 258
Air, Carburetting	J. A. Bassett	47, 272
Air, Carburetting	D. Hurd	47, 550
Air, Carburetting	E. Duncombe	47, 679
Air, Carburetting	F. Hainsworth	48, 391
Air, Carburetting	J. F. Birchard	48, 706
Air, Carburetting	P. Mißen	48, 772
Air, Carburetting	W. A. Simonds	49, 448
Air, Carburetting	J. H. Irwin	49, 526
Air, Carburetting	M. J. A. Mille	49, 596
Air, Carburetting	J. B. Terry	49, 934
Air, Carburetting	E. A. Pond and M. S. Richardson	50, 029
Air, Carburetting	H. L. McAvoy	50, 076
Air, Carburetting	C. M. Drennan	50, 103
Air, Carburetting	J. H. Irwin	50, 250
Air, Carburetting	J. H. Irwin	50, 251
Air, Carburetting	E. A. Pond	50, 491
Air, Carburetting	J. A. Bassett	50, 675
Air, Carburetting	J. Chase	50, 905
Air, Carburetting	J. Chase	50, 987
Air, Compressing	D. Bickford	51, 128
Air-compressing apparatus	W. Arthur	48, 686
Air, Condensed, Treating diseases by	J. S. Patrick	47, 328
Air, Cooling	O. Stone	50, 641
Air, Cooling	D. E. Somes	50, 226
Air, Cooling, in buildings and chambers	D. E. Somes	51, 237
Air-cooling apparatus	D. E. Somes	48, 456
Air, Pure, Inhaling	N. S. Shaler	47, 991
Air of rooms, Impregnating with antiseptic vapors	B. J. Laue	46, 477
Alarms, Burglar	A. J. Sax	48, 352
Alarms, Burglar	B. L. Stone	46, 402
Alarms, Burglar	A. J. Loomis	47, 841
Alarms, Burglar	B. L. Stone	51, 489
Alarms, Burglar	A. W. Deerow	51, 511
Alarms, Burglar, and clock	E. Warne	49, 940
Alarms, Fire, Signal boxes for	C. E. Carpenter	46, 542
Alarms, Fire and burglar	D. Ward and R. S. Luce	50, 863
Alarms, Fog	G. Hull	50, 004
Alarms for railroads	C. P. Mortin	47, 215
Albums	J. D. Metz	47, 120
Albums, Photographic	R. Van Velthoven and J. H. Hazard	50, 521
Albumen and prussiate of potash from blood, Manufacture of	A. H. Hirsch	51, 181
Alcol of, &c., Distillation of	A. Fries	48, 711
Alcohol, Manufacture of, Treating grain for the	W. M. Watson	51, 369
Alcohol, Purifying	C. J. Falkman	50, 884
Alcohol, Rectifying	A. A. Foubert and J. G. Bequet	46, 244
Alkaline solution, Evaporating and calcining	M. L. Keen and H. Burgess	46, 347
Alloys of aluminum with vulcanite, Construction of	N. C. Fowler	50, 430
Almanacs, Perpetual	W. Gibson	48, 681
Alphabet, Cryptographic	E. H. Hawley	46, 347
Aluminum, alloys of, with vulcanite, Combination of	N. C. Fowler	46, 230
Aluminum with vulcanite and other materials, Combining	W. Brückner	46, 875
Amalgam, Refining	W. H. Butler	49, 975
Amalgamating apparatus	C. A. Seely	47, 577
Amalgamating the precious metals	C. C. Peck	46, 492
Amalgamator	A. W. Hall	46, 560
Amalgamator	H. H. Scoville, jr.	48, 030
Amalgamator	J. B. Atwater	48, 867
Amalgamator	I. T. Halsted	48, 930
Amalgamator	T. J. Chubb	49, 232
Amalgamator	A. G. Day	50, 101
Amalgamator	H. Halvorson	50, 534

Invention or Discovery.	Name of Patentee.	No.
Amalgamator.....	P. W. Gates.....	50, 572
Amalgamator.....	M. H. Collins.....	51, 021
Amalgamator.....	C. C. Peck.....	51, 079
Ambulances.....	J. M. Hayward.....	47, 719
Ambulances.....	W. Slatter.....	47, 992
Ambulances.....	B. Howard.....	48, 404
Anchor.....	G. Coffin.....	48, 370
Anchor.....	E. Snell.....	49, 688
Anchor.....	C. E. Marshall.....	50, 542
Anchor stripper.....	B. H. Heilmann.....	47, 720
Anchor stripper.....	G. Gibson.....	51, 305
Aniline, Colors from, Preparing.....	H. Karcheskie.....	46, 804
Aniline colors for dyeing and printing, Preparing.....	A. S. L. Leonhardt.....	49, 958
Aniline red.....	C. and A. Clemm.....	50, 335
Animals, Tethering.....	W. Johnson.....	49, 681
Animal or vegetable substances, Case for preserving during transportation.....	J. G. Staunton.....	45, 764
Animal and vegetable substances, Preserving.....	F. Stabler.....	50, 965
Animal and vegetable substances, Preserving.....	R. Jones.....	51, 280
Animal yokes.....	A. W. Bishop.....	49, 071
Annunciators.....	H. Horsfall.....	50, 709
Apples, Gathering.....	E. Tyler.....	50, 859
Apples, Grinding.....	R. Butterworth.....	49, 714
Apples, Coring, slicing, and stringing.....	N. Bennett.....	46, 149
Apples, Paring, pressing beefsteak, and sharpening knives.....	B. F. Alexander.....	50, 671
Apple corer and slicer.....	S. Saucerman.....	48, 981
Apple cutter and corer.....	J. Wroten.....	50, 197
Arms, Artificial.....	I. Stoffel.....	45, 876
Arms, Artificial.....	J. Peterson.....	46, 686
Arms, Artificial.....	H. A. Kimball and A. J. Lawrence.....	.....
Arms, Artificial.....	T. Wren.....	48, 002
Arms, Artificial.....	J. Condell.....	48, 659
Arms, Artificial.....	E. Spellerburg.....	51, 238
Arms and hands, Artificial.....	T. Wren.....	46, 158
Arms and hands, Artificial.....	T. Wren.....	46, 159
Arm supporter for rifleman.....	S. Kinman.....	46, 365
Armor, Defensive, Ships.....	S. D. Carpenter.....	47, 796
Armor, Defensive, for vessels.....	C. Holyoke.....	49, 407
Ash pan, drawer, and lifter.....	J. Morrison.....	48, 299
Ash sifter.....	T. W. Brown.....	47, 615
Astronomical instruments.....	C. Emanuel.....	45, 954
Augers.....	E. C. Gillette.....	46, 854
Augers.....	C. L. Griswold.....	47, 946
Augers.....	H. T. Love.....	50, 887
Augers, Attaching, to their handles.....	H. W. Olney.....	50, 838
Augers, Ground.....	D. Ring.....	47, 172
Auger handle.....	D. T. Smith.....	58, 045
Automatic dancer.....	C. Chinnock.....	50, 452
Awls.....	R. Egan.....	47, 403
Awning.....	E. E. Laumont.....	50, 479
Awning and reflector.....	J. Corduan.....	47, 524
Axehelves.....	W. Morehouse.....	47, 214
Axles.....	H. C. Reynolds.....	49, 156
Axles, Car.....	J. W. Hard.....	47, 015
Axles, Car.....	C. P. Hewett.....	47, 723
Axles, Car.....	J. W. Clark.....	50, 796
Axles, Car, Rolling.....	T. Cooper.....	50, 458
Axles, Carriage.....	G. H. Thomas.....	48, 111
Axle box.....	J. Stephenson.....	49, 009
Axle boxes.....	C. Cook.....	49, 726
Axle box.....	E. Lockwood.....	49, 772
Axle box, Carriage.....	T. Wood.....	50, 648
Axle box, Railroad.....	S. T. Shelley.....	45, 870
Axles from iron and steel, Manufacture of.....	H. Bessemer.....	49, 054
Axles for wheel vehicles.....	J. S. Tibbets and W. M. Merriol.....	48, 114
Axles for vehicles.....	W. Beers.....	48, 895
B.		
Bags, Feed.....	H. Pennie and C. Chinnock.....	47, 498
Bags, Feed, for horses.....	A. T. Ballantine.....	47, 270
Bags, Holding and filling.....	G. E. Randall.....	48, 208
Bag, Lunch, Travelling.....	J. H. Noyes.....	47, 324
Bags, Paper.....	J. Arkell, B. and A. Smith.....	47, 376
Bags, Paper.....	B. B. Taggart.....	49, 454
Bags, Paper.....	B. F. Ellis.....	49, 736
Bags, Paper.....	E. W. Goodale.....	49, 951
Bags, Paper, Folding.....	E. A. Hollingsworth.....	45, 999
Bag fastener.....	A. C. Fletcher.....	48, 922
Bag holders.....	R. Ramsey.....	46, 498
Bag holder.....	L. W. Morlap.....	48, 083
Bag holder.....	J. S. Corbin.....	48, 911
Bag holder.....	E. Reynolds.....	51, 220
Bag mouth fastener.....	T. K. Reed.....	46, 587

Invention or Discovery.	Name of Patentes.	No.
Bag receiver, Railway.	C. D. Everett.	50, 698
Balances	H. A. Clum.	46, 992
Balances	R. Shaler.	51, 226
Balances, Spring.	W. B. Stone.	46, 592
Balances, Spring.	H. Saloshinsky.	48, 211
Balances, Spring, Safety valve.	T. S. Ray and S. E. Cleveland.	51, 350
Bale hoop strainer.	E. A. Field.	50, 925
Baling and Crushing machine.	J. Price, jr.	51, 213
Baling for packing tobacco.	J. H. Stone.	50, 047
Balls, Rounding and polishing.	J. L. Knowlton.	49, 122
Balls to cartridges, Attaching.	E. Ellis and G. R. Stetson.	48, 056
Ball screw for fire-arms.	A. De Witzleben.	46, 220
Bands, Metal, Sheet, Joining.	W. Painter.	49, 782
Bands, Sheaf, Cutting.	H. Haines.	47, 013
Bands for handles.	C. Perley.	49, 435
Bands for head screws.	N. Grant and G. Downs.	48, 677
Band cutter for threshing machines.	W. U. Hoover.	48, 279
Band cutting machines.	W. U. Hoover.	48, 280
Banjos.	F. W. Harlan.	49, 401
Bank note engraving.	W. L. Ormsby.	47, 744
Bark, Tan, Extracts from.	S. W. Pingree.	50, 626
Bark, Tan, Treating.	J. M. Callar.	48, 365
Barometers.	G. V. Money.	47, 971
Barrels, Bungs to, Securing bushes for.	T. Summerfield.	47, 677
Barrels, Filling.	H. A. Webber and C. Reifsnyder.	51, 370
Barrels, Filling.	H. A. Webber and C. Reifsnyder.	51, 371
Barrels, Heads for.	L. G. Gilliland.	48, 168
Barrels, Heads to.	J. Greenwood.	46, 661
Barrels, Lining, Composition for.	R. H. Howell.	47, 625
Barrels, Lining, Composition for.	L. Held.	48, 398
Barrels, Lining, for holding oil, &c.	J. Baur.	46, 968
Barrel, Lining, for holding petroleum, Composition for.	L. Francis.	46, 554
Barrels for containing petroleum, Composition for lining.	H. Preuss.	45, 857
Barrels, Oil, Composition for lining.	H. Loewenberg.	47, 496
Barrels, Oil, Composition for coating and other purposes.	J. G. Thompson.	46, 734
Barrels, Oil, Composition for preserving wood and.	C. Brandenburg.	46, 873
Barrels, Oil, &c., Leaking of, Preventing.	G. T. Parry and W. S. Warner.	45, 655
Barrels, Oil, Leaking of, Preventing.	D. Ahl.	45, 902
Barrels, Oil, Lining.	J. Baur.	48, 041
Barrels, Oil, Lining.	C. B. Hutchinson.	48, 625
Barrels, Oil, Lining, Composition for.	W. Budd and J. C. Husband.	46, 636
Barrels, Oil, Solutions to, Applying.	J. O. Woodruff.	50, 6
Barrels, Petroleum, Lining.	J. Fox.	47, 810
Barrels, Petroleum, Lining, Composition for.	R. Price.	49, 152
Barrels, Petroleum, Lining for.	W. H. Stone.	47, 581
Barrels, Petroleum, Lining.	T. O. Oliver.	47, 363
Barrels, Rendering impervious to petroleum.	J. Baur.	49, 215
Barrels, Vents for.	T. Simmons.	50, 176
Barrel fillers, Self closing.	H. A. Webber and C. Reifsnyder.	51, 372
Barrel head.	G. W. Gilbert.	51, 260
Barrel heads, Cutters for.	W. H. Bennett.	50, 677
Barrel heads, Cutting.	C. R. Thompson.	46, 508
Barrel heads, Securing.	J. T. Tomkins.	45, 771
Barrel machines.	A. Wykoff.	51, 643
Barrel machinery.	G. W. Pierce.	50, 625
Barrel packers.	T. Burns.	47, 253
Barrel rolling device.	H. W. Stephenson.	47, 465
Barrel for holding oil.	J. A. Bassett.	47, 273
Barrel for holding petroleum.	G. W. Williamson.	49, 202
Barrel for holding petroleum.	L. Day and U. Chapman.	50, 694
Barrel for holding petroleum, Composition for lining.	H. Loewenberg.	46, 060
Barrels to hold petroleum oil, &c., Preparing.	U. Wuriz.	46, 518
Barrels for holding petroleum and other oils.	J. Holland.	46, 539
Barrels impervious to oil, &c., Composition for rendering.	G. R. Percy.	46, 081
Barrels or casks, Hoops on, Driving.	J. A. Loomis.	49, 425
Bars, Draught, Railroad.	R. Flegel.	47, 098
Basket.	T. R. Sherry.	48, 595
Basket.	E. A. Jeffery.	48, 869
Baskets.	E. B. Lyman.	49, 774
Baskets, Flower.	G. Gunther.	48, 171
Baskets, Forming.	J. W. Millet.	47, 602
Baskets, Fruit.	W. H. Burridge.	46, 177
Baskets, Fruit.	J. S. Hoard and C. M. Miles.	47, 823
Baskets, Fruit.	J. H. Doolittle.	49, 380
Baskets, Fruit.	E. A. Jefferey.	49, 580
Baskets, Fruit.	G. Munger.	50, 486
Baskets, Fruit, or boxes.	J. H. Doolittle.	49, 866
Baskets, Manufacturing.	E. Bredt.	48, 235
Baskets, Protection for.	P. Eley.	47, 986
Basket machines.	J. B. Sweetland and E. C. Goodrich.	51, 491
Bathing apparatus.	C. Schults and T. Warker.	50, 459
Batter cap or dish.	B. Wieland.	49, 019
Batteries, Carbon, Connectors for.	C. T. Chester.	51, 144
Batteries, Galvanic.	D. J. Browne and C. W. Baldwin.	47, 389

Invention or Discovery.	Name of Patentee.	No.
Batteries, Galvanic	J. Blakie	49, 624
Batteries, Thermo-electric	M. G. Farmer and H. J. Smith	51, 442
Battery	R. J. Gatling	47, 631
Bayonet attachment	W. Hoffman	47, 303
Bayonets to fire-arms, Attaching	H. Berdan	43, 901
Bed, Crib and sofa	S. Chapin	46, 879
Bed, Invalid	R. H. Mathews	46, 569
Bed, seat, &c., Elastic supports for	J. Perry	50, 840
Bed bottom	F. G. Johnson	45, 832
Bed bottom	C. B. Tucker	47, 757
Bed bottom	C. D. Blinn	47, 789
Bed bottom	P. G. Chase	47, 797
Bed bottom	W. Workman and C. T. Swain	49, 189
Bed bottom	S. Pearson	49, 434
Bed bottom	R. L. Hall	50, 118
Bed bottom	R. S. Sanborn	50, 168
Bed bottom	P. C. Ingersoll	50, 713
Bed bottom	G. N. Seldler	50, 738
Bed bottom	F. Carrie	50, 883
Bed bottom	H. A. Cooke	51, 427
Bed bottom	M. C. Cronk	51, 429
Bed bottom	C. H. Sawyer	51, 624
Bed bottom, Spring	G. E. Lord	46, 119
Bed bottom, Spring	J. B. Bowditch	47, 086
Bed bottom, Spring	S. P. Kittle	51, 061
Bed bottom, Spring slat for	J. M. French	51, 443
Bed clothes retainer, Children's	M. L. Thompson	51, 270
Bed plate for paper mill engines	O. Morse	47, 849
Bedsteads	A. Luke	49, 412
Bedstead	A. Stark	49, 568
Bedstead	J. P. Dorman	50, 920
Bedstead, Camp	C. Postensen, H. Iverson, and C. J. Skow	48, 671
Bedstead, Folding	J. H. Durand	50, 300
Bedstead, Sofa	E. Brady	47, 512
Bedstead, Sofa, Extension	J. Kena	50, 939
Bedstead, Spring	W. Woods and E. Smith	47, 564
Bedstead, Wardrobe	J. Eby	47, 197
Bedstead bottom	G. Schott	51, 755
Bedstead fastening	J. C. Santee	46, 029
Beefsteak crusher	J. J. Doyle	50, 921
Beehives	O. P. Reeve	45, 859
Beehives	J. Harper	46, 467
Beehives	H. Penoyer	46, 564
Beehives	O. Sprague	47, 047
Beehives	W. Henschen	47, 169
Beehives	D. S. Gray	48, 768
Beehives	T. Burris	49, 375
Beehives	A. J. Smith	49, 563
Beehives	G. Spinnny	50, 179
Beehives	H. A. and N. H. King and F. S. Walker	50, 367
Beehives	D. Herman	51, 315
Beehives	G. Defenbaugh	51, 566
Beehives	J. H. Hendricks	51, 716
Beehives, Swarm indicators for	W. W. Snell	50, 639
Bee separator	J. H. Starr	49, 314
Beer, Cooling	J. Hoefler	47, 823
Beer, Making	E. J. Krause	48, 413
Beer, &c., Preserving, Casks for	J. Hæge	45, 994
Beer and other liquids, Coolers for	C. W. Cunningham	48, 791
Beer and other liquids, Preserving	T. Byrne	50, 085
Bells, Door	A. Turnbull	48, 249
Bells, Door	C. S. Nickelson	50, 616
Bells, Door, or gong	A. G. Dexter	48, 234
Bells, Door, or gong	H. H. Abbe	48, 637
Bells, Sleigh, Attaching them to straps	W. E. Barton	46, 023
Bells, Dumb, Graduated	G. B. Winship	46, 413
Bell pull	U. Homer	49, 757
Bellows	G. W. Dalbey	50, 918
Bellows, Paper	M. P. Dorsch	46, 340
Belt clasp	A. D. Ansell	48, 784
Belt clasp	J. N. Plotts	50, 841
Belt coupling	C. G. Rathburn and A. M. Comstock	46, 264
Belt coupling	M. W. Costolo	51, 561
Belts together, Drawing	E. F. Miller and B. Gardner	50, 609
Bench, Moulder's	C. L. Bishop	46, 209
Bench or folding table	R. Carter, Jr.	49, 500
Benzole, petroleum, &c., Deodorizing	J. Green	46, 794
Bureaus and commode	G. W. Kock	49, 766
Berths, Movable	N. W. Wheeler	47, 421
Bevelling picture-frames	O. F. Bedell	49, 965
Beverage	A. Cochard	46, 081
Beverage	O. C. Howell	48, 405

Invention or Discovery.	Name of Patentee.	No.
Bell-holder	C. T. Wakeley	46, 282
Billard balls	J. W. Hyatt, jr.	50, 559
Billard indicators	R. Schmits	45, 868
Billard tables, Pockets to, Attaching	L. Peterson	46, 136
Binding for India-rubber fabrics	C. A. Ensign	51, 161
Bismarck	E. S. Ritchie	48, 443
Bismarck	C. C. Brown	50, 330
Bismarck	E. Day	51, 151
Bismarck	W. W. Grier and R. H. Boyd	47, 812
Bismarck	C. Perley	46, 135
Bismarck	M. V. Nobles	51, 680
Bismarck	M. V. Nobles	48, 346
Bismarck	C. H. Amidon	50, 214
Bismarck	C. E. Lombard	50, 480
Bismarck	D. W. Goodell	51, 173
Bismarck	O. Hillman	47, 204
Bismarck	A. Tomlinson	50, 780
Bismarck, &c., Manufacture of	R. Bartholow	47, 082
Bismarck, Water-proof	D. L. Pickard	50, 383
Bismarck-box holder	C. E. S. Jelliffe	49, 115
Blanket, Printers	J. Taylor	49, 804
Blankets of printing machines, Washing	T. W. Clark	48, 053
Blast apparatus, Hot	R. Denholm	49, 862
Blasting plug	C. Monson	50, 263
Blasting rock	G. C. Bunsen	47, 925
Blasting by electricity	T. P. Shaffner	51, 671
Blasting by electricity	T. P. Shaffner	51, 674
Bleaching powder, chlorine, carbonate of soda, and other products, Preparing	F. McFarlane	49, 597
Blinks, Enamelled, for windows	T. J. Olaver and W. P. Elliott	51, 345
Blinks, Venetian, for windows	C. D. Blinn	51, 131
Blinks, Window	O. Van Wageningen	48, 116
Blinks, Window	J. C. Reed	51, 268
Blinks, Window, Locking and stopping	J. Wetzel	48, 003
Blink-fastener	G. K. Dearborn	50, 532
Blink-fastener	D. B. Randall	50, 775
Blink-fastening	S. Hall	47, 816
Blink-fastening	L. V. Quimby and W. G. Marston	50, 733
Blink-rods, Window, Wiring	D. Kelley	49, 888
Blood, Albumen and prussiate of potash from	A. H. Hirsch	51, 181
Blotter	C. C. Moore	51, 337
Blotter, paper weight, rule, cutter, and square, Combination of	A. H. Trego	50, 404
Blowers, Fan	R. Porter	45, 749
Blowers, Hydrocarbon, for furnaces of steam boilers	H. Gerner	48, 606
Blowers, Steam	J. W. Stevens	48, 650
Blowers for steam generators	D. M. Nichols	50, 265
Blowpipe	J. Hendy	47, 781
Blowpipe or gas-heater for heating soldering-irons	E. A. Leland	46, 537
Blue, Prussian, Manufacture of	J. M. Merryman	45, 646
Boats, Ferry, Trains for	N. W. Wheeler	47, 479
Boats, Flat-bottom, Construction of	H. Haupt and J. Y. Smith	48, 935
Boats, Gun, Construction of	S. D. Carpenter	46, 074
Boat, Life	A. L. Shears	49, 197
Boats, Sectional folding	J. H. Laning and V. Fletcher	48, 342
Boats, Steam, Propulsion of	A. Fellows	47, 003
Boats, Steering from another	J. D. Willoughby	48, 124
Boats, Torpedo	G. M. Ramsey	49, 300
Boats, Trains of, Attachment	W. Ingalls	45, 720
Boats, waterproofing, roofing, tubing tanks, and other structures, Material for	J. K. Mayo	51, 735
Boat machine	H. M. Phillips	50, 028
Boat-pin or rigged oar	R. Smith	49, 930
Bobbin, Sewing-machine, Winding	A. W. Todd	46, 955
Bobbin-holder for spinning	J. Goulding	50, 240
Bobbin-holder for spinning	J. Goulding	50, 241
Bobbin-holder for spinning	E. Wright	50, 311
Bobbins in shuttles, Securing	S. C. Mendenhall	49, 643
Boiler, Coffee, Alarm	E. K. Sargeant	50, 169
Boiler, Composition for removing scales from	J. Busby	47, 188
Boiler, Egg	P. Malapert and E. A. Des Courts	50, 689
Boiler, Furnace-doors for	J. Penketh	46, 423
Boiler, Fusible plugs for	J. Smith	47, 076
Boilers, Grate-bars for	E. Thayer	47, 052
Boilers, Incrustations in, Removing	D. Embree	45, 914
Boilers, Incrustations in, Removing	J. C. Ganes and J. J. Lava	50, 237
Boilers, Incrustations in, Preventing	G. R. Spannagel	49, 931
Boilers, Incrustations in, Preventing and removing	A. Temple	49, 589
Boilers, Iron, Cast	J. A. Miller	50, 611
Boilers, Locomotive	S. Crawford	49, 226
Boilers, Metal, Sheet	A. Neill	50, 546
Boiler, Range, Kitchen	J. H. Ash	47, 783
Boilers, Rotary, for the manufacture of paper-pulp	H. B. Meech	45, 845
Boilers, Scale from, Compound for removing	A. B. Auer	47, 914

Invention or Discovery.	Name of Patentee.	No.
Boilers, Sealing tubes to, Tools for.....	J. H. Marvill.....	46, 339
Boilers, Steam.....	J. C. Neill.....	45, 739

Brakes, Car	W. L. Burt	49, 082
Brakes, Car	S. R. Dimmock	49, 243
Brakes, Car	W. W. Todd and J. Vandercar	50, 051
Brakes, Car	H. H. Trenor	50, 517
Brakes, Car	L. McCambridge	51, 204
Brakes, Car, Automatic	J. Hartman, Jr.	51, 715
Brakes, Car, Block for	B. DeVont	51, 298
Brakes, Car, Railroad	J. H. Champlin	45, 975
Brakes, Car, Railroad	J. W. Latcher	46, 366
Brakes, Car, Railroad	D. L. Cross	47, 091
Brakes, Car, Railroad	A. F. M. Crone	47, 440
Brakes, Car, Railroad	E. E. Canda	47, 700
Brakes, Car, Railroad	J. Jones	49, 885
Brakes, Car, Shoe for	O. H. Sollers and J. Rhoades	51, 093
Brakes, Collision	C. B. Guy	46, 662
Brakes, Safety, for horse powers	J. C. Bird	45, 959
Brakes, Self-acting	C. A. Smith	51, 232
Brakes, Steam, for railroad cars	S. N. Goodale	47, 943
Brakes, Wagon	F. L. Tripp	46, 834
Brakes, Wagon	W. Glase	48, 169
Brakes, Wagon	N. Lezat	49, 771
Brakes, Wagon	A. B. Mattoon	50, 145
Brakes, Wagon	J. F. Wilson	50, 762
Brakes, Wagon	G. and W. Burch	51, 684
Brakes, Wagon and Carriage	L. R. Carpenter	45, 699
Brakes for carts	H. Holcroft and C. S. Smith	50, 248
Brakes for horse-powers	W. F. Rundell	50, 277
Brake shoes, Car	S. D. Danfield	50, 656
Brazing brass screws to iron pipes	W. B. Scaffo	46, 395
Bread, Aerated	J. Daughlish	48, 534
Bread, Manufacture of	J. G. Moxey	51, 659
Bread-slicer	G. Hall	47, 716
Break, Sled	L. H. Thomas	49, 173
Breast pads, Ladies'	J. A. Mason	45, 843
Breech-strap fastening	A. W. Olds	49, 143
Breweries, Cooler for	A. Hammer	47, 298
Brewers, Mash-tun for	B. G. Martin	51, 518
Brewing, Process for	A. Hammer	47, 114
Brewing and distilling, Closing and condensing apparatus used in	D. E. Somes	46, 594
Bricks, Making	J. F. Schuffenecker	46, 273
Bricks, Moulding and pressing	J. Treadway	46, 956
Bricks, Pressing	J. K. Lemon	47, 209
Bricks, Pressing	M. Chittenden	50, 333
Bricks, Scouring	J. Valentine	50, 862
Brick kiln, Circular	F. E. Hoffman	48, 244
Brick machine	J. Ward	46, 055
Brick machine	W. A. Horsall	46, 188
Brick machine	J. T. Smith	46, 399
Brick machine	J. George	46, 845
Brick machine	H. Martin	48, 419
Brick machine	C. P. H. Capron	49, 376
Brick machine	J. Morley	49, 430
Brick machine	S. Shreffler	49, 562
Brick machine	J. Gregg	50, 070
Brick machine, Duster for	J. Hotchkiss and E. Bus	51, 050
Brick and tile machine	C. Chambers, Jr.	45, 974
Bridges	B. F. St. John and H. Horst	50, 508
Bridges	J. Boles, Jr.	47, 990
Bridges	J. Boles, Jr.	48, 013
Bridges	J. E. Kanwer	50, 827
Bridges	R. Lockwood	51, 268
Bridges, Iron, Wrought	J. H. Linville and J. L. Piper	50, 723
Bridges, Trestle	A. Derrom	48, 530
Bridges, Trusses for	W. Batchelder	48, 645
Bridles	S. B. Hartman	50, 822
Broiler and toaster	T. C. Law	51, 064
Broiler or toaster, Wire	H. A. Hildreth and W. J. Johnson	47, 302
Broom	O. W. Kellogg	46, 678
Broom	J. M. Clark	47, 799
Broom	J. H. Mumma	51, 074
Broom	J. and G. Bacon	51, 127
Broom	D. Young	51, 252
Broom and brush	M. L. Byrne	51, 423
Broom or brush bend	J. E. Phillips	48, 587
Broom and mop head	E. J. Green	50, 353
Broom clasp	S. Parr	51, 614
Broom head	C. E. Miller	48, 195
Broom head	F. C. Bolender	48, 232
Broom head	C. B. Hand	48, 392
Broom head	T. H. Powers	48, 434
Broom head	J. D. Browne	50, 554
Broom head	J. A. Miller	52, 610

Invention or Discovery.	Name of Patentee.	No.
Broom head	J. Buchanan	51, 013
Broom head	G. W. Hoffman	51, 318
Broom head	S. D. Thurston	51, 631
Broom head	C. E. Miller	51, 658
Broom head	A. Silvers	51, 663
Broom head	D. J. Brougher	51, 689
Brush	A. M. White	47, 157
Brush	A. Alden	47, 781
Brush	A. Van Dusen	49, 457
Brush, Dusting	C. M. Moody	47, 318
Brush, Fly, for tables	H. Fisher	50, 926
Brush, Hair	J. Mayer	48, 295
Brush, Hydraulic	T. Welham	46, 167
Brush, Mucilage and marking	E. H. Boswell	49, 072
Brush, Paint	L. P. Faught	50, 067
Brush, Whitewash	W. R. Burnett and J. P. McIntosh	45, 907
Brush, Whitewash, Handles to, Attaching	W. R. Burnett and J. P. McIntosh	50, 449
Brush, Whitewash, and handle attachment	W. B. Burnett and J. P. McIntosh	47, 927
Brush and broom	M. L. Payne	51, 423
Brush or broom head	J. E. Phillips	48, 587
Brush and dust pan	C. H. Parker and G. Burnham	48, 592
Brush and dust pan	C. H. Parker and G. Burnham	50, 270
Brush for cannon	P. Birchmeyer	46, 441
Brush for cleaning metallic plates	E. A. Harvey	49, 755
Brush mop, Scrubbing and wringer	L. Frey and J. Hahn	50, 701
Brushing hair, Barbers' apparatus for	C. P. Kroll	49, 833
Bucket, Elevator	J. Magee	51, 603
Bucket, Folding	H. W. Wilcox	46, 168
Buckets, Weighing	D. D. Stell	45, 873
Bucket ear	L. Rowland	47, 573
Buckles	J. Barrister	46, 324
Buckles	J. Barier	46, 326
Buckles	C. Sears and T. Townsend	46, 948
Buckles	C. E. Woodman and C. B. Hatfield	47, 159
Buckle	J. E. Smith	48, 135
Buckle	C. B. Hatfield	48, 236
Buckle	D. L. Smith	48, 241
Buckle	T. G. Bailey	48, 503
Buckle	B. S. Lawson	48, 589
Buckle	P. White	48, 610
Buckle	W. L. Hall	49, 261
Buckle	C. W. Saladee	49, 309
Buckle	A. H. Cole	50, 337
Buckle	N. Post	50, 396
Buckle	H. Aschenbach	50, 673
Buckle	C. B. Hatfield	50, 706
Buckle	J. Stanbrough	50, 852
Buckle	C. S. Stearns and T. Corey	50, 992
Buckle	J. Peabody	51, 210
Buckle	S. P. Mitchell	51, 606
Buckle	G. O. Monroe	51, 740
Buckle, Belt	F. and C. Lemme	47, 556
Buckle, Harness	C. W. Saladee	47, 574
Buckle, Harness	S. E. Taylor and R. Tatterhall	51, 367
Buckle, Lever	L. A. Sprague	46, 719
Buckle, Lever	H. W. Warner	48, 121
Buckle, Loops to, Attaching	L. C. Chase	48, 153
Buckles, Shoe	J. Ellerman	50, 345
Buckles, Trace	W. Wykoff	49, 580
Buckles, Trace	D. F. Maine	50, 017
Buckles, Trace	H. S. Woodruff	50, 979
Buckles, Tug	C. D. W. Rice	47, 570
Buckle attachment	W. E. Barton	48, 039
Buckle fastening	W. Wiley, jr.	50, 195
Buffer and coupling, Car	E. Miller	46, 126
Buildings, Heating	H. Richardson	47, 569
Buildings, Moving	J. S. McIntire	50, 375
Buildings, Removing	J. S. McIntire	49, 427
Buildings, Siding and covering with wood	H. B. Adams	50, 784
Buildings, Staging for	W. Arronqueler	47, 179
Building block, Artificial	G. E. Van Derburgh	48, 744
Building block, Silicated	G. E. Van Derburgh	48, 745
Buildings of every description, Cooling and ventilating	D. E. Somes	46, 596
Buildings or rooms for the preservation of food and for other purposes	D. E. Somes	46, 276
Buildings and granaries, Cooling, drying, and ventilating	D. E. Somes	46, 950
Buildings for preserving milk, fruit, &c.	N. W. Clark	49, 604
Bulkheads, Piers and	S. J. Seeley	46, 144
Bullets, Lubricating	A. Ball	47, 784
Bullets for rifled fire-arms	W. Roscoe	47, 792
Bumper, Car, Attachment for	J. P. Laird	46, 248
Bungs	O. R. Burnham	51, 422
Bungs for barrels	C. A. Neuhaus	48, 427
Bungs for barrels and other vessels	A. G. Day	48, 377

Invention or Discovery.	Name of Patentee.	No.
Bags to barrels, Securing bushes for.....	T. Summerfield.....	47, 817
Bags for casks.....	M. Hickey.....	49, 473
Burners, Aero-vapor.....	W. Bryant.....	51, 011

Coffee-dam	A. Folsom	46, 096
Coffin	T. Graham	47, 414
Coffins, Deodorizing	A. E. Lyman	47, 313
Coffin, Wooden	M. R. Margerum	50, 144
Coffin handles	L. Almy	47, 375
Coffin handles	A. Clark	51, 693
Coffin handles	D. W. Sexton	48, 215
Coffin lids	J. C. Seely	48, 842
Coils for steam-heating apparatus	J. Trageser	49, 509
Collar, Horse	S. B. Edson	47, 000
Collars, Horse	C. J. Fisher	49, 743
Collars, Horse	A. M. Stannard	50, 505
Collars, Horse	T. W. Murphy	51, 341
Collars, Horse, Fastening for	H. H. Fleming	51, 033
Collars, Horse, and Hames	M. Killacky	46, 606
Collars, Metallic	L. Billon	49, 702
Collars, Paper	W. S. Bell, jr.	46, 332
Collars, Paper	W. L. Duff	48, 016
Collars, Paper	W. S. Bell, jr.	48, 146
Collars, Paper	G. F. Bigelow	46, 359
Collars, Paper	S. B. Hutchinson	49, 347
Collars, Paper	S. C. Shaw	50, 663
Collars, Paper	D. M. Smith	51, 361
Collars, Paper, cards, &c., Removing from embossing press	T. Tebbetts	50, 514
Collars, Paper, Enamelled	J. H. Hoffman	48, 996
Collars, Paper, Forming	H. Bell	46, 291
Collars, Paper, Folding	A. H. Cook	46, 669
Collars, Paper, Folding	E. Vossnack	50, 496
Collars, Paper, Ladies	S. S. Gray	46, 823
Collars, Paper, Machines for making	S. Shepherd and A. M. George	49, 927

Invention or Discovery.	Name of Patentee.	No.
Collar, Paper, Machines for making	G. K. Snow	51, 233
Collars, Paper, Machines for making	G. K. Snow	51, 234
Collars, Paper, Shaping	W. E. Lockwood and H. Howson	49, 952
Collars, Paper, Shirt	G. K. Snow	46, 310
Collars, Paper, Stretching	C. Spofford and W. S. Bell	46, 400
Collars, Paper, Sweat-proof	J. H. Hoffman	47, 107
Collars, Shirt	A. A. Evans	48, 802
Collars and bosoms	C. E. Richards	49, 039
Collars and cuffs	G. W. Ray	48, 239
Collars and cuffs, Manufacture of	A. Taylor	50, 513
Collars and cuffs, Water-proof	G. W. Ray	48, 239
Colors from aniline, Preparing	H. Kurcheskie	46, 504
Colors and dyes, Preparation and manufacture of	J. H. Keed	50, 495
Coloring matter	J. Holliday	51, 404
Coloring matter for dyers, Preparing	J. Eberhardt	46, 888
Combs	G. F. J. Colburn	45, 909
Combs	G. F. J. Colburn	46, 082
Combs	I. H. Southworth	50, 400
Combs, Curry	C. W. Saladee	46, 710
Combs for combing wool, flax, cotton, &c.	J. B. Siccardi and J. Hyde	46, 397
Combustion, Supporting	J. A. Bassett and E. L. Norfolk	46, 624
Commode and bureau	G. W. Kock	49, 766
Compass	P. Roessler	50, 037
Compass, Azimuth	E. S. Ritchie	49, 157
Compass, Determining the variation of the	E. S. Ritchie	45, 753
Compass, level, square, and plumb-stuff, Combined	J. R. Abbott	51, 675
Compass, Liquid	E. Blunt	51, 290
Composition, Deodorizing	A. Rankin	51, 216
Composition, Fire-proof	N. E. Blake	47, 275
Composition for coating oil barrels, and for other purposes	J. G. Thompson	46, 734
Composition for lining oil barrels	H. Loewenberg	47, 496
Composition for lining barrels, &c., for containing petroleum	H. Preuss	45, 857
Composition for lining barrels for petroleum	L. Francis	46, 554
Composition for rendering barrels impervious to oil, &c.	G. R. Perry	46, 021
Compound, Fulminating	H. B. Stockwell	48, 480
Compound, Incendiary	H. W. Libbey	48, 187
Compound, Medical	A. P. Coryell	46, 449
Compound, Medical	J. Thurmon	47, 140
Compound, Medical	L. Shults	47, 750
Condensers	J. M. Spiegel	45, 941
Condensers	W. A. Lighthall	46, 254
Condensers	A. C. Fletcher	48, 710
Condensers	T. Collins	49, 855
Condensers, Tubular	W. A. Lighthall	46, 117
Condensers, Tubular	N. W. Wheeler	47, 480
Condenser cases	W. A. Lighthall	46, 253
Condensers and refrigerators	W. A. Lighthall	46, 368
Condensing and cooling apparatus used in brewing and distilling	D. E. Somes	46, 584
Conductors, Water, Cut-off for	J. Ash	49, 960
Cooking, washing, &c., apparatus	S. S. Fitch	51, 164
Cooking apparatus	J. Zimmerman	47, 675
Cooking apparatus, Steam	A. F. W. Neynaber	51, 208
Cooler, Beer	F. Uhrland	50, 055
Cooler, Beer	G. Waters	50, 056
Cooler, Fire	H. Bloedel	51, 685
Cooler, Liquid	C. P. Zimmerman	51, 275
Cooler, Soda-water, and draught pedestal	G. T. Palmer	46, 561
Cooler for breweries	A. Hammer	47, 298
Cooler, Beer, and other liquids	J. Chollar and C. W. Cunningham	48, 791
Cooler for brewers	C. R. M. Wall	49, 573
Cooler and filter	W. P. Dickinson	51, 703
Cooler and filter combined	L. Scharff	51, 485
Cooling, heating and ventilating	D. E. Somes	51, 236
Cooling, preserving and packing houses, refrigerators and other similar structures	D. E. Somes	46, 585
Cooling soda-water, &c.	E. Bigelow	51, 130
Cooling water in wells	D. E. Somes	50, 399
Cooling and condensing apparatus used in brewing and distilling	D. E. Somes	46, 584
Cooling and ventilating dwellings, chambers, hospitals, theatres, and other buildings	D. E. Somes	46, 586
Cooling and ventilating ships and other vessels	D. E. Somes	46, 593
Cooling and stirring, Apparatus for	A. G. Knappa	46, 476
Cords, braids, &c., Starching and glazing	D. McInroy	51, 471
Cords, Covering	J. Buser	49, 825
Cords, ropes, &c., Making	J. O. Mathieu	46, 057
Cords for window sash	S. Wales	50, 405
Cord-tightener for window curtains	M. Hey	51, 045
Cores, Moulding	J. P. Davis	47, 937
Cover for casting, Making and ventilating	J. Harrison, Jr.	49, 064
Cork, Article of	E. L. Perry and E. D. Lazell	49, 916
Cork, Artificial	L. Bock and A. T. Wheeler	49, 220
Corks, Cutting	P. Hayden	51, 587

Invention or Discovery.	Name of Patentee.	No.
Corks, Slicing .....	J. Power .....	49, 299
Cork machines .....	H. Boardman .....	49, 971
Cork pull .....	F. G. Biefield and C. E. E. Schwartz .....	47, 161
Corn-borer for stacking corn .....	L. S. Barker .....	51, 540
Corn huskers .....	E. F. French .....	47, 710
Corn husker, sheller, and cleaner .....	C. J. Legg .....	49, 077
Corn husking .....	J. M. Hubbard .....	57, 598
Corn sheller .....	D. Hutchinson .....	45, 924
Corn sheller .....	P. Sweeny .....	46, 155
Corn sheller .....	G. Ketchum .....	46, 245
Corn sheller .....	J. Brinkerhoff .....	46, 540
Corn sheller .....	J. H. Schroeder .....	47, 968
Corn sheller .....	G. W. Flitts .....	48, 670
Corn sheller .....	J. W. Ricker and T. S. Lewis .....	49, 303
Corn sheller, Feeding corn to .....	H. F. and G. F. Shaw .....	50, 740
Corn-stalks in the ground, Cutting .....	H. C. Robinson .....	45, 862
Corsets .....	T. W. McDill .....	48, 704
Corsets .....	L. Schreiber .....	49, 925
Corsets .....	C. Preston .....	47, 856
Corset clasp .....	J. Bowers .....	48, 045
Cotton, &c., Combing .....	R. W., D. G., and H. E. Fowler .....	50, 524
Cotton, Gun .....	I. Dimock .....	49, 865
Cotton, Gun .....	J. J. Revy .....	50, 082
Cotton, Gun, and lint .....	J. J. Revy .....	50, 083
Cotton, linen, &c., Dyeing and printing .....	J. P. McLane .....	47, 316
Cotton-bale raft .....	A. Parof .....	50, 885
Cotton chopper, cultivator, and drill .....	T. Bryne .....	51, 140
Cotton gins .....	J. A. Hall .....	49, 104
Cotton gins .....	W. B. Emory .....	47, 626
Cotton gins .....	F. Durand .....	50, 080
Cotton gins .....	C. Brakell .....	51, 402
Cotton gins, Roller for .....	I. F. Brown .....	45, 695
Cotton-seed planter .....	I. Myers and M. D. Wellman .....	46, 132
Couplings .....	W. N. Abbott .....	46, 603
Coupling .....	G. E. Clark .....	51, 695
Coupling, Car .....	L. Moody .....	45, 733
Coupling, Car .....	M. Rinehart .....	45, 939
Coupling, Car .....	C. Clinton .....	46, 336
Coupling, Car .....	P. J. Gross .....	46, 465
Coupling, Car .....	F. M. Gifford .....	46, 656
Coupling, Car .....	T. Tripp .....	46, 958
Coupling, Car .....	E. P. Howland .....	47, 108
Coupling, Car .....	J. H. Reed .....	47, 455
Coupling, Car .....	H. M. Rulon .....	47, 985
Coupling, Car .....	G. C. Lawton .....	48, 076
Coupling, Car .....	W. C. Clark .....	48, 617
Coupling, Car .....	S. S. Chaney .....	48, 656
Coupling, Car .....	J. W. Boughton .....	48, 787
Coupling, Car .....	W. C. Morse .....	49, 292
Coupling, Car .....	S. D. Locke .....	49, 348
Coupling, Car .....	J. Couch .....	49, 385
Coupling, Car .....	J. G. W. Coolidge .....	49, 676
Coupling, Car .....	A. J. Hobbs .....	49, 879
Coupling, Car .....	J. Lacey and G. Watkins .....	50, 010
Coupling, Car .....	A. Melet and J. T. Fry .....	50, 148
Coupling, Car .....	L. Moody .....	50, 152
Coupling, Car .....	G. G. Campbell .....	50, 559
Coupling, Car .....	S. A. Corser .....	50, 797
Coupling, Car .....	H. H. Flemming .....	50, 811
Coupling, Car .....	H. S. Shepardon .....	50, 883
Coupling, Car .....	E. W. Wilson and J. E. Erwin .....	50, 994
Coupling, Car .....	A. G. Page .....	51, 209
Coupling, Car .....	A. S. Markham .....	51, 330
Coupling, Car .....	G. L. Kison .....	51, 461
Coupling, Car .....	T. Arndt .....	51, 535
Coupling, Car .....	L. Moody .....	51, 608
Coupling, Car, Railroad .....	H. J. Gilman .....	48, 926
Coupling, Car, Railway .....	A. Roll .....	51, 223
Coupling, Gas-pipe .....	D. L. Freeborn .....	50, 111
Coupling, Pipe .....	A. E. Barnard .....	48, 038
Coupling, Pipe .....	J. Chamber .....	48, 517
Coupling, Pipe .....	A. M. George .....	48, 674
Coupling, Pipe .....	C. W. Emery .....	48, 709
Coupling, Pipe .....	W. Dutemple .....	48, 797
Coupling, Pipe .....	J. Old .....	49, 142
Coupling, Pipe .....	J. Old .....	50, 619
Coupling, Railway .....	D. H. Hise .....	45, 713
Coupling, Rod, Connecting .....	H. S. Dodge .....	51, 512
Coupling, Thill .....	H. K. Waterhouse .....	50, 189
Coupling, Thill .....	J. W. Innis .....	51, 457
Coupling for carriages .....	J. Bundy .....	48, 653
Coupling conducting wire .....	G. W. Beardslee .....	47, 919
Coupling for drill or pump rods .....	J. R. Cross .....	49, 386

Invention or Discovery.	Name of Patentee.	No.
Coupling for railroad cars .....	J. R. Hill .....	50, 824
Coupling shaft .....	G. H. Fox .....	50, 700
Coupling shaft for carriages .....	F. B. Morse .....	47, 154
Coupling shaft, Jack for .....	A. J. Settle .....	48, 984
Coupling shaft for boring tools .....	J. N. Bolles .....	47, 613
Coupling shaft of boring tools .....	J. Esler .....	48, 667
Coupling shaft for boring tools .....	R. H. Lecky .....	47, 535
Coupling shaft of boring tools .....	J. Watson .....	50, 190
Coupling shaft of boring tools .....	E. Kayler .....	50, 138
Coupling shaft of boring tools .....	A. A. Wilson .....	47, 907
Coupling shaft of boring tools .....	D. G. Copplin .....	48, 793
Coupling shaft of boring tools .....	R. H. Lecky .....	47, 554
Coupling shaft of boring tools .....	J. B. Stockton .....	50, 287
Coupling shaft for clutch pulleys .....	E. O. Potter .....	51, 619
Coupling for shafting, &c. ....	R. Briggs .....	47, 388
Coupling spring, Gum elastic .....	S. M. Hoover .....	47, 305
Coupling for thills .....	E. D. Clapp .....	47, 520
Coupling tools for drilling .....	J. and R. Moore .....	47, 031
Coupling and buffer, Car .....	E. Miller .....	46, 126
Coupling and chair, Railroad .....	W. Hendershott .....	47, 820
Cradle, Self-rocking .....	H. G. Williams .....	48, 744
Cradle and chair .....	G. W. Hawk .....	47, 542
Cradle and crib .....	H. H. Eastman .....	46, 091
Cranberry gatherer .....	G. Shove .....	46, 760
Cranberry gatherer .....	C. Thacher .....	48, 136
Cranes .....	B. J. Burnett .....	46, 213
Cranes, Elevating .....	J. T. Wright .....	49, 579
Crank to machinery, Attaching .....	A. Westcott .....	47, 885
Crank-pin boxes .....	T. Welch .....	49, 185
Crank, wrist connections .....	J. Clayton .....	47, 522
Crib, Bed, and sofa .....	S. Chapin .....	46, 879
Crib and cradle .....	H. W. Eastman .....	46, 091
Crimping machine, Boot .....	J. S. Landes .....	46, 427
Crimping and shoeing forms .....	J. H. Jillion .....	50, 074
Croquet mallets .....	L. Byrnes .....	51, 016
Crucible .....	G. Nimmo .....	49, 141
Crucible, Drying and preparing .....	G. Nimmo .....	48, 713
Crucible, Moulding .....	G. Nimmo .....	49, 140
Crucible for metallic baths .....	B. S. Stokes .....	49, 009
Crupper .....	F. Howe .....	47, 953
Crusher, Clod .....	W. Fenstermacher .....	45, 705
Crushing machines .....	A. Hitchcock .....	50, 247
Crushing and baling machine .....	J. Price, Jr. ....	51, 212
Crutches .....	T. E. Gordon .....	45, 709
Crutches .....	G. F. Alamy and J. G. Bugbee .....	47, 265
Crutches .....	A. Bickel .....	47, 695
Crutches .....	G. T. Alamy and J. G. Bugbee .....	51, 677
Crutch-pot, Revolving .....	J. G. Bugbee .....	49, 371
Cryptographic alphabet .....	E. H. Hawley .....	48, 681
Cuffs, collars, &c. Manufacture of .....	A. Taylor .....	50, 513
Culinary and household operations, Facilitating .....	H. S. Shepardson .....	50, 779
Cultivating land by steam .....	J. Fowler, Jr. ....	45, 892

Cutter, Cake, and rolling-pin.....	I. M. Pyle ..	50, 732
Cutter, Cheese curd.....	H. Keeney ..	49, 631
Cutter, Curd.....	C. Wadsworth ..	50, 290
Cutter, Leather shoestring.....	J. A. Safford ..	47, 340
Cutter, Meat.....	J. G. Perry ..	45, 744
Cutter, Meat.....	W. G. Bell ..	45, 788
Cutter, Meat.....	Le Roy S. Starrett ..	47, 875
Cutter, Meat.....	R. V. Jones ..	49, 762
Cutter, Meat.....	D. Bearyl ..	50, 984
Cutter, rule, square, blotter, and paper, Combination of.....	A. H. Trego ..	50, 404
Cutter, Sod.....	W. A. L. Kirk ..	45, 926
Cutter, Stalk, and seed sower, Combined.....	B. A. Grant ..	49, 997
Cutter, Straw.....	J. C. Kennedy ..	45, 925
Cutter, Straw.....	C. R. Hewett ..	45, 997
Cutter, Straw.....	J. R. Whittemore ..	46, 639
Cutter, Straw.....	E. F. Holloway ..	48, 403
Cutter, Straw.....	B. Spencer ..	48, 597
Cutter, Straw.....	J. Brockway ..	48, 649
Cutter, Straw.....	G. T. Wright ..	49, 190
Cutter, Straw.....	J. McMahon ..	49, 478
Cutter, Straw.....	W. D. Schooley ..	49, 534
Cutter, Straw.....	D. S. Kahler ..	50, 366
Cutter, Straw, and feed mixer, Combined.....	R. Leggett and R. Glittus ..	51, 116
Cutter, Tube sheet.....	E. F. Bishop ..	47, 386
Cutter, Vegetable.....	D. E. Rice and W. Evered ..	47, 983
Cutter, Vegetable.....	F. Hüllhorst ..	46, 002
Cutter, Vegetable.....	J. Caldwell ..	49, 499
Cutter, Vegetable.....	A. T. Bieley ..	50, 679
Cutter stock.....	J. Pease ..	45, 742
Cutter for barrel heads.....	W. H. Bennett ..	50, 677
Cutter for bread, meat, &c.....	D. Campbell ..	48, 014
Cutter bars for harvesting machines.....	G. G. Taylor ..	45, 679
Cutter for stone channelling machinery.....	G. J. Wardwell ..	51, 273
Cutter for wood-turning lathes.....	J. Shannon ..	49, 161
Cutter and corer, Apple.....	J. Wroten ..	50, 197
Cutting cornstalks on the ground.....	T. W. McDill ..	48, 704
Cutting machine, Band.....	W. U. Hoover ..	48, 280
Cutting stalks.....	J. B. Ryder ..	48, 312
Cutting stalks and stubble in fields preparatory to ploughing.....	G. W. Wilson ..	51, 507
Cutting tool, Screw-thread.....	C. Dreher ..	50, 806
Cutting wood gear.....	C. R. James ..	49, 681
Cylinders, Carding, Cleaning.....	A. A. Hawley ..	49, 679
Cylinders, Picking, of machines for disintegrating fibrous materials.....	S. Boyden ..	46, 294
Cylinders of tool-burring and similar machines.....	C. L. Goddard ..	49, 625
D.		
Dam, Coffor.....	A. Folsom ..	46, 098
Damper.....	N. R. Ramsey ..	48, 491
Damper.....	J. Knickerbocker ..	48, 695
Damper.....	W. J. Johnson ..	50, 133
Damper.....	A. E. Elmer ..	50, 569
Damper, Draught, and stove-pipe ventilator.....	G. G. Woffe ..	46, 414
Damper, Self-regulating.....	C. H. Davis ..	48, 291
Damper, Smoke-pipe.....	E. M. Gardner ..	47, 993
Damper, Stove.....	G. Amus ..	50, 216
Damper, Stove-pipe.....	F. Mackwitz and W. Frankfurth ..	46, 007
Damper, Stove-pipe.....	J. L. Howard ..	46, 670
Damper, Stove-pipe.....	H. Kipe ..	47, 111

Invention or Discovery.	Name of Patentee.	No.
Damper, Stove-pipe .....	H. C. Brown .....	47, 923
Damper, Stove-pipe .....	J. Bradshaw and S. C. Wilson .....	48, 046
Damper, Stove-pipe .....	A. V. and A. F. Fletcher .....	48, 058
Damper, Stove-pipe .....	C. Kathan .....	48, 932
Damper, Stove-pipe .....	J. Fowler .....	49, 619
Damper, Stove-pipe .....	J. C. and A. B. Arlington .....	51, 409
Damper, Ventilating and check draught .....	J. A. Lawson .....	51, 249
Damper and ventilator .....	J. H. Littlefield .....	49, 899
Damper for violins .....	A. F. H. Braun .....	48, 648
Dancer, automatic .....	C. Chinnock .....	50, 453

Dolls, Arms for .....	C. F. Blakeslee .....	45, 691
Doll heads and other toys, Constructing .....	L. E. Sallee .....	46, 370
Doors, Elastic studs for .....	A. Eliass .....	45, 984
Doors, Furnace .....	J. Wickersham .....	51, 638
Doors, Furnace, for boilers .....	J. Penketh .....	46, 423
Doors, Sliding, of Railway cars .....	A. G. Safford .....	49, 308
Doors, Spring, Catch for .....	J. C. Plumer .....	48, 637
Doors, Weather strip for .....	I. F. and A. A. Lynch .....	50, 016

Invention or Discovery.	Name of Patentee.	No.
Doors, Weather strip for	G. H. Collins	51, 996
Door fastener	E. H. Crane	46, 451
Door knobs, Extension	G. W. Sayre	49, 556
Door knobs, Fastening, to their shanks	W. T. Manger	48, 874
Door knobs, Fastening, to their shanks	M. V. Nobles	48, 024
Door knobs, Fastening, to their shanks	M. V. Nobles	48, 025
Door knobs, Rose for	M. V. Nobles	48, 023
Door knobs, Securing necks to	T. Kennedy	45, 836
Door mat	F. V. Noyes	49, 780
Door threshold	C. Long	51, 066
Doors and windows, Rendering water-tight	W. C. Fuller	47, 368
Door and window fastener	H. Jordan	51, 059
Double-tree for carriages	J. Hoover	46, 904
Dough, Aerating	E. Fitzgerald	45, 706
Dough, Kneading	G. R. Baker	50, 322
Dough, raising	T. Stockton	47, 050
Dough kneader	T. C. Ring	48, 979
Draught equaliser, Three-horse	E. J. Toof	51, 732
Drag, roller, and seeding machine, Combined	W. H. Hartman and S. Sheller	45, 825
Drag and seeding machine roller, Combined	W. H. Hartman	48, 063
Draining machine, Centrifugal	W. N. Glass and H. W. Bartol	47, 714
Drain tiles	J. D. Evans and T. J. Smedley	51, 097
Drawers	J. Ware	50, 308
Drawers, Coffee and tea	J. O. Shriner	49, 929
Drawer fastening	J. Serrill	51, 625
Draw-heads, Frames of, for railroad cars, Bending and punching	P. L. Weimer	50, 755
Draw-head plates, Bending and punching	P. L. Weimer	50, 756
Drawing-board, Symmetrical	C. D. Hillman	50, 583
Drawing frame, rolls	J. M. Stone	47, 667
Dredging machine for harbors and rivers	A. J. Gove	46, 463
Dresses, Head, Waterfall, for ladies	P. Walter	46, 961
Dresses, Ladies', Finding waist and chest measurement of	M. M. Turner	46, 409
Dress facing	J. A. Mackie	45, 840
Dress protector, Ladies'	T. D. Day	46, 218
Drills	C. L. Noe	46, 815
Drills	A. Shiland	46, 949
Drills	R. G. Wells	48, 609
Drills	L. G. Marshall	48, 819
Drills	L. G. Marshall	48, 872
Drills	J. M. May	49, 129
Drills	H. Loftis and E. Hinman	51, 065
Drills, Boring	D. R. Erdmann	47, 001
Drills, Expanding	F. Gleason	48, 546
Drill, Grain	J. W. H. Doubler	46, 523
Drills, Grain	B. Regan	46, 821
Drills, Grain	J. B. Amos	48, 089
Drills, Grain	W. P. Penn, J. Geiss, and J. Brosius	48, 145
Drills, Grain	J. D. Jones	48, 432
Drills, Grain	J. D. Jones	49, 117
Drills, Grain	J. D. Jones	49, 862
Drills, Grain	J. D. Jones	50, 134
Drills, Grain	J. H. Thomas and P. P. Mast	50, 545
Drills, Grain	J. Davis	50, 914
Drills, Grain	G. W. Farley	51, 707
Drills, Grain, Adjustable drag bar for	J. D. Jones	49, 883
Drills, Grain and cultivator, Combined	E. Badlam	50, 438
Drills, Grain, Drag bars for	J. H. Thomas and P. P. Mast	48, 112
Drills, Grain, Drag bar and teeth for	J. D. Jones	50, 135
Drills, Mounting	H. Haupt	47, 541
Drills, Oil	L. B. Bowman	49, 704
Drills, Oil well	E. Baker	49, 065
Drills, Pneumatic	H. Haupt	46, 686
Drills, Ratchet	E. H. Ahecroft	46, 981
Drills, Reservoir, for tube wells	C. Houghton and E. S. Lewis	51, 051
Drills, Rock	T. J. Lovegrove	46, 757
Drills, Rock	T. J. Lovegrove	47, 601
Drills, Rock	J. C. Dickey	47, 805
Drills, Rock	J. Moulton	47, 850
Drills, Rock	J. Y. Smith	47, 870
Drills, Rock	G. Mulhaupt	48, 301
Drills, Rock	J. M. May	48, 823
Drills, Rock	J. C. Dickey	48, 914
Drills, Rock	C. W. Johnson	49, 034

Gins, Cotton	F. Durand	50, 080
Gins, Cotton	C. Brakell	51, 402
Glass, Coating with platinum	L. P. Angenard	46, 767
Glass, Corrosion or staining the surface of, Preventing the	W. B. Richard	47, 040
Glass, Drinking	J. S. and T. B. Atterbury	50, 437
Glass, Looking, Making	L. P. Angenard	46, 062
Glass, Manufacture of	J. Best	45, 849
Glass, Manufacture of	G. Matthewman	50, 373
Glass, Manufacture of	H. Napier and J. J. Hollins	51, 343
Glass, Ornamenting, Engine for	A. Schwittler	49, 553
Glass, Pollah for	J. M. Warren	50, 406
Glass, Preventing the breaking of, by exposure to heat	E. Thayer	49, 171
Glass, Window	T. D. Stetson	49, 167
Glass cases	E. D. Kinney and C. Wright	48, 683
Glass furnaces	J. Carroll	48, 903
Glass pots	D. McAfee	51, 068
Glass pitchers, Silvering	J. W. Haines	47, 101
Glassware, Manufacture of	J. W. Haines	47, 948
Glass presser-feet of sewing machine	R. E. Peterson	47, 978
Glass in umbrellas, Inserting	E. A. Pond and M. S. Richardson	50, 492
Glass or porcelain picture, Printing frames for	W. J. Kuhns	51, 323
Glazing and starching cords, braids, &c.	D. Meluroy	51, 471
Glucose, Manufacture of	G. R. Percy	46, 565
Gold, Preparing, for dental purposes	E. G. Kearring	51, 459
Gold, silver, &c., Ores of, Disintegrating	A. K. Johnston	48, 284
Gold-beating machine	M. Hastings	48, 394
Gold and silver, Amalgamating	J. N. Wyckoff	50, 296
Gold and other precious metals from their ores, Extracting	H. Wurtz	48, 499
Governors	D. A. Clary	46, 778
Governors	T. S. LaFrance	47, 648
Governors	W. F. Keeler	47, 109
Governors, Engine, Steam	T. J. Lovegrove	48, 344
Governors, Engine, Steam	J. H. Wait	51, 767
Governors, Engine, Steam	T. R. Pickering	50, 624
Governors, Engine, Steam	A. Brown	50, 793
Governor valves	O. L. Brown	48, 652
Governor valves	C. W. LeCount	49, 422
Governor valves	R. W. Gardner and J. Robertson	51, 037

Invention or Discovery.	Name of Patentee.	No.
Governors for water-wheel gates .....	J. H. Wooster .....	46, 430
Grading scrapers .....	C. Evans and W. C. Bartlett .....	47, 531
Grain, Binding .....	A. Goodyear .....	50, 814
Grain, Grinding mills for .....	J. Brown .....	51, 549
Grain, Hulling .....	C. O. Bulloet .....	49, 205
Grain, Hulling and cleaning .....	J. M. Mayer .....	46, 374
Grain, Indian corn and other, Sirup and sugar from .....	F. W. Goesalling .....	49, 749
Grain, Indian corn or other, Sugar from .....	F. W. Goesalling .....	49, 750
Grain, Indian corn or other, Sirup from .....	F. W. Goesalling .....	49, 751
Grain, Levelling, in vessels' hold .....	G. Millsom, H. Spindelaw, and G. V. Watson .....	47, 030
Grain, Mashing, boiling, and fermenting .....	E. F. Prentiss and R. A. Robertson .....	49, 151
Grain, Measured, Tallying machines for .....	S. Hudson .....	45, 829
Grain, Preparing, for distillation .....	J. Chilcott .....	47, 394
Grain, Treating, for manufacture of alcohol .....	W. M. Watson .....	51, 369
Grain, Weighing .....	E. Sampson .....	50, 540
Grain, Weighing .....	E. F. Dunaway .....	51, 438
Grain bands, Securing .....	J. Nelson .....	47, 603
Grain binders .....	S. J. Wallace .....	45, 885
Grain binders .....	W. P. Barker .....	46, 869
Grain binders .....	J. F. Hemperly and C. Barns .....	49, 756
Grain binders .....	S. D. Locke .....	51, 589
Grain binders .....	S. D. Locke .....	51, 600
Grain binders .....	W. W. Burson .....	48, 900
Grain conveyers .....	D. W. Bryant .....	46, 876
Grain dryer .....	L. S. Chichester .....	47, 586
Grain dryer .....	S. Marsh .....	48, 573
Grain dryer .....	R. Heneage .....	49, 626
Grain dryer .....	L. S. Chichester .....	49, 470
Grain dryer .....	H. H. Beach .....	50, 789
Grain dryer .....	A. T. Boon and C. L. Stevens .....	50, 792
Grain dryer .....	J. H. Pattee and E. S. Cleveland .....	51, 348
Grain dryer and coffee roaster .....	G. B. Jones .....	46, 301
Grain elevators .....	F. Taggart, L. S. Chichester, and C. W. Mills .....	48, 495
Grain huller .....	J. H. Thompson .....	48, 326
Grain hulling machine .....	S. Gardner and A. B. Howe .....	51, 445
Grain rakes .....	E. G. Warner .....	48, 606
Grain register .....	J. T. Wiley .....	49, 817
Grain screen .....	H. Ogborn .....	45, 740
Grain screen .....	C. T. & J. B. Messinger .....	49, 429
Grain separator .....	B. F. Trimmer .....	45, 772
Grain separator .....	H. N. Goodrich .....	45, 993
Grain separator .....	E. Young .....	46, 044
Grain separator .....	B. F. Trimmer .....	47, 346
Grain separator .....	J. H. Hamaker .....	47, 417
Grain separator .....	Joseph and James Montgomery and E. Davis .....	47, 772
Grain separator .....	S. K. Ayres .....	48, 233
Grain separator .....	J. Tomlinson .....	48, 603
Grain separator .....	H. A. Barnard .....	48, 890
Grain separator .....	T. Harrison and W. C. Buchanan .....	49, 876
Grain separator .....	J. Davis .....	50, 913
Grain separator .....	A. J. Vandegrift .....	51, 495
Grain separator, Hopper for .....	F. H. Shroeder .....	46, 947
Grain separator and fanning mill .....	H. Ogborn .....	45, 796
Grain shovels .....	E. P. Williams .....	49, 330
Grain weighers, Automatic .....	M. Robbins .....	47, 247
Grain for distillation, Preparing .....	J. Fleischman .....	45, 793
Grain and grass seed separator .....	J. B. Wallace .....	48, 329
Granaries and fruit houses .....	S. R. Beckworth .....	50, 790
Granaries and other buildings, Cooling and ventilating .....	D. E. Somes .....	46, 950
Granary .....	B. M. Nyce .....	50, 267
Graining, printing, &c., Flexible forms for .....	H. Tubeding .....	46, 736
Graining instrument .....	W. Russell .....	47, 339
Graining wood .....	R. A. Adams .....	51, 774
Grape box .....	O. Mallory .....	48, 192
Grape-vine supports .....	F. B. Green .....	47, 415
Grappling apparatus .....	S. Riggs .....	49, 790
Grass, hair, &c., Cloth, the web of which is made of .....	J. Downie .....	51, 436
Grass, hemp, flax, jute, &c., Treating .....	S. M. Allen .....	48, 782
Grasshoppers, Composition for exterminating .....	S. Green .....	49, 258
Grates .....	L. G. Marshall .....	45, 948
Grates .....	R. Kelly .....	46, 112
Grates .....	P. Murray .....	51, 472
Grates .....	W. J. Towne .....	48, 000
Grates .....	J. Miller .....	48, 425
Grates, Fire .....	J. Habermehl .....	47, 947
Grates, Furnace .....	E. Langen .....	50, 996
Grates, Furnace, Steam .....	E. H. Jones .....	48, 286
Grate, Revolving .....	P. J. Boris .....	48, 895
Grates, Stove .....	G. Vanderheyden .....	45, 881
Grates, Stove .....	G. W. Walker .....	45, 883
Grates, Stove .....	J. Glass .....	48, 344
Grates, Stove .....	R. Moss .....	50, 613

Invention or Discovery.	Name of Patentee.	No.
Grate bars.....	W. E. Hill.....	51, 455
Grate bars.....	A. D. Puffer.....	46, 939
Grate bar supporter.....	W. F. Morgan and F. C. Bartlett.....	50, 023
Grate bars for boilers.....	E. Thayer.....	47, 052
Grate bars for furnaces, Casting.....	J. A. Miller.....	45, 121
Grate bars for steam generators.....	E. G. Blakeslee and A. Mansel.....	50, 337
Grates for cooking stoves.....	J. B. Clark.....	48, 773
Grates for cooking stoves.....	D. P. Foster.....	48, 923
Grates for furnaces.....	W. H. Short.....	45, 760
Grates for spices and fruits.....	H. L. Shephardson.....	49, 836
Grates for steam boiler furnaces.....	G. L. Smith.....	48, 455
Grates for stoves.....	W. McIlvain.....	50, 258
Grater, Nutmeg.....	J. Lovendahl.....	48, 237
Gravitating and pressure machines.....	A. Monson.....	50, 151
Grease cups.....	G. Hagenmayer.....	49, 259
Grenades, Hand, Igniting.....	J. S. Adams.....	45, 806
Gridiron, Sheet metal.....	G. Booth.....	49, 581
Gridiron attachment, Movable fireplace with.....	J. W. Westmore.....	47, 176
Grinders, Percussion.....	A. P. Stevens.....	46, 507
Grinder and pollisher, Knife.....	G. L. Wittall.....	48, 755
Grinding apples.....	R. Butterworth.....	49, 714
Grinding faucets and valves.....	T. Shaw.....	48, 216
Grinding knives.....	W. Foakes.....	51, 779
Grinding machine, Saw.....	J. G. Baker.....	46, 483
Grinding paper pulp.....	J. F. Jones.....	47, 425
Grinding and cutting fodder.....	I. Fulton.....	49, 396
Grinding and polishing machine, Stone.....	J. Harsha.....	48, 062
Grinding and polishing metals.....	J. Dodge.....	47, 527
Grinding and polishing saws.....	W. J. Lippincott.....	50, 606
Grindstones.....	J. F. Skilleber.....	49, 928
Grindstone, Packing.....	F. M. Stearns.....	48, 319
Ground, Marking, for planting.....	G. M. Johnson.....	51, 725
Guard, Lock and key.....	C. Leavitt.....	46, 914
Guard, Safety, for the hammer of fire-arms.....	H. E. Gibbon.....	46, 100
Guard, Safety, for protecting pottery ware.....	B. Jackson.....	46, 109
Guard finger for reaping machine.....	A. Winterburn.....	48, 473
Guard, Braiding, for sewing machines.....	L. Planter.....	47, 171
Guide, Hemming.....	W. Gaakill.....	47, 622
Guide, Hemming.....	W. Gaakill and G. H. Knight.....	47, 630
Guide, Thread, for spinning machines.....	E. D. Hurst.....	45, 718
Guide to key holes.....	W. R. Pomeroy.....	49, 000
Guide for piston rods.....	E. Duncomb.....	47, 283
Guitar banjo.....	L. Brown.....	50, 444
Gum, Softening of, Adhesive labels.....	B. Wilder.....	46, 514
Gun, Cascade of, Finishing.....	E. Kaylor.....	50, 139
Gun, Operating, in turrets.....	J. B. Eads.....	46, 222
Gun, Spring, Toy.....	A. Hall.....	47, 815
Gun, Steam, for driving stock from railroad tracks.....	F. G. Smith.....	51, 222
Gun, Submarine steam.....	W. W. Wood and J. L. Lay.....	48, 862
Gun barrels, Constructing.....	E. Allen.....	48, 249
Gun barrels, Rolling.....	J. Yates.....	50, 869
Gun barrels, &c., from Bessemer steel.....	J. Thompson.....	51, 261
Gun cotton.....	J. J. Revy.....	50, 062
Gun cotton.....	J. J. Revy.....	50, 083
Gun cotton and lint.....	J. P. McLean.....	47, 316
Gun locks.....	E. T. Starr.....	51, 622
Gun scraper.....	E. L. Pratt.....	48, 140
Gun spring.....	J. E. Blythe.....	45, 789
Gun wipers.....	H. Berdan.....	49, 848
Guns and gun turrets, Operating.....	J. B. Eads.....	46, 223
Gunpowder, Drying and glazing.....	W. I. Bates and C. S. Smith.....	46, 275
Gunpowder, Keeping.....	J. Gale, Jr.....	50, 313
Gunpowder, Pressing.....	L. Du Pont.....	50, 104
Gunpowder, Pressing, Press for.....	L. Du Pont.....	50, 568
Gutters, Cleaning, and scraping roads.....	N. Potter.....	48, 521
H.		
Hair, Brushing, Barber's apparatus for.....	C. P. Kroll.....	49, 893
Hair restorative.....	B. W. Carr.....	50, 901
Hair restorative.....	M. Howard.....	51, 319
Hair and wool from animals, Clipping.....	C. W. Emery.....	46, 226
Hair or wool from animals, Clipping.....	C. W. Emery.....	45, 221
Halters.....	H. B. Ware.....	49, 939
Halter, Neck rope.....	K. Gibbs.....	51, 582
Halter clasp.....	J. H. Plumstead.....	48, 307
Hame, Harness.....	J. E. Brown.....	51, 256
Hame fastener.....	J. B. Woolsey.....	47, 762
Hame fastener.....	A. J. Preston.....	50, 842
Hame fastening.....	W. W. Kittleman.....	47, 735
Hame and horse collar.....	M. Killacky.....	46, 606
Hammer.....	J. H. Littlefield.....	49, 896
Hammer.....	C. Monson.....	50, 262
Hammer, Atmospheric.....	W. D. Grimshaw.....	45, 896

Invention or Discovery.	Name of Patentee.	No.
Hammer, Atmospheric	H. Shattuck	49, 592
Hammer, Carpenter's	J. O. Montignani	46, 574
Hammer, Dental	J. C. Dean	48, 708
Hammer, Drop	J. Evans	47, 405
Hammer, Steam, Valve gear for	C. W. Willard	49, 462
Hammer, Steam, Valve gear of	J. Watt	50, 407
Hammer, Trip	H. C. Fessel and F. Krautwadel	46, 229
Hammer, Trip	T. J. Root	46, 267
Hammer, Artificial	O. Lindsay and I. Vance	50, 014
Hammer, Artificial substitutes for	J. Reichenbach	48, 440
Hammer and arms, Artificial	T. Uren	46, 159
Hammer and arms, Artificial	T. Uren	46, 158
Handles, Horn, Attaching to knives, &c.	M. Bradley	49, 222
Handles attachment to small arms	E. Charlesworth	50, 312
Handles to whitewash brushes	W. W. Burnett and J. P. McIntosh	50, 449
Handles for lamp chimneys	M. W. Brown	46, 212
Handle for tea and coffee pots	G. B. Halsted	48, 061
Harmoniums	J. Gilmour	48, 881
Harmoniums or cabinet organs	T. Atkins	47, 061
Harmon	E. E. Hardy	47, 949
Harmon	J. Calkins	48, 790
Harmon	F. D. Ladenberger	51, 063
Harmon, Fastening for	J. Shepard	47, 500
Harmon, Loom, Wire heddles for	M. Finkle	49, 251
Harmon saddles	O. B. North	47, 244
Harmon saddles	P. Bottyer	47, 276
Harmon saddletrees	S. E. Tompkins	45, 880
Harmon saddletrees	O. B. North	46, 489
Harmon saddletree	A. Koehler	47, 647
Harmon snap	H. Harris	46, 468
Harmon snap	H. Harris	46, 796
Harrows	M. Easterbrook	49, 867
Harrows	C. Jillson	50, 478
Harrow, Adjustable	H. Pulse	51, 750
Harrows, rotary	J. D. Parrot	50, 729
Harrow and cultivator	T. Short	46, 274
Harrow and cultivator, Combined	E. D. and O. B. Reynolds	46, 025
Harrow and roller, Combined	W. H. Converse	47, 090
Harrow and roller, Combined	W. R. Mears	50, 259
Harrow and seeder	D. L. and J. M. Barlow	45, 903
Harvester	J. W. Bope	45, 810
Harvester	D. D. Glitt	45, 823
Harvester	J. W. Bope	45, 905
Harvesters	J. W. Bope	45, 906
Harvesters	A. Wood	46, 170
Harvesters	W. F. Cochrane	46, 178
Harvesters	W. F. Cochrane	46, 179

Hats.	E. Morris.	48, 628
Hats.	W. H. Towers.	49, 570
Hats.	J. H. Earle.	50, 849
Hats.	D. W. Gitchell.	51, 172
Hats, Attaching mourning badges to.	T. H. Lowrie.	48, 417
Hats, bonnets, &c., Fabrics for.	H. Loewenberg.	46, 568
Hats, Brushing.	C. Faure.	48, 235
Hats, Fabric for, Water-proof.	W. E. Mahon.	49, 775
Hats, Felt, Printed and embossed.	A. Bailey.	47, 269
Hats, Finishing.	J. A. Roche and J. J. Stewart.	50, 165
Hats, Printing.	T. Byrne and T. Henry.	47, 516
Hats, Ventilating.	W. Smith.	50, 285
Hats, Ventilating.	D. K. Albright and L. H. De Lange.	50, 991
Hat bodies, Forming and napping.	R. Eickemeyer.	46, 552
Hat bodies, Stiffening.	T. Trowbridge.	48, 328
Hat bodies, Stretching.	R. Eickemeyer.	46, 553
Hat frames.	A. Komp.	48, 412
Hat frames, Skeleton, Metallic.	A. Komp.	47, 431
Hats and bonnets, Embossing.	H. E. West.	49, 049
Hats and bonnets, Pressing.	H. E. West.	49, 048
Hats and bonnets, Pressing.	E. Copleston.	49, 384
Hay, Cutting and preparing, for baling.	S. Colahan.	46, 983
Hay, Cutting and pressing.	R. Wakeman and J. L. Balance.	47, 683
Hay, Loading.	S. R. Higgins.	45, 826
Hay, Loading.	R. Cobb.	51, 284
Hay, Raking and bunching.	L. Wallace.	51, 500
Hay, Raking and loading.	W. A. Duncan.	46, 647
Hay, Raking and loading.	J. N. Smith.	46, 863
Hay, Raking and loading.	M. K. Lewis, J. C. Durbin, and L. P. Lewis.	49, 423
Hay, stone, &c., Gathering and loading.	G. W. Holley.	48, 175
Hay-elevating fork.	W. S. Newton.	46, 018
Hay elevators.	S. Rogers.	46, 027
Hay elevator and stacker.	A. W. Tooker.	48, 742
Hay forks, Horse.	R. Reynolds and C. Young.	47, 992
Hay loaders.	M. K. Lewis and J. C. Durbin.	45, 726
Hay loaders.	W. Platt and A. G. Burnham.	46, 139
Hay racks.	A. Naramor.	46, 017
Hay spreaders.	W. C. Gifford.	45, 992
Hay spreaders.	D. Lyman.	47, 437
Hay spreaders.	H. Beers.	47, 919

Invention or Discovery.	Name of Patentee.	No.
Hay spreader and elevator, Combined	T. C. Craven	51, 650
Hay spreader and horse rake, Combined	G. N. Palmer	51, 473
Hay-spreading machines	C. Willard	49, 021
Hay for baling, Preparing	G. H. Nye	45, 853
Head, Coverings for the	T. Bracher	48, 510
Head dresses, Bands for	N. Grant and G. Downs	48, 677
Head dresses, Waterfall, for ladies	P. Walter	46, 961
Head-rest for railroad car seats	N. Gates	48, 270
Head-rest for railroad car seats	W. R. Phelps	48, 586
Heat, Utilizing, from a furnace	P. Bennett	50, 551
Heaters	J. Chlicott	49, 504
Heaters	E. C. Robinson	49, 652
Heaters	C. C. Hare	50, 354
Heaters, Feed-water	R. Poole	47, 499
Heaters, Feed-water	W. B. Cross	50, 459
Heaters, Feed-water, for steam boilers	W. A. Lighthall	46, 252
Heaters, Fireplace	H. H. Welch	49, 325
Heaters, Gas	J. H. Jones	47, 426
Heaters, Gas	J. Q. Birkey	50, 678
Heaters, Mercurial	T. C. Hargrave and W. King	48, 276
Heaters, Sad-iron	H. W. Dopp	48, 380
Heaters, Steam	L. V. Fichet	50, 346
Heater, Water, Laundry	J. Keane	48, 561
Heater, Water, Stove-pipe	J. Baumeister	48, 253
Heater for buildings	J. A. Lawson	46, 250
Heaters for liquids, Portable	W. N. Hancock	46, 665
Heater for skates	O. W. Taft	51, 492
Heating, cooling, and ventilating	D. E. Somes	51, 236
Heating, Steam, and fire-extinguishing apparatus	C. S. Brown	49, 509
Heating apparatus, Steam, Coils for	J. Trageser	50, 422
Heating apparatus, Water	J. McClosky	47, 706
Heating and cooking apparatus	E. Edwards	47, 488
Heating and fuel-saving device	D. C. Colby	49, 029
Heat-controller attachment	M. T. Hitchcock	48, 180
Heat-radiating attachments for stoves or furnaces	J. B. Hyzer	46, 500
Heat radiators	H. Rugee	47, 535
Heat radiators	D. G. Fletcher	58, 540
Heat radiators	A. Edwards	46, 941
Heat radiators for stoves	W. E. Rennolds	50, 089
Heat radiators for stove-pipe	N. F. Goodrich	46, 525
Heat and cold, Applying, in the treatment of diseases	J. Chapman	48, 946
Hedges, Trimming	W. C. Hooker	49, 311
Hedge trimmer	A. Selover	51, 241
Heel calks	T. Symonds	46, 761
Heel-polishing machine	J. M. Thompson and S. D. Tripp	47, 341
Heel-trimming machine	J. A. Sargent	48, 446
Heel-shave	J. Ross	47, 689
Hemming guides	W. Gaskill	47, 632
Hammers for sewing machines	H. Gobel	47, 630
Hemming guide	W. Gaskill and G. H. Knight	47, 539
Hemp, flax, &c., Fibres of, Separating	J. B. Fuller and J. P. Upham	48, 783
Hemp, flax, jute, grass, &c., Treating	S. M. Allen	50, 419
Hemp, flax, &c., Manufacture of paper pulp, Treating	M. A. Cushing	47, 538
Hemp, flax, &c., Preparing, for spinning	J. B. Fuller and J. P. Upham	49, 496
Hides, Hair from, Removing	M. Bray	49, 839
Hides, Hair from, Removing	S. S. Weed	49, 811
Hides, Hair and lime from, Removing	S. S. Weed	48, 578
Hinges	S. J. Miller, A. B. Barnett, and W. H. Study	48, 630
Hinges	N. Sehner	49, 511
Hinges	S. E. Dummer	49, 982
Hinges	J. Close and I. Buckman, jr	50, 411
Hinges	H. Young and M. Stachelin	50, 423
Hinges	M. Riley	50, 566
Hinges	S. E. Dummer	51, 426
Hinges	J. Close and I. Buckman, jr	51, 447
Hinges	E. W. Gilmore	51, 476
Hinges	E. N. Porter	51, 604
Hinges	W. C. McGill	51, 711
Hinges	S. H. Frink	50, 861
Hinges	L. Upham	46, 251
Hinges, Shutter	R. Lee	48, 075
Hinges, Shutter	C. F. Knauer	48, 264
Hinges, Shutter	S. Drann	50, 099
Hinges, Shutter	D. G. Coppin	50, 239
Hinges, Shutter, and fastening	W. S. Gerard	46, 258
Hobby-horse	P. J. Marqua	50, 741
Hod	J. Short	49, 649
Hoes	A. Patterson	48, 304
Hoes, Weeding	J. Naugle	49, 985
Hoes, Weeding	C. Crofut	50, 436
Hoes, Weeding, Adjustable	A. C. Arnold	51, 783
Hog scalders, Portable	A. Clark	47, 329
Hog tamer	T. G. Felton	

Invention or Discovery.	Name of Patentee.	No.

Ladder, Extension .....	J. L. Ripley .....	48, 210
Ladder, Fruit .....	A. W. Olds .....	46, 694
Ladder, Fruit .....	D. McMaster .....	51, 205

Invention or Discovery.	Name of Patentee.	No.
Ladder, Fruit or step	W. E. Bond	50, 894
Ladder, Orchard	C. Hayes	46, 105
Ladder, Step	J. Burnett	50, 091
Ladder, Step	A. F. Saunders	51, 394
Lamps	H. C. Hutchinson	45, 719
Lamps	J. Adair	45, 805
Lamps	E. Marsh	46, 053
Lamps	G. A. Tremeschine	46, 059
Lamps	J. Ives	46, 471
Lamps	W. W. Batchelder	46, 536
Lamps	D. Symonds	46, 730
Lamps	J. M. Perkins and M. H. House	46, 819
Lamps	O. Hicks	47, 493
Lamps	H. W. Hayden	47, 690
Lamps	E. M. Lang and J. Gilman	47, 691
Lamps	M. L. Callender	48, 128
Lamps	C. Boschan, J. Hindner, and W. Caffon	48, 635
Lamps	J. Ives	48, 816
Lamps	L. J. Atwood	49, 064
Lamps	J. P. Driver	49, 613
Lamps	E. H. Groen	49, 752
Lamps	W. Lassel	49, 769
Lamps	M. H. Collins	49, 984
Lamps	C. F. Martin	50, 019
Lamps, Coal oil and gas stove	J. E. Ambrose	46, 045
Lamps, Floor	J. L. Bryant	49, 852
Lamps, Furnace, Hot blast	J. H. Wilhelm	50, 865
Lamps, Hanger for	T. S. Hudson	46, 236
Lamps, Hydrogen	C. Hagen and P. Aurnhammer	47, 012
Lamps, Keeping oil cool in	J. Allen	50, 087
Lamps, Locomotive head	P. Budenback	51, 135
Lamps, Miners	W. McClave	49, 477
Lamps, Oil, Coal	A. H. Platt	47, 451
Lamps, Oil, Coal, Hand	E. Roberts	49, 994
Lamps, Oil, Coal, for cooking purposes	W. B. Billings	50, 892
Lamps, Raising and lowering	T. G. Crosby	48, 334
Lamps, Shade holder for	C. St. John	46, 534
Lamps, Shade holders for	L. J. Atwood	47, 913
Lamps, Street	J. Stratton	48, 461
Lamps, Street, lanterns, &c.	J. Binney	46, 631
Lamps, Vapor	J. J. Riddle	46, 265
Lamps, Wind guard and air-heater for	J. B. Copwell	50, 569
Lampblack	A. Prenatt	50, 493
Lamp cleaner	R. White	50, 310
Lamp cone	C. H. Buckalew	47, 087
Lamp post, Gas, Street	J. T. P. Hunt	45, 717
Lamp shade	A. M. Mills	47, 636
Lamp shade holders	J. Hanley	47, 418
Lamp stand and clothes dryer, Combined	J. Donaldson	49, 944
Lamp wicks, Trimming	H. F. Bond	45, 692
Lamps for burning oil	T. S. Speakman	47, 173
Lamps for heating curling irons, &c.	D. T. Burrell	46, 775
Lamp and stove, Combined	C. B. Guy	48, 678
Lance, Bomb, for killing whales	S. Barker	46, 437
Lands, Marsh and swamp, Reclaiming	L. B. Driggs	48, 382
Lanterns	G. C. Merrill	46, 010
Lanterns	C. Engelskirken	46, 227
Lanterns	J. J. Leffingwell	47, 212
Lanterns	J. S. and T. B. Atterbury	47, 967
Lanterns	W. Westlake	47, 478
Lanterns	J. H. Irwin	47, 551
Lanterns	J. Ives	49, 274
Lanterns	V. H. Miltimore	49, 290
Lanterns	J. King	49, 417
Lanterns	A. Tufts	49, 665
Lanterns	S. Roebuck	49, 953
Lanterns	W. Westlake	50, 536
Lanterns	W. Westlake	50, 192
Lanterns	W. Westlake	51, 526
Lanterns	R. Dunham	50, 567
Lanterns	J. H. Irwin	50, 591
Lanterns	R. M. Merrill	50, 725
Lanterns	L. F. Betts	51, 005
Lanterns, Globe	J. S. and T. B. Atterbury	47, 262
Lanterns, Pocket	J. A. Minor	46, 011
Lanterns, Portable	C. Deans	46, 184
Lanterns, Portable	H. S. Kassebaum	47, 733
Lanterns, Stone	D. L. Jacques	46, 802
Lantern frames	R. S. Laird	46, 114
Lantern guides	T. Brown, Jr., and J. L. Lowry	50, 653
Lanterns and street lamps	J. Binney	46, 631
Lap shaver and leather splitter	J. Harvey and T. Herkstroeter	47, 300
Lard, Refining	G. C. Napheys	51, 075

Invention or Discovery.	Name of Patentee.	No.
Lard, &c., Rendering	T. Hopkins	45, 960
Lard, Stirring and cooling	A. R. Judson	47, 361
Lard, tallow, and grease, from the refuse of rendering tanks, Separating	P. Andrew	46, 904
Lard, tallow, &c., Rendering	C. E. Gray	46, 103
Last	P. Jackson	49, 375
Last	G. Marshall	50, 239
Last, Boot and shoe	J. C. Plumer	45, 748
Last, Darning	D. E. Holden	51, 047
Last, Shoe	S. K. Abbott	46, 174
Last, Shoe, Fastenings for blocks of	D. Lyneham and H. H. Koch	47, 314
Lathing machines, Tee piece for	A. S. McIntire and N. S. Thompson	46, 375
Latch	H. H. Elwell	43, 650
Latch	E. A. Tuttle	47, 758
Latch, Cupboard	B. P. Grover	49, 398
Latch, Gate	J. Leonard	46, 292
Latch, Gate	E. O. Frink	51, 710
Latch, Knob	A. Williams	48, 123
Latch, Knob	G. J. Colby	48, 909
Latch, Knob	H. Richmond and A. Cloude	50, 273
Latch, Reversible	E. Halley	50, 931
Latch, Stands for	H. D. Stover	50, 510
Latch, Spring, for window sash	W. Teubach	48, 463
Latch for blinds or shutters	B. S. Huntington	50, 186
Latch for doors	S. W. Foadlek and A. C. Dakin	46, 653
Latch and bolt	W. J. Meyer	50, 280
Laths for buildings	D. Phillips	45, 936
Laths	J. Stark	47, 997
Laths, Chuck for	S. J. Cone	48, 521
Laths, Dogs for	W. Vine	49, 180
Laths, Engine	J. L. Johnson	46, 677
Laths, Prism	A. Kelsey	51, 388
Laths, Turning	D. Slate	46, 162
Laths, Turning	N. Harper	46, 352
Laths, Wood turning	G. H. Ober	48, 428
Laths, Wood turning	H. Locke	49, 035
Laths, Wood turning	R. W. George	49, 516
Laths, Wood turning, Cutters for	J. Shannon	49, 161
Laths chuck	W. A. Redly	47, 981
Laths chuck	S. B. Burritt	48, 259
Laths dog	C. W. Count	50, 604
Laths fastening	J. M. Stone	47, 876
Laths for turning heads of nails, tacks, &c.	W. H. Nichols and H. H. Abbe	49, 139
Laths for turning tool handles	H. K. Jones	48, 409
Laths for wood turning	W. W. Carey	51, 554
Laundry, Family	H. E. Smith	50, 964
Leaky jack for vessels' sails	D. B. Arnold	47, 178
Lead, Refining	J. J. Crook	50, 800
Lead, Sheet	J. Robertson	50, 036
Lead, White	W. Archer and C. Elce	46, 706
Lead, White	W. Baker	48, 243
Lead, White, and glucose	R. Rowland	48, 039
Lead, White, Pots for the manufacture of	J. H. Chadwick	51, 018
Leather, Articles of, Economising the manufacture of	W. Adamson	46, 061
Leather, Artificial	W. W. Walte	51, 781
Leather, Blacking, Composition for	R. W. Keating	47, 957
Leather, Boarding	W. H. Moore	48, 971
Leather, Cutting	J. F. Severence	47, 885
Leather, Drying and pressing	G. Harvey	49, 402
Leather, Embossing	G. W. Pratt	48, 676
Leather, Harness, Cutting	J. Wehr	49, 459
Leather, Punching	L. H. Wood	48, 474
Leather, Scouring	W. M. Clark	49, 606
Leather-channelling tool	E. H. Crane	45, 978
Leather drying	R. Lee	48, 186
Leather splitter and lapshaver	J. Harvey and F. Herktroeter	47, 300
Leather water-proof, Rendering	G. Conklin	49, 896
Leather and process for manufacturing the same	G. Botters	46, 443
Legs, Artificial	A. A. Marks	46, 687
Legs, Artificial	R. Clement	47, 281
Legs, Artificial	T. Burr	47, 353
Legs, Artificial	J. W. Watson and T. B. Stanley	48, 138
Legs, Artificial	J. J. Austin	48, 251
Legs, Artificial	J. Condeil	48, 660
Legs, Artificial	J. Condeil	48, 792
Legs, Artificial	J. Monroe	49, 038
Legs, Artificial	J. A. Foster	49, 253
Legs, Artificial	J. Schneider	49, 443
Legs, Artificial	G. B. Jewett	49, 528
Legs, Artificial	G. B. Jewett	49, 529
Legs, Artificial	A. Mennel	49, 645
Legs, Artificial	J. Walker	49, 836
Legs, Artificial	R. G. Lockwood	50, 770

Invention or Discovery.	Name of Patentee.	No.
Legs, Artificial	G. B. Jewett	51, 583
Lemon-squeezer and fruit masher	W. H. Armington	50, 199
Lenses, Photographic	C. B. Boyd	50, 681
Lenses, Photographic	J. Schnitzer	49, 180
Lenses for spectacles	C. Buckley	51, 776
Letters, packages, &c., Transmitting and delivering	A. E. Beach	49, 629
Letter balance, pen-rack, and calendar, Combination of	H. N. Toft	45, 770
Letter file	J. W. Hauxhurst	50, 580
Letter or invoice file	R. Boeklen	50, 632
Levels	G. Cuppers	51, 364
Levels, Pendulum	B. F. St. John	49, 802
Levels, Spirit	R. F. Burnett	49, 710
Level, square, compass, and plumb-staff, Combined	J. R. Abbott	51, 675
Lever, Differential	G. J. Washburn	48, 838
Leverage	W. Willis	40, 409
Lifts, Dead centre	J. J. Gorman	46, 102
Lifting apparatus	G. B. Windship	49, 345
Lights, Head, for engines	S. M. Davies	46, 394
Lights, Head, for locomotives	T. S. Ray and S. E. Cleveland	51, 351
Lights, Head, Locomotive	T. J. Newland	46, 380
Lights, Ships' deck and side, Closing	E. B. Vannevar	48, 033
Lights for vessels, Deck and side	C. Perley	48, 836
Lightning conductors	L. Johnson	47, 310
Lightning rods	S. J. Mitchell	47, 846
Lightning rods, Joints for	L. King	49, 633
Lightning-rod joints	J. B. Lyon	50, 372
Lightning-rod joints	N. E. Smith	50, 398
Limbs, Artificial	J. Combs	49, 234
Lime, super-phosphate of	E. P. Baugh	47, 610
Linchpin	G. Wright	47, 674
Linchpins, Securing	C. M. Risley	49, 651
Linen, cotton, &c., Printing and dyeing	A. Parof	50, 885
Liniment	G. W. Smith	46, 715
Liniment	B. Marteller	47, 653
Liniment	J. H. M. Morris	48, 198
Link, Adjustable	T. Pfeiffer	51, 661
Link, Snap	C. W. Saladee	51, 066
Linsced, Triturating and heating	T. Rowe	46, 945
Lint and gun cotton	J. P. McLean	47, 316
Liquid, Concentrating	C. A. Wood	47, 158
Liquids, Cooling	F. and F. Hinkel	48, 341
Liquids, Evaporating	J. J. Johnson	50, 935
Liquids, &c., Filtering	R. Stewart	46, 734
Liquids, Freezing	J. Baptiste, J. Mignon, & S. H. Rouart	50, 212
Liquids, Heater for, Portable	W. N. Hancock	46, 665
Liquids, Inflammable, Preparing so as to prevent accidents	T. J. Barron	46, 387
Liquids, Saccharine, Boiling and evaporating	D. M. Cook	48, 522
Liquids, Saccharine, Evaporating	B. Brown	46, 669
Liquids, Spirits and other, distilling	F. Hoeck	51, 003
Liquids in casks, Measuring	W. L. McCarthy	51, 069
Liquors, Malt, Cooling	E. C. Wisemann	50, 293
Liquors, Malt, Decolorizing	C. R. M. Well	50, 523
Liquoring sugar in centrifugal machines	F. Seiberlich	49, 310
Loom luting, Revivifying	J. Chilcott	50, 320
Lock	H. Jackson	46, 341
Lock	L. F. Munger	46, 531
Lock	N. Stafford	46, 721
Lock	W. B. Dodds	46, 858
Lock	H. Oaks	47, 325
Lock	B. M. Vanderveer	47, 470
Lock	J. Sargent and H. W. Covert	47, 575
Lock	C. R. Wagner	47, 588
Lock	W. Hall	47, 817
Lock	W. K. Marvin	47, 842
Lock	H. D. Richardson	48, 208
Lock	L. Yale, Jr.	48, 475
Locks	F. Rudolph	48, 980
Lock	C. T. Gibson	49, 101
Locks	E. W. Brettell	49, 223
Lock	L. Lillie	49, 262
Lock	J. Post	49, 297
Lock	J. Post	49, 298
Lock	H. B. Tyler	49, 481
Lock	W. C. Busby	49, 719
Lock	J. Euteneur	49, 991
Lock	A. E. Deltz	51, 152
Lock	L. H. Magott	51, 467
Lock	R. Vollschwiltz	51, 498
Lock	B. M. Vanderveer	51, 762
Lock, Door, Keepers for	S. B. Williams	51, 629
Lock, Hoop, for baling cotton	F. Quant	51, 214
Lock, Hoop, for cotton bales	E. V. Fassmann	47, 288
Lock, Keys in, Fastening	J. H. Desalusse	49, 339
Lock, Night, Traveller's	W. Thomas	50, 751

Invention or Discovery.	Name of Patentee.	No.
Lock, Pad.....	D. T. Brown.....	47,352
Lock, Pad.....	A. Huffer and N. Sehner.....	48,558
Lock, Row.....	J. W. Norcross.....	46,132
Lock, Row.....	W. Sage.....	46,589

Packing, Elastic, for the exterior of pumps in deep wells .....	J. Moulton .....	46, 860
Packing, Metallic, for steam piston .....	H. D. Dunbar .....	50, 697
Packing, Piston .....	A. J. Stevens .....	46, 723
Packing, Piston .....	W. R. Thomas .....	46, 733
Packing, Piston, for pumps .....	D. B. Fuller .....	45, 969
Packing, Tube .....	S. L. Fox .....	45, 822
Packing, Wall .....	J. Calkins and J. Frazier .....	50, 558
Packing former, India-rubber .....	W. Webster .....	47, 479
Packing rings for piston rods .....	W. C. Conwell .....	49, 725
Packing tubes of oil wells .....	R. A. Wilder .....	50, 194
Packing for artesian wells .....	S. Swarts .....	48, 589
Packing for deep wells .....	F. Martin .....	49, 903
Packing of pistons in deep wells, Adjusting .....	E. D. Brown .....	50, 898
Packing for oil wells .....	J. R. Cross .....	46, 217
Packing for oil wells .....	J. R. Cross .....	50, 910
Packing for oil well tubes .....	C. L. Noe .....	49, 544
Packing for oil well tubes .....	P. Sicouret .....	49, 579
Packing for oil well tubes .....	G. E. Mills .....	49, 778
Packing for oil well tubes .....	J. Parham, Jr .....	49, 783
Packing for pistons, &c. .....	J. V. and W. H. Miller .....	47, 119
Packing for rifled projectiles .....	F. Schenkl .....	45, 951
Packing of stuffing boxes, &c., Lubricating .....	J. B. and W. H. Miller .....	47, 170
Packing for tubes of boilers or condensers .....	J. Newkirk .....	49, 295
Pads, Breast, Ladies' .....	J. A. Mason .....	45, 243
Paddlewheel, Feathering .....	G. A. Keene .....	45, 835
Padlock .....	W. Bohannon .....	46, 539
Padlock .....	E. Coyle .....	46, 643
Padlock .....	H. Jackson .....	49, 113
Padlock .....	H. D. Blake .....	49, 468
Padlock .....	T. Slaight .....	51, 488
Padlock .....	V. Enders .....	51, 576
Paging and numbering machine .....	G. J. Hill .....	48, 488
Pails, Painting, Tool for .....	J. Carter .....	46, 075
Paint .....	E. Battley .....	49, 467
Paint .....	J. B. Hodgkins .....	51, 317
Paints, enamels, &c., Composition for .....	M. W. Brown .....	49, 708
Paint composition .....	J. Ball and J. Ford .....	49, 086
Paint composition .....	J. C. Wendrem .....	49, 201
Paint compound .....	D. P. Flinn .....	50, 608
Paint for ships' bottoms .....	J. G. Tarr and A. H. Woson .....	48, 221
Paint for ships' bottoms .....	D. Parkhurst .....	48, 583
Paint for the bottoms of ships .....	J. G. Tarr and A. H. Woson .....	48, 323
Painting pails, Tool for .....	J. Carter .....	46, 075
Pae, Amalgamating .....	S. W. Bullock .....	48, 480
Pae, Dust, and brush .....	C. H. Parker and G. Burnham .....	50, 270
Pae, Evaporating .....	G. Bez .....	47, 511
Pae, Evaporating .....	H. F. Bartlett .....	49, 694
Pae, Metal, Sheet .....	C. F. Chambers .....	48, 516
Pae, Metal, Sheet, Pressing .....	F. M. Woods .....	50, 410
Pae, Milk .....	F. J. May .....	50, 256
Pae, Rendering .....	A. Black .....	47, 788
Pae, Sap .....	H. Earl .....	47, 401
Pae, scale and funnel .....	A. A. Smith .....	50, 636
Panoramic and photographic views, Taking .....	J. R. Johnson and J. A. Harrison .....	51, 279
Pastaloon .....	B. J. Greeley .....	50, 242
Pastaloon guard, boot drawer and spur carriers, Combined .....	E. P. Watson .....	45, 776
Pantry .....	J. Shattuck .....	48, 631
Pap or slop of clay for potters' use .....	J. Muir .....	45, 736
Paper .....	J. M. Allen .....	49, 209
Paper .....	J. W. Dixon .....	51, 568
Paper .....	J. B. Read .....	51, 751
Paper, blotter weight, rule, cutter, and square, Combination of .....	A. H. Trego .....	50, 404
Paper, Cigarette .....	F. X. Hazman and L. L. Arnold .....	48, 936
Paper, Cutting .....	C. Wells and H. Barth .....	49, 018
Paper, Cutting, in sheets .....	J. Hatch .....	48, 395
Paper, Delivering, from printing presses .....	C. O. Furbush .....	47, 411
Paper, Drying .....	J. R. Rogers .....	46, 026
Paper, Fastening for, Adhesive .....	G. R. Burdon .....	46, 071
Paper, Lace, Make .....	C. Lang .....	46, 115
Paper, Lining, Substitute for .....	G. Munger .....	50, 485

Invention or Discovery.	Name of Patentee.	No.
Paper, Preparing, for photographic use	J. D. W. Brinkerhoff	51, 010
Paper, Punching, for telegraphs	M. Lefferts	51, 464
Paper, Sheets of, Plating or finishing	C. T. Brainbridge	49, 691
Paper, Tobacco	H. J. Hall	46, 223
Paper bags	J. Arkell and B. Smith	48, 036
Paper bellows	M. F. Dorsch	46, 240
Paper board	J. F. Jones	49, 119
Paper board	J. F. Jones	49, 684
Paper cutter and ruler	J. Woodward	48, 756
Paper-cutting machine	W. Smith	51, 689
Paper fastener	Z. W. Denham	47, 526
Paper file	W. Burnet	45, 813
Paper files	W. L. Woods	46, 415
Paper file	G. Lautenschlager	48, 568
Paper hangings, Printing	F. L. Munroe and T. Mason	48, 199
Paper holder	J. W. Foard	49, 744
Paper machinery	H. Chapman	51, 293
Paper-making machines	J. Scanlan	48, 347
Paper-making machines, Drying felt for	S. W. Baker	50, 323
Paper pulp	J. A. Roth	49, 480
Paper pulp	J. W. Dixon	51, 430
Paper pulp	J. W. Dixon	51, 431
Paper pulp	J. W. Dixon	51, 433
Paper pulp	J. W. Dixon	51, 570
Paper pulp	J. W. Dixon	51, 571
Paper pulp	J. W. Dixon	51, 572
Paper pulp, Bleaching	J. W. Dixon	51, 569
Paper pulp, Grinding	J. F. Jones	47, 425
Paper pulp, Manufacture of, Rotary boiler for	H. B. Meesch	45, 845
Paper pulp, Manufacture of, Treating hemp, flax, &c., for	M. A. Cushing	50, 419
Paper pulp, Treating straw for	H. B. Meesch	50, 835
Paper pulp, Treating straw to obtain	T. O. Nixon	47, 217
Paper pulp, Treating vegetable fibre for the manufacture of	J. W. Dixon	51, 706
Paper pulp, Vegetable substances for, Disintegrating	Z. G. A. N. P. Ortolli, A. A. Fredet, and F. A. H. Matnasiero	47, 505
Paper pulp from corn stalks	J. W. Dixon	51, 432
Paper stock	H. Betts	49, 069
Paper stock, Manufacture of	W. Deltour	45, 791
Paper stock, Preparing, Engine for	J. G. Fuller	46, 293
Paper stuff, Making	S. Lenker and H. H. Spencer	46, 915
Paper washer for paper stock	G. E. Sellers	46, 030
Paper for telegraphs, Perforating	L. Bradley	48, 479
Paraffine, tar, &c., Treating oil wells to remove	J. Frazier	47, 410
Paraffine, Treating oil wells for the removal of	J. Frazier	49, 995
Paste, Bluing	R. G. Vassar	46, 160
Pasteboard, Cutting	C. E. Clark	46, 448
Pasteboard, Cutting and scoring	S. Orth	49, 910
Pasteboard for boxes, Cutting	E. E. Clarke	46, 522
Pasteboard for boxes, Cutting	E. E. Clarke	46, 604
Pattern, Boot and shoe	N. Silvester	50, 043
Pattern for cutting boots	O. D. Drew	47, 623
Pavement, Composition	D. C. Heller	51, 513
Pawl and ratchet, Automatic	O. Gilder	46, 791
Pawl and ratchet, Feed wheels as substitutes for	O. C. Phelps	47, 126
Pea-sheller and cherry-stoner	G. Sanford	50, 278
Peat, coal dust, &c., Consolidating	W. J. Cheyney and E. T. Dieterichs	46, 777
Peat, Drying and charring	F. L. H. Danchell	47, 162
Peat, Preparing	M. S. Roberts	49, 438
Peat, Preparing, for fuel	S. Marden	51, 390
Peat, Tempering and preparing	N. F. Potter	47, 331
Peat, Treating	J. H. Smith	50, 743
Peat, Treating	J. H. Smith	51, 241
Peat for fuel, Preparing	N. F. Potter	47, 564
Peat for fuel, Preparing	A. Betteley	49, 218
Peat for fuel, Preparing	A. Betteley	51, 004
Pedestal, Draught, and soda-water cooler	G. T. Palmer	46, 581
Pedestals for railroad cars	J. P. Wendell and S. Utick	50, 427
Pegger, Hand	J. H. Brown	50, 298
Pegging machine, Hand	L. Goddu	51, 387
Pen, Fountain	B. J. La Mothe	47, 132
Pen, Fountain	G. F. Hawkes	50, 470
Pen, Fountain	L. M. Sanford and J. P. Beebe	51, 020
Pen distributor	S. A. Potter	48, 717
Pen-holder	S. Walker	45, 824
Pen-holder	T. C. Ball	46, 290
Pen-holder	A. Mason and P. H. Cary	50, 543
Pen-holder	F. Brackett	50, 897
Pen-holder and pencil, Weighing attachment for	D. A. B. Savy	49, 059
Penman's assistant	W. King	51, 530
Pen-rack, calendar, and letter-balance, Combination of	H. N. Taft	45, 770
Pen and pencil case	T. W. Cox	48, 374
Pen and pencil case	W. S. Hicks	49, 878
Pencil-point protector and mark eraser	J. B. Hodgakin	46, 358

Invention or Discovery.	Name of Patentee.	No.
Pencil sharpener.....	R. Wright.....	46, 269
Pencil sharpener.....	H. P. Andrews.....	49, 210
Pencil and eraser.....	W. P. Evans and L. D. Benner.....	47, 406
Pencil and pen case.....	F. W. Cox.....	48, 374
Pencil and pen case.....	W. S. Hicks.....	49, 788
Petroleum, benzole, &c., Deodorising.....	J. Green.....	46, 794
Petroleum, Burnalol.....	E. McKinney.....	48, 967
Petroleum, &c., Distillation of.....	J. I. Vaughan.....	49, 689
Petroleum, &c., Distilling.....	E. Braggins.....	46, 633

Rails, Railroad, Rolls for rolling.....	A. J. Gustin.....	50, 816
Rails of railroads, Straightening.....	J. Johnson.....	47, 208
Rail box for railroad.....	A. J. Warren.....	51, 635
Rail joint, Railroad.....	G. M. Ramsay.....	46, 388
Railroad.....	R. Montgomery.....	46, 482
Railroad, Track cleaner for.....	G. C. Sharp.....	50, 634
Railroad box rail.....	O. G. Warren.....	51, 635
Railroad cars, for starting.....	T. R. Sinclair.....	51, 696
Railroad frogs.....	G. G. Hickman.....	48, 400
Railroad rail joint.....	K. W. King and T. C. Hargrave.....	49, 763
Railroad tracks, Preventing snowdrift on.....	L. D. Walrad.....	48, 464
Railway.....	P. Osgood.....	48, 976
Railway, Marine.....	W. F. Channing.....	46, 876
Railway frogs.....	W. Wharton.....	48, 859
Railway frogs.....	T. Sharts.....	49, 162
Railway trains with water, Supplying.....	L. H. Lescott.....	50, 013
Raisins, Removing seeds from.....	H. Locke.....	51, 901
Rakes, Grain.....	E. G. Warner.....	48, 606
Rakes, Harvester.....	J. H. Jones.....	49, 530
Rakes, Harvester.....	W. F. Cochran.....	50, 066
Rakes, Harvester.....	J. Poulson, jr.....	50, 155
Rakes, Harvester.....	J. M. Randie.....	50, 388
Rakes, Harvester.....	J. Bacon.....	50, 529
Rakes, Hay.....	T. Wilmer.....	49, 673
Rake, Hay, Horse.....	G. W. King.....	47, 553
Rakes, Hay, Horse.....	H. Tinsion.....	47, 547
Rakes, Hay, Horse.....	J. Crel in.....	47, 703
Rakes, Hay, Revolving.....	E. Calderwood.....	46, 447
Rakes, Horse.....	J. C. Stoddard.....	45, 769
Rakes, Horse.....	D. D. Gitt.....	45, 930
Rakes, Horse.....	A. B. Sprout.....	45, 942
Rakes, Horse.....	E. Huber.....	46, 001
Rakes, Horse.....	E. C. Martin.....	46, 009
Rakes, Horse.....	H. Albright.....	46, 435
Rakes, Horse.....	J. Pennypacker.....	46, 583
Rakes, Horse.....	G. E. Burt.....	46, 776
Rakes, Horse.....	J. M. Jay.....	47, 371
Rakes, Horse.....	P. S. Carver.....	47, 519
Rakes, Horse.....	J. D. Jones.....	47, 644
Rakes, Horse.....	J. Lacy.....	47, 736
Rakes, Horse.....	O. E. Randall.....	47, 857
Rakes, Horse.....	M. Smith.....	47, 672
Rakes, Horse.....	D. Prest.....	47, 980
Rakes, Horse.....	A. B. Sprout.....	48, 109
Rakes, Horse.....	D. G. Hensley.....	48, 179
Rakes, Horse.....	R. J. Robeson.....	48, 629
Rakes, Horse.....	J. Hollingsworth.....	48, 944
Rakes, Horse.....	S. M. Sherman.....	49, 164
Rakes, Horse.....	F. Holden.....	49, 269
Rakes, Horse.....	F. Seidle.....	49, 926
Rakes, Horse.....	H. C. Whitney.....	50, 060
Rakes, Horse.....	G. Palmer.....	50, 269
Rakes, Horse.....	W. F. Johnston.....	50, 363
Rakes, Horse.....	A. V. Rider.....	50, 391
Rakes, Horse.....	C. W. Warner.....	50, 525
Rakes, Horse.....	G. E. Burt.....	50, 537
Rakes, Horse.....	A. C. Stone.....	50, 853
Rakes, Horse.....	A. C. Stone.....	51, 097
Rakes, Horse.....	D. G. Husey.....	51, 187
Rakes, Horse.....	S. Bingham.....	51, 287
Rakes, Horse.....	W. King.....	51, 322
Rakes, Horse.....	R. A. Graham.....	51, 450
Rakes, Horse.....	D. P. Sharpe.....	51, 486
Rakes, Horse.....	M. D. Wells.....	51, 503
Rakes, Horse, and hay spreader, Combined.....	G. N. Palmer.....	51, 473
Rake teeth, Horse.....	A. B. Sprout.....	49, 800
Rakes for harvesters.....	M. A. Keller.....	46, 565
Rakes for harvesters.....	M. J. and R. Case.....	49, 976
Rakes for harvesters, Automatic.....	W. N. Whiteley, Jr.....	49, 689
Rakes and reels for harvesters, Combined.....	S. Johnson.....	46, 300
Ram holder.....	S. J. Olmsted.....	43, 080
Rammers for revolving fire-arms.....	F. D. Newbury.....	46, 131
Range.....	E. Whiteley.....	50, 977
Range, Cooking.....	C. J. Shephard.....	47, 045

Invention or Discovery.	Name of Patentee.	No.
Range, Cooking	E. G. Niles	48, 712
Range, Cooking	M. Pond	49, 001
Range, Cooking	M. C. Hull	50, 933
Ratchet brace	L. H. Olmsted	47, 446
Ratchet and pawl, Automatic	O. Gilder	46, 791
Ratchet or pawl, Feed wheels as substitutes for	O. C. Phelps	47, 126
Reamer, Bung-hole	L. Gray	51, 451
Reamer and drill for oil and other wells	J. Burns	51, 138
Reapers, Binding attachments to	J. M. King	49, 889
Reaping machine	D. Wolf	46, 169
Reaping machine	H. W. Bill	46, 630
Reaping machine	J. O. Brown, A. Ingham, and T. T. Lomont	49, 077
Reaping machine	H. Fisher	49, 194
Reaping machine, Binding attachment for	J. Behel	49, 970
Reaping machine, Binding attachment to	J. S. Jones	48, 690
Reaping machines, Guard finger for	A. Winterburn	48, 473
Reaping and mowing machines	T. Swain	45, 798
Reaping and mowing machines	O. T. Holbrook	45, 827
Reaping and mowing machine	T. Welch	49, 184
Reel, Expandible, for warp dressing and weaving	A. J. Nichols	46, 381
Reel, Fishing-line	W. M. Stewart	49, 663
Reels for harvester	E. P. Russell	47, 338
Relector, Fastening for, Adjustable	S. D. Ingram	49, 525
Relector for lamp and gas burners	J. Redding	51, 344
Refrigerator	T. S. Blake and O. E. Mosher	45, 690
Refrigerator	O. E. Mosher	47, 123
Refrigerator	L. D. Bunn	47, 617
Refrigerator	A. Forbes and J. Macbeth	51, 035
Refrigerators, packing and preserving houses, and other similar structures, Cooling	D. E. Somes	46, 395
Refrigerator for preserving articles of food	D. E. Somes	46, 277
Refrigerator or house for preserving animal and vegetable substances	J. H. Fisher	49, 098
Refrigerators and condensers	W. A. Lighthall	46, 368
Refractors, Grain	J. T. Wiley	49, 817
Registers, Passenger	E. Hackett	46, 063
Registers for counting revolutions	V. Giroud	48, 927
Register for libraries	W. T. Itay	49, 788
Register for street cars	J. B. Greenhut	51, 453
Register and summer piece, Combined	S. S. Bent	45, 688
Registering the number of shoes soled by a sewing machine	A. J. Tewksbury	50, 643
Regulators, Gas	C. M. Cresson	47, 169
Regulators, Electro-magnetic	F. F. A. Achard	49, 843
Regulators, Valve, Safety	P. Riordan	46, 142
Regulators, Water	J. W. Bishop	47, 184
Regulators for the wicks of lanterns	H. W. Bleyer	48, 254
Rein-holder	T. L. Tripp	49, 806
Rein-guards for vehicles	C. B. Guy	51, 041
Rein and back-strap holder, Combined	J. Bullene, Jr.	51, 430
Reinforcing apparatus	C. E. Gray	46, 793
Reservoir for beer, wine, &c.	M. Tschirgi	47, 347
Reservoir for compressed air	L. Ransom	49, 787
Resorts, Clay, Decarbonizing	G. W. Edge	49, 989
Resorts, Gas or other	J. Chilcott	45, 908
Resorts, Gas, Head-necks and connections of	J. Chilcott	49, 231
Resorts, Gas, Incrustation from, Removing	A. J. White	49, 329
Resorts for distilling petroleum	G. H. S. Duffus	46, 088
Resorts for distilling petroleum	G. H. S. Duffus	46, 089
Resorts for distilling petroleum	G. H. S. Duffus	46, 090
Ribbons, tapes, and threads for use, Arranging	M. B. Westhead	50, 318
Ribbons for hand-stamps, Composition for preparing	H. Holt	47, 494
Rice, Hulling, cleaning, and polishing	C. E. Rowan	46, 708
Rigging standing, Attaching shear-pole to	E. Smith	50, 046
Ring, Clinch	J. A. Coleman	48, 137
Ring, Cutting from iron	C. H. Bassett	49, 191
Ring Strap-clamp	J. Cogan	50, 688
Ripping sutures in cloth	F. B. Converse	48, 662
Rivets	J. N. Dennison	46, 297
Rivets	J. W. Smith	46, 504
Road-making device	T. T. Barber	49, 693
Road crusher	S. F. Hodge	48, 813
Rocket-drill apparatus	W. S. Fickett	47, 230
Rockets, Sky	J. W. Haddfield	51, 176
Rods, Pump and other oscillating, Protection for	L. Wilson	46, 880
Rod, Drawing-frame	J. M. Stone	47, 667
Rods for machines for preparing fibrous material for spinning, &c.	D. Read	46, 134
Rods for rolling railroad rails	A. J. Gastin	50, 816
Roller, Covering, for wringers	R. B. Hugonin	47, 227
Roller, Covering with cloth or canvas, Clamp for	H. H. Holly	51, 182
Roller, cultivator, and seeder, Combined	J. P. Long	46, 480
Roller, Dough	D. B. Baker	51, 530

Invention or Discovery.	Name of Patentee.	No.
Roller, Fluted .....	W. Weild .....	50, 997
Rollers, Guide for .....	H. Waters .....	48, 466
Rollers, Leather .....	D. H. Priest .....	50, 079
Rollers, Mill .....	W. S. Seymour .....	50, 581
Roller, plaster, and seed sower, Combined .....	H. S. Babcock and S. H. Jenks .....	45, 686
Roller, Printers', Retining the surface of .....	C. Sentell .....	48, 453
Roller, Seeding machine and drag, Combined .....	W. H. Hartman .....	48, 063
Roller, Spring .....	J. and G. S. Goodspeed .....	46, 896
Roller, Washing .....	H. L. Meservy .....	49, 282
Roller, Washing .....	J. E. Atwood .....	49, 359
Roller-cleat for trunks .....	J. A. Lieb and J. Schmadel .....	47, 114
Roller crushing machine .....	A. Hitchcock .....	50, 247
Roller for cotton-gins .....	I. F. Brown .....	45, 695
Roller for trunks .....	J. Schmadel and J. A. Lieb .....	48, 214
Roller of washing machines, Covering .....	R. B. Hugunin .....	50, 712
Roller and corn-planter, Combined .....	P. Courad .....	46, 083
Roller and drag, and seeding machine, Combined .....	W. H. Hartman and S. Sheller .....	45, 825
Roller and harrow, Combined .....	W. H. Converse .....	47, 090
Roller and harrow, Combined .....	W. R. Mears .....	50, 259
Rolling apparatus .....	E. Wassell .....	48, 496
Rolling irregular forms .....	J. Dodge .....	48, 915
Rolling-pin .....	C. E. Phillips .....	47, 979
Rolling-pin .....	G. L. Wittall .....	50, 528
Rolling-pin and cake-cutter .....	I. N. Pyle .....	50, 732
Rolling tapering bars or plates of metal .....	J. Holmes .....	48, 866
Roofs, the decks of vessels, &c., Applying covering to .....	J. Hall .....	48, 060
Roofing .....	J. W. Kingman .....	45, 723
Roofing, Mastic, Preparing .....	R. Skinner, G. Duncan, and C. Merighi .....	50, 177
Roofing, tubing, tanks, wainscoting boats and other structures, Material for .....	J. K. Mayo .....	51, 735
Roofing bracket .....	C. A. Kirkpatrick .....	46, 818
Roofing composition .....	W. L. Potter .....	46, 495
Roofing composition .....	N. Groh .....	47, 416
Roofing composition .....	L. Groneweg, J. H. Pulte, and C. F. Jones .....	51, 309
Roofing material, Preparing .....	A. Robinson .....	48, 311
Rooms or buildings for preservation of food and for other purposes .....	D. E. Sones .....	46, 276
Root cultivator and weeder .....	C. Jarvis .....	45, 831
Ropes, cards, &c., Making .....	J. O. Matthias .....	46, 057
Rosin, oil, spirits of turpentine, and other products from pine wood, Obtaining .....	A. H. Emery .....	46, 092
Rosin, Substitute for .....	D. T. Wilson .....	48, 634
Roving frames .....	T. Mayor .....	46, 530
Rowlocks .....	J. W. Norcross .....	46, 132
Rowlocks .....	J. W. Norcross .....	46, 816
Rowlocks .....	J. W. Norcross .....	48, 975
Rowlocks .....	I. C. and F. W. Flagg .....	49, 395
Rowlocks .....	P. W. Neefus .....	50, 264
Rowlocks .....	M. L. Bubb .....	50, 517
Rowlocks .....	I. C. and F. W. Flagg .....	51, 039
Rubber, &c., Cutting .....	E. Hubner .....	47, 421
Rubber, Hand .....	D. D. Parmelee .....	48, 993
Rubber, Hard, Article made of .....	G. S. Rice .....	47, 457
Rubber, Hard, or vulcanite .....	D. D. Parmelee .....	48, 992
Rubber, Moulding .....	J. R. Moffitt .....	51, 207
Rubber, Packing, for dental purposes .....	F. C. Brown .....	49, 969
Rubber, White .....	F. Marquard .....	51, 331
Rubber, White .....	F. Marquard .....	51, 332
Rubber rolls to shafts, Uniting .....	W. H. Grant .....	46, 464
Rubber for dental purposes .....	I. Woolworth .....	51, 642
Rudder .....	T. G. Crosby .....	45, 959
Rudder .....	J. Higbee .....	46, 723
Rudder .....	N. D. Le Pelley .....	46, 807
Rudder .....	J. Higbee .....	48, 940
Rudder with corrugated surfaces .....	S. J. Seely .....	46, 147
Rules, Carpenters' .....	B. G. Martin .....	49, 037
Rules, Folding, Joint of .....	J. A. Traut .....	48, 327
Rules, gauges, and calipers, Connecting .....	N. H. Bundy .....	49, 337
Rules, Gear cutting .....	C. B. Long .....	47, 436
Rules, Square, cutter, blotter, weight, and paper, Combination of .....	A. H. Trego .....	50, 404
Rulers .....	S. L. Simpson .....	48, 454
Rulers, Metallic .....	D. Manson .....	51, 609
Rulers, Parallel .....	E. C. Gillette .....	46, 348
Rulers, Parallel .....	W. L. Woods .....	50, 980
Ruler and paper cutter .....	J. Woodward .....	48, 756
Rolling and printing machines, Combination of .....	H. J. Hewett .....	50, 475

## S.

Saccharine liquids, Boiling and evaporating .....	D. M. Cook .....	48, 522
Saccharine liquids, Evaporating .....	B. Brown .....	46, 069

Invention or Discovery.	Names of Patentee.	No.
Saccharine solution and sirups, Treating.....	E. P. Eastwick.....	47, 402
Sacks, Catamenial.....	E. L. Perry.....	49, 915

Scraper, canal	T. Miller	46, 128
Scrapers, Grading	C. Evans and W. C. Bartlett	47, 531
Scraper, Gun, Adjustable	E. L. Pratt	46, 140
Scraper, Kettle	E. C. Fuller	50, 112
Scraper, Road	W. Patterson	47, 977
Scraper, Road	E. A. Field	48, 920
Scraper, Road	W. W. Johnson	48, 951
Scraper for cleaning gun barrels	E. L. Pratt	47, 260
Scrapping roads and cleaning gutters	N. Potter	48, 591
Screen, Ash, and coal scuttle, Combined	A. F. Carlin and L. Rockwell	50, 685
Screen, Coal	A. M. Olds	46, 019
Screen, Coal	J. A. Robinson	47, 041
Screen, Coal	W. Sparks	49, 532
Screen, Fire	H. P. Gengembre	49, 622
Screen, Grain	C. T. and J. B. Messinger	49, 429
Screws	H. A. Harvey	47, 548
Screws	H. A. Harvey	47, 549
Screws, Brass, Brazing, to iron pipes	W. B. Seale	46, 395
Screws, cutting	J. A. Merriam	49, 133
Screws, Iron, Tinning and plating	D. and H. E. Fowler	49, 586
Screws, Pressing and shaping	T. Welham	47, 236
Screws, Tap, Reversing the motion of	L. Yale, Jr	48, 476
Screws, Threading	H. A. Harvey	51, 179
Screws, Wood, Shaving and nicking	D. M. Robertson and J. A. Birdwell	47, 861
Screw-cutting machine	S. W. Goodyear	46, 846
Screw-cutting machine	J. R. Brown	51, 257
Screwdrivers	W. G. A. Bonwill	50, 338
Screwdrivers	J. S. McCurdy	50, 021
Screwdrivers, Manufacturing	G. Parr	45, 854
Screwdriver and tweezer	D. F. Hartford	47, 102
Screw-nicking machine	J. A. Bidwell	45, 946
Screw plates	J. Jennings and G. C. Sweet	46, 676
Screw propeller blades	C. C. Gates	51, 446
Screw steam-valve cocks	S. D. Fales	47, 097
Screw thread-cutting tool	C. Dreher	51, 688
Screw for fastening railroad rails	A. Arnold	46, 842
Scrubbing knuckle-shield	C. A. Moore	49, 291
Scuttle, Coal	S. B. Sexton	46, 148
Scuttle, Coal	T. Smith	50, 744
Scuttle, Coal	H. S. Pratt	50, 853
Scuttle, Coal	M. L. Byron	51, 139

Invention or Discovery.	Name of Patentee.	No.
Scythes, Blanks for	H. Waters	47, 589
Scythes, Fastening for	W. C. Barker	49, 822
Scythe fastening	M. R. Flanders	46, 458
Scythe snaths	S. B. Batchelor	50, 891
Scythe snaths, Bending	A. S. Philbrook	50, 272
Seats, beds, &c., Elastic supports for	J. Perry	50, 840
Seat, Car	E. F. Shoenberger	45, 759
Seat, Car	E. Lockwood and G. W. Pitman	48, 191
Seat, Car, Railroad head rest for	N. Gates	48, 270
Seat, Car, Railroad head rest for	W. R. Phelps	48, 586
Seat, Car, Railway	G. W. Sayre	47, 342
Seat, Chair	E. Ransom	50, 955
Seat, Folding, for wheel vehicles	H. A. Gilbertson	49, 872
Seat, Spring, for wagons	T. J. Alexander	50, 785
Seat, Wagon, Turnout	G. Gregory	51, 780
Seat for drivers and conductors of street cars	T. C. Hamby	50, 819
Seat for water-closets	J. N. Davis	49, 731
Seat for water-closets	E. Woodruff	50, 064
Seat and desk, School	W. Disbrow	47, 099
Seat and fountain, Combined rotating, for barber shop	J. Meyer	49, 533
Seat and school desk	J. P. Allen	46, 980
Seat and valise, Combined	S. P. Holden	46, 187
Sediment extractor for steam boilers	E. Thayer	47, 238
Seed, Cotton, Cleaning	J. G. Page	51, 745
Seed separator, Grain and grass	J. B. Wallace	48, 329
Seed sower	J. M. Harshbarger	45, 923
Seed sower and stalk cutter, Combined	B. A. Grant	49, 997
Seed and plaster sower and roller combined	H. S. Babcock and S. H. Jenks	45, 686
Seeder, Broadcast	J. Davis	50, 916
Seeder, cultivator, and potato planter, Combined	B. F. Field	50, 202
Seeder, cultivator, and roller, Combined	J. P. Long	46, 480
Seeder and cultivator combined	C. Norwood	47, 975
Seeder and cultivator combined	S. Keller	48, 871
Seeder and harrow	D. L. and J. M. Barlow	45, 903
Seeding machines	J. M. Follett	45, 707
Seeding machines	W. H. Crichton	45, 817
Seeding machine	W. Saxton	46, 271
Seeding machine	C. Foster	46, 444
Seeding machine	S. D. Cook and H. J. Webb	46, 544
Seeding machine	W. N. Bates	46, 626
Seeding machine	M. S. and J. R. Cadwell	46, 877
Seeding machine	C. H. Eggleston	46, 889
Seeding machine	J. Fowler and F. M. Bacon	47, 009
Seeding machine	C. C. Carter	47, 518
Seeding machine	S. M. Prentice	47, 853
Seeding machine	C. Krogh	48, 566
Seeding machine	R. Burns	48, 635
Seeding machine	E. D. and O. B. Reynolds	49, 302
Seeding machine	B. Wieland	49, 460
Seeding machine	J. Shafer	49, 557
Seeding machine	M. Clark	49, 720
Seeding machine	H. D. Dunn	49, 730
Seeding machine	H. Williams	49, 818
Seeding machine	B. F. Field	50, 201
Seeding machine	W. H. Hartman	51, 178
Seeding machine	J. B. H. Whiting	51, 768
Seeding machine, Attaching drill teeth to	J. H. Thomas and P. P. Mast	46, 732
Seeding machine, Broadcast	G. W. Warren	45, 775
Seeding machine, Broadcast	E. S. Jewett	48, 949
Seeding machine and cultivator	T. A. Gale	48, 269
Seeding machine and cultivator, Combined	O. M. Pond	48, 590
Seeding machine, roller, and drag, Combined	W. H. Hartman and S. Sheller	45, 825
Seeding machine, roller, and drag, Combined	W. H. Hartman	48, 063
Self-indicator for raising sunken vessels, &c	T. P. Edson	48, 539
Separator, Grain and grass seed	J. B. Wallace	48, 329
Sewing machine	W. Weltling	45, 777
Sewing machine	C. Cadwell	45, 972
Sewing machine	J. W. Bartlett	46, 064
Sewing machine	J. B. McCurdy	46, 303
Sewing machine	M. J. Stein	47, 696
Sewing machine	G. Rehfuess	47, 905
Sewing machine	A. Wittneben	48, 007
Sewing machine	L. Planer	48, 204
Sewing machine	J. J. Sibley	48, 248
Sewing machine	J. McClosky	48, 345
Sewing machine	E. F. Bradford and L. L. Barber	48, 511
Sewing machine	J. Zukerman	49, 023
Sewing machine	T. J. Halligan	49, 262
Sewing machine	J. L. Frey	49, 745
Sewing machine	J. N. Tarbox	49, 803
Sewing machine	C. Hale	50, 117
Sewing machine	L. Planer	50, 157
Sewing machine	T. D. Ballou	50, 287
Sewing machine	J. Chilcott	50, 451

Skirt lining, Fabric for.....	C. Spannagel.....	50, 317
Skiving and splitting machine.....	W. S. Marsh.....	48, 964

Invention or Discovery.	Name of Patentee.	No.
Plate, School.....	J. La Bar.....	51, 114
Plate frames, Edges of, Dressing.....	J. W. Sayre and A. C. Schull.....	50, 170
Pleds.....	J. Stevens.....	45, 574
Plids, Boys'.....	D. G. Hussey.....	48, 178
Plids, Children's.....	D. G. Hussey.....	51, 188
Plids or carriages.....	H. Smith.....	47, 580
Plights.....	I. Stephenson.....	48, 736
Plights, Cutter.....	A. Arneuman.....	50, 572
Plight-bell attachment.....	W. E. Barton.....	48, 040
Plight-bells to straps, Attaching.....	W. E. Barton.....	46, 523
Plies, Bread and meat.....	H. M. Shaw and C. B. Stillwell.....	46, 150
Plies, Bread and meat.....	J. E. Dow.....	46, 229
Plies, Bread and meat.....	J. D. Hall.....	46, 350
Plies, Bread and vegetable.....	S. E. Blake.....	45, 689
Plies, Meat and vegetable.....	G. B. Pullinger.....	45, 751
Plies, Vegetable.....	S. Walker.....	48, 118
Plugs, Knapsack.....	J. T. Warren.....	46, 410
Slipper Carpet.....	D. Bowker.....	48, 768
Stop-pail and coal-hod, Combined.....	C. Jones.....	48, 020
Slash, Grease from, Separating.....	D. H. Kaufmann.....	48, 559
Smelting and melting furnace.....	W. Quann and W. T. Smith.....	51, 266
Smoothing stone or implement.....	J. E. Tucker.....	49, 956
Soap-book.....	H. Mund.....	47, 972
Soap-link.....	C. W. Saladee.....	50, 167
Soap.....	D. F. Packer.....	46, 517
Soap.....	J. B. Bennett and J. S. Gibbs.....	47, 385
Soap.....	F. Kuukel.....	50, 877
Soap.....	W. Neece.....	51, 119
Soap, Cutting.....	J. G. Perry.....	45, 746
Soap, Fillers, Manufacture of.....	J. F. Rich.....	46, 143
Soap composition.....	E. Sprague.....	50, 180
Soap frames.....	D. Whitaker.....	48, 753
Soap liquid.....	W. Sheppard.....	49, 561
Sockets for hose, chisel, &c.....	G. Banister.....	48, 505
Soda, Carbonate of, bleaching powder, chlorine, and other products, Preparing.....	T. Macfarlane.....	49, 597
Soda fountains.....	F. J. Chapman.....	49, 719
Soda fountains, Syrup stand for.....	C. M. Berry and C. C. Sheldrake.....	49, 335
Soda-water, &c., Cooling.....	I. Bigelow.....	51, 130
Soda-water apparatus, Acid chamber of, constructing the.....	W. Gee.....	49, 871
Soda-water apparatus.....	F. A. Weber and W. H. Greene.....	46, 353
Soda-water apparatus.....	J. Matthews, Jr.....	50, 235
Soda-water apparatus, Draught cock for.....	L. D. Hoyt and R. Murray.....	48, 489
Soda-water apparatus, Draught tube for.....	F. A. Weber and W. H. Greene.....	46, 284
Soda or potash from alkaline silicates, Liberating.....	E. O. Ward.....	46, 979
Soda.....	J. W. Moyer.....	46, 014
Sofa bed, and crib.....	S. Chaplin.....	46, 879
Sofa bedstead.....	E. Brady.....	47, 512
Sofa bedstead.....	F. Koller.....	49, 120
Sofa bedstead, Extension.....	J. Kens.....	50, 339
Sofa or lounge.....	E. Smith.....	50, 397
Soil, Pulverizing.....	E. S. Pithian.....	46, 048
Soldering iron.....	W. K. Lewis.....	47, 965
Sole, Channelled.....	G. McKay.....	48, 228
Sole, Shoe, Voltaic.....	T. Hall.....	46, 234
Sole, water-proof.....	J. F. Colburn.....	48, 481
Sole for boots and shoes, Cutting.....	J. H. Walker.....	49, 572
Solution to oil barrels, &c., Applying.....	J. O. Woodruff.....	50, 649
Sorghum, Stripping.....	R. C. Wilcox.....	49, 576
Sorghum, Sugar, wine and oil from, Manufacture.....	J. Myers.....	47, 321
Sorghum evaporator.....	D. H. Iseninger.....	47, 030
Sorghum evaporator.....	J. B. Kewey.....	47, 921
Soup, Deadening.....	F. Fearon.....	48, 350
Soup, Tomato.....	J. H. W. Huckins.....	47, 545
Spades, Rotary.....	C. Comstock.....	46, 995
Spade-saw, Cutting and punching.....	H. Chomstock.....	50, 416
Spading machine.....	W. R. Means.....	49, 542
Spark arrester.....	A. Prunmann.....	46, 307
Spark arrester.....	A. Prunmann.....	46, 308
Spectacles, Frame for.....	J. E. Spencer and E. Want.....	49, 954
Spectrum, Heliographic and photographic, for producing line engravings.....	F. Von Egloffstein.....	51, 103
Spike.....	D. R. Pratt.....	51, 265
Spike, Drawing.....	N. Adams.....	49, 690
Spike, Drawing, Tool for.....	G. Stone.....	46, 154
Spike, Railroad.....	W. M. Storm.....	48, 494
Spindle bearing for spinning, Lubricating.....	G. W. Briggs.....	47, 278
Spindles of wagon axles.....	J. M. Jay.....	47, 769
Spinning, Bobbins for.....	J. Goulding.....	50, 116
Spinning, Bobbin holder for.....	J. Goulding.....	50, 940
Spinning, Bobbin holder for.....	J. Goulding.....	50, 941
Spinning, Bobbin holder.....	E. Wright.....	50, 311
Spinning, &c., Rolls for preparing fibrous material for.....	D. Read.....	48, 134
Spinning, Self-acting mules for.....	A. H. Cummock.....	49, 861

Invention or Discovery.	Name of Patentee.	No.
Spinning bobbins.....	W. Murdock.....	51, 340
Spinning frames, Self-lubricating spindle bolsters of.....	S. T. Bartlett.....	47, 271
Spinning frame, Self-oiling spindle bolsters for.....	W. F. Rippon and T. R. Robinson.....	45, 752
Spinning frames, Upper bearings or bolsters for spindles of.....	M. D. Drake.....	47, 193
Spinning jack.....	H. L. Moulton.....	50, 084
Spinning jack.....	A. and G. Simpson.....	50, 044
Spinning machines.....	T. Pye.....	46, 386
Spinning machine.....	J. Rich.....	46, 588
Spinning machine.....	W. Eberhard.....	48, 917
Spinning machine.....	J. Eaton.....	49, 988
Spinning machine.....	J. Byrkit.....	50, 094
Spinning machine.....	M. Hulings.....	51, 054
Spinning machines, Paper cop tube for.....	W. J. Innis.....	50, 204
Spinning machines, Thread guides for.....	E. D. Hurst.....	45, 718
Spinning rollers.....	I. and G. S. Good-speed.....	46, 896
Spirits, Distilling.....	A. Krenslar and W. T. Pelton.....	50, 876
Spirits and other distillates, Measuring and testing.....	E. Fayne.....	46, 058
Spirits and other liquids, distilling.....	F. Haeck.....	51, 403
Spirometers.....	A. P. Barnes.....	51, 002
Spittoons.....	L. W. Barguet.....	49, 493
Spittoons for dental chairs.....	W. W. Butler.....	51, 552
Spittoon and foot warmer, Combined.....	G. B. Clarke.....	47, 280
Splitting and skiving machine.....	W. S. Marsh.....	48, 964
Spoke, Tenoning.....	L. A. Dole.....	50, 768
Spoke machines.....	J. Foster.....	49, 341
Spoke shave.....	S. S. Mowry and A. G. Bates.....	51, 339
Spoke in wagon wheels, Setting.....	R. Walker.....	51, 765
Sponge, Preparing, for stuffing, padding, &c.....	A. F. Molth.....	48, 970
Spool, Heads to, Fastening the.....	L. N. Parks.....	47, 658
Spools, Jack.....	D. R. Day and J. G. Folsom.....	4, 507
Spools for winding yarn for beaming.....	B. Saunders.....	50, 399
Spools and shuttles of sewing machines, Delivery of thread from.....	W. Weetling.....	46, 513
Spoon.....	R. Humphrey.....	46, 907
Spoon, Ear, knife, and tweezer combined.....	R. C. English.....	50, 106
Spoon, Invalid.....	D. J. Pearson.....	51, 748
Spoon, knife, and fork-holder.....	G. L. Morse and L. Herrick.....	46, 682
Spoon, Metal, Sheet.....	J. Fellows.....	48, 164
Spoon, Metal, Sheet.....	J. Fellows.....	49, 471
Spouts, Funnel, Corrugated.....	J. Walton.....	46, 162
Spouts, Sap.....	A. Leitch.....	48, 961
Spout or tubes, Metallic.....	E. Valentine and M. T. Rider.....	49, 045
Spout and strainer, Combined.....	W. Polyblank.....	49, 650
Spring.....	T. Shaw.....	47, 663
Spring.....	J. C. Plumer.....	49, 786
Spring, Bumper.....	R. Levington.....	45, 927
Spring, Car.....	A. Buchanan.....	45, 696
Spring, Car.....	W. Cox.....	45, 815
Spring, Car.....	G. A. Riedel.....	47, 373
Spring, Car.....	J. Murray.....	47, 084
Spring, Car.....	T. F. Allyn.....	48, 250
Spring, Car.....	W. Newbauer.....	49, 137
Spring, Car.....	T. Shaw.....	49, 580
Spring, Car.....	H. N. Black.....	50, 415
Spring, Car.....	G. Douglas.....	50, 807
Spring, Car.....	J. J. C. Smith.....	50, 849
Spring, Car.....	J. J. C. Smith.....	50, 850
Spring, Car.....	R. Vose.....	51, 368
Spring, Car, Railroad.....	W. F. Converse.....	49, 086
Spring, Carriage.....	A. J. Ritter.....	48, 444
Spring, Carriage.....	H. H. Olds.....	49, 545
Spring, Carriage.....	A. Selkirk.....	50, 209
Spring, Carriage.....	T. Taylor.....	50, 836
Spring, Carriage, braces for.....	C. C. Gleason.....	50, 114
Spring, Coiling.....	G. L. Turner.....	47, 862
Spring, Coupling, Gum-elastic.....	S. M. Hoover.....	47, 305
Spring, Elastic, Straightening.....	J. W. Gray and C. H. Curtis.....	46, 421
Spring, Furniture.....	W. C. Wyckoff.....	51, 644
Spring, Main, of watch, Contracting barrels of.....	A. S. Clackner.....	49, 978
Spring, Rubber, for wagons.....	S. G. Clough.....	51, 697
Spring, Spiral.....	F. C. Payne.....	50, 622
Spring, Steel, Tempering.....	W. Hughes.....	49, 108
Spring, &c., Steel, Tempering, Compound for.....	L. W. Kelley.....	51, 728
Spring, Window.....	E. K. Breckenridge.....	46, 874
Spring, Wire, Flat.....	H. Kellog.....	50, 420
Spring, Volute.....	J. Freeland and D. Ward.....	46, 655
Spring bed-bottoms.....	G. E. Lord.....	46, 119
Spring bolt-catch.....	G. M. Norris.....	47, 741
Spring catch for doors.....	J. C. Plumer.....	46, 697
Spring horse.....	H. F. Metzler.....	46, 529
Spring punch.....	P. Bauer.....	49, 364
Spring slat for bed bottoms.....	J. M. French.....	51, 443
Spring for bedsteads.....	D. Manuel.....	51, 516
Spring for furniture.....	D. Hawkins.....	50, 471

Invention or Discovery.	Name of Patentee.	No.
Spring for upholstering purposes .....	W. H. Mallory .....	49, 476
Spruce, Moulders' .....	M. R. Howell .....	45, 716
Spar carrier, boat drawer, and pantaloons guard, Combined .....	E. P. Watson .....	45, 776
Spurring or driving horses .....	J. Davis .....	50, 803
Square, Carpenters', Indicating .....	H. K. Jones .....	46, 191
Square, level, compass, and plumb staff, Combined .....	J. R. Abbott .....	51, 675
Square, rule, cutter, blotter, and paper weight, Combination of .....	A. H. Trego .....	50, 404
Square, Try .....	J. Williams .....	49, 670
Stacker, Chaff and straw .....	W. H. Loomis .....	46, 918
Staging for buildings .....	W. Arronquier .....	47, 179
Staging for building purposes .....	E. D. Walker .....	49, 017
Stair-rod .....	W. F. Merseman .....	48, 895
Stair-rod .....	H. M. Hoover .....	49, 270
Stair-rod fastening .....	H. Jackson .....	47, 432
Stake, Attaching to railroad cars .....	J. Fortune .....	51, 277
Stalk, Cutting .....	J. B. Ryder .....	48, 312
Stalk and stubble in field preparatory to ploughing, Cutting .....	G. W. Wilson .....	51, 507
Stamp, Cancelling .....	J. W. Foster .....	45, 708
Stamp, Cancelling .....	M. P. Norton .....	49, 432
Stamp, Hand .....	G. J. Hull .....	45, 893
Stamp, Hand .....	T. S. Hudson and A. Hardy .....	48, 338
Stamp, Hand .....	H. Holt .....	48, 624
Stamp, Hand .....	D. H. Chamberlain .....	49, 084
Stamp, Hand .....	S. J. Smith .....	49, 452
Stamp, Hand .....	A. Jones .....	50, 715
Stamp, Hand, Composition for preparing ribbons for .....	H. Holt .....	47, 494
Stamp, Hand, and canceller .....	J. B. Secor .....	50, 501
Stamp, Hand, and embossing press .....	W. Burrows .....	50, 556
Stamp, Hand, for printing .....	D. H. Chamberlain .....	46, 076
Stamp, &c., Inking .....	C. M. Wetherill .....	49, 038
Stamp, Ore-crushing .....	H. I. Behrens .....	50, 326
Stamp, Ore-crushing .....	F. Dart .....	50, 342
Stamp, Postage .....	G. W. Bowlby .....	51, 782
Stamp, Postage and revenue .....	S. W. Francis .....	48, 389
Stamp, Postage and revenue .....	C. S. Wells .....	50, 058
Stamp, Postage and revenue, Cancelling .....	T. S. Hudson .....	51, 053
Stamp, Revenue .....	R. L. Smith .....	47, 464
Stamping machines, and spring and weight piston engines .....	E. F. McFarland .....	51, 737
Stanchions, Cattle .....	H. Maycock .....	45, 728
Stand, Flower .....	P. B. Sheldon .....	47, 664
Stand, Milk .....	A. R. Titus .....	49, 321
Stand, Music .....	J. David .....	50, 460
Stand, Photographic-camera .....	H. Manger .....	48, 193
Stand, Sirup, for soda fountain .....	C. M. Berry and C. C. Sheldrake .....	49, 335
Stand, Work, Ladies' .....	J. B. Atwater .....	48, 888
Stand for ladies' cloaks .....	J. R. Palmenberg .....	48, 989
Stand for ladies' figures .....	J. R. Palmenberg .....	48, 145
Stand for latches .....	H. D. Stover .....	50, 510
Stand for preserve jars .....	K. E. Ashley .....	50, 674
Stretching and glazing cords, braids, &c. ....	D. McInroy .....	51, 471
Staves, Cutting .....	H. M. Shaw .....	46, 149
Staves, Cutting .....	J. I. Ralya .....	50, 782
Stave-cutting machine .....	M. Randolph .....	48, 028
Stave machines .....	J. W. Bowers .....	46, 068
Stave machines .....	C. G. Dibble .....	46, 548
Stave machines .....	P. Worum .....	48, 468
Stave machine .....	G. R. Hay .....	48, 486
Stave machine .....	J. S. Thompson .....	49, 320
Stave mangle .....	J. P. Dorman .....	49, 245
Steam, Blowing off .....	P. Taltavull .....	49, 318
Steam-heating and fire-extinguishing apparatus .....	C. S. Brown .....	46, 328
Steel .....	S. W. Young .....	49, 050
Steel .....	J. Baur .....	49, 495
Steel, Articles of, Sharpening and hardening .....	W. Rowland .....	51, 087
Steel, Bessemer, Gun barrels, &c., from .....	J. Thompson .....	51, 281
Steel, Cast, Making .....	S. W. Wood .....	46, 041
Steel, Hardening and tempering .....	E. Savage and H. Stratton .....	48, 213
Steel, Manufacture of .....	E. P. Hudson .....	45, 828
Steel, Manufacture of .....	J. Baur .....	47, 510
Steel, &c., Manufacture of .....	R. Mushet .....	49, 487
Steel, Manufacture of .....	J. Deby, A. Trippel, and E. Gaussoin .....	50, 804
Steel, Refining and hardening .....	W. Roscoe .....	50, 039
Steel and iron .....	H. Bessemer .....	49, 051
Steel and iron .....	H. Bessemer .....	49, 052
Steel and iron .....	H. Bessemer .....	49, 053
Steel and iron .....	H. Bessemer .....	49, 055
Steel and iron, Bars, Shafts, and other articles of .....	C. Sanderson .....	50, 084
Steel or iron, Cast, Uniting with wrought or cast iron surfaces .....	J. D. Whelpley and J. J. Storer .....	50, 976
Steel and iron, Malleable .....	H. Bessemer .....	51, 399
Steel and iron, Malleable .....	H. Bessemer .....	51, 400
Steel and iron, Malleable .....	H. Bessemer .....	51, 401
Steel and iron, Manufacture of .....	G. Parry .....	47, 506
Steel and iron, Manufacture of .....	J. Henderson .....	50, 474

Invention or Discovery.	Name of Patentee.	No.
Steel and Iron, Manufacture of.	H. Bessemer.	51, 397
Steel and Iron, Manufacture of.	H. Bessemer.	51, 398
Steering apparatus.	A. H. North.	48, 067
Steering apparatus.	N. Richardson.	49, 196
Steering apparatus.	G. Coffin.	49, 233
Steering apparatus.	P. W. Robinson.	51, 481
Stencil plates, Applying paint to	C. Bates.	47, 917
Stereoscope.	S. D. Goodall.	48, 807
Stereotyped plates, Casting.	W. F. Draper.	51, 437
Still, Settling.	L. S. Fales.	49, 740
Still, for distilling petroleum.	J. Bibby and A. Lapham.	48, 286
Still, for distilling petroleum.	J. Rogers.	50, 276
Still, for oil, &c.	C. A. Hardy.	46, 899
Stirring and cooling apparatus.	A. G. Knapp.	46, 476
Stirrup.	C. W. Saladee.	46, 711
Stirrup.	C. W. Saladee.	46, 712
Stirrup.	J. S. Gould.	49, 403
Stirrup, Saddle.	A. Iron.	50, 007
Stirrup fastening.	C. H. Wellman.	49, 813
Stirrup fastening, Safety.	W. Fawcett.	51, 708
Stock, Paper, Manufacture of.	W. Delton.	45, 791
Stock feeder.	T. W. Pierce.	46, 493
Stock for holding screw-cutting dies.	E. C. C. Kellogg.	47, 878
Stocking.	E. V. Sears.	50, 279
Stocks, Plane, Throat in, Dressing the	F. B. Marble.	46, 372
Stone.	R. Little.	46, 422
Stone, Artificial.	G. E. Van Derburgh.	48, 746
Stone, Artificial.	F. Ransome.	50, 315
Stone, Artificial.	F. Ransome.	50, 316
Stone, Art ficial, Solution for saturating.	G. E. Van Derburgh.	48, 747
Stone, Hay, &c., Gathering and loading.	G. W. Holley.	48, 175
Stone, Polishing and dressing.	E. H. Lewis.	47, 900
Stone breaker.	P. W. Gates and D. R. Fraser.	50, 813
Stone-cutting machinery.	G. J. Wardwell.	51, 271
Stone-cutting machinery.	G. J. Wardwell.	51, 272
Stone gatherer.	P. S. Brewster and C. M. Hines.	45, 970
Stone gatherer.	J. L. Quinby.	47, 566
Stone grinding and polishing machine.	J. Harsha.	48, 062
Stool, Piano.	G. A. Sherlock.	50, 042
Stools, Piano-forte, Base for.	T. Odell.	50, 488
Stool and chair, Barber's.	H. Renwick.	50, 032
Stop-washer for nuts.	H. N. Armstrong.	48, 353
Stopper, Bottle.	E. R. Wilber.	47, 483
Stopper for fruit jars.	J. M. Whitall.	47, 338
Stopper for jars, bottles, &c.	N. Thompson.	47, 779
Stopper for fruit jars.	C. R. Doane.	50, 806
Stopper for fruit jars.	W. Chrysler.	51, 030
Stove.	W. Wheeler.	45, 783
Stove.	T. L. Sturtevant.	46, 729
Stove.	E. A. Parker.	47, 218
Stove.	C. Townes.	47, 291
Stove.	G. W. Walker.	47, 474
Stove.	W. Bamford and J. F. Tate, jr.	48, 037
Stove.	T. Scott.	48, 240
Stove.	M. Bratt.	49, 707
Stove.	A. O. Wilcox.	50, 408
Stove, Air-tight.	J. G. Allen.	48, 144
Stove, Base-burning.	H. J. Giles.	46, 895
Stove, Base burning.	W. B. Treadwell.	47, 881
Stove, Burning.	S. B. Sexton.	47, 136
Stove, Cases for.	J. P. Driver.	50, 696
Stove, Coal.	J. Morrison, jr.	46, 483

Trusses	S. S. Ritter	49, 437
Trusses	R. E. Downie	51, 108
Trusses	J. F. Keeler	45, 634
Trusses, Car, Railroad	J. Danner	46, 085
Tub for washing and other purposes	A. Wyckoff	51, 252
Tubes, Boring	W. R. Hinsdale	49, 698
Tubes, drills, &c., Extractor of, from oil wells	F. A. Weber and W. H. Greene	46, 284
Tubes, Draught, for soda water apparatus	C. Bullock	48, 789
Tubes, Inhaling	P. L. Welmer	50, 781
Tubes, Lap-welded, Finishing	E. Valentine and M. S. Ridout	46, 311
Tubes, M-tallic	C. L. Noe	49, 544
Tubes, Oil well, Packing for	J. Parham, Jr.	49, 783
Tubes, Oil well, Packing for	G. E. Mills	49, 778
Tubes, Packing, for oil well	H. R. Koon	49, 418
Tubes, Well, Deep	H. R. and M. T. Barnes	49, 362
Tubes, Well, Deep, Sinking	P. Sicouret	49, 599
Tubes, Well, Packing for	C. W. Kinne	50, 142
Tubes, Well, Sinking	J. H. Knickerbocker	49, 765
Tube expander	S. L. Fox	45, 822
Tube packing	D. E. Rice and W. Evered	47, 983
Tube sheet cutter	W. H. Downing	47, 194
Tubes from wells, Withdrawing	J. A. Patterson	46, 818
Tubes for caves in oil or other wells	J. Newkirk	49, 295
Tubes of boilers or condensers, Packing	M. G. Wilder	47, 888
Tubes of sheet metal, Forming	T. Dutton and T. Maguire	50, 343
Tubes or pipes for wells	E. Valentine and M. T. Rider	49, 045
Tubes or spouts, Metallic	J. Daley and J. H. Marvill	46, 339
Tubes to boilers, Sealing, Tool for	J. H. Bump	51, 136
Tubes and pumps for wells	E. P. Gleason	46, 578
Tubing, Flexible	D. K. Hoxie and T. L. Reed	51, 032
Tubing, Flexible		

Invention or Discovery.	Name of Patentee.	No.
Tubing, Flexible, for illuminating gas.....	W. B. S. Taylor.....	46, 507
Tubing, Metal, Sheet.....	S. M. Cate.....	51, 017
Tubing tanks, roofing, wainscoating boats, and other structures, Material for.....	J. K. Mayo.....	51, 735
Tumblers, pitchers, &c.....	G. G. Percival.....	48, 996
Tumblers, Washing.....	B. Hart.....	48, 934
Tunnel and scale pan.....	A. A. Smith.....	50, 636
Tunnelling and mining machine.....	H. Haupt and J. Y. Smith.....	47, 168
Turn-table, Railroad.....	J. I. Kingsley.....	51, 192
Turpentine, &c.....	A. H. Emery.....	49, 249
Turpentine, Spirits of.....	J. Johnson.....	50, 132
Turpentine, Spirits of, oil, resin, and other products from pine wood, Obtaining.....	A. H. Emery.....	46, 092
Turpentine and other products from resinous wood, Extracting.....	D. Hull.....	48, 406
Turrets, Monitor, Raising by hydraulic pressure.....	S. Wilmarth.....	51, 378
Turrets and guns, Operating.....	J. B. Eads.....	46, 223
Tuyere.....	J. R. Harrington.....	46, 586
Tuyere.....	D. S. Lay.....	48, 963
Tuyere.....	W. P. Cain.....	51, 692
Tuyere, Adjustable.....	B. G. Noble.....	48, 974
Tuyere, Forge.....	R. Platt.....	48, 998
Tweezer, knife, and ear spoon, Combined.....	B. C. English.....	50, 107
Tweezer and screw-driver.....	D. F. Hartford.....	47, 102
Twine, Paper.....	J. P. Tice.....	46, 405
Twine, Paper, Manufacture of.....	E. B. Bingham.....	46, 208
Type, Flexible, and apparatus for printing.....	H. Tubensig.....	47, 262
Type, Photo-electro.....	W. A. Leggs and G. E. Desbarats.....	48, 035
Type, Printing, Scrip.....	H. J. Hewitt.....	50, 245
U.		
Umbrellas.....	J. S. Fee.....	48, 267
Umbrellas.....	G. L. Peabody.....	49, 912
Umbrellas.....	W. Damerel.....	49, 966
Umbrellas.....	H. Hotchkiss.....	50, 587
Umbrellas.....	J. H. Parsons.....	51, 616
Umbrellas, &c., Inserting glass in.....	E. A. Pond and M. S. Richardson.....	50, 492
Umbrella holders.....	J. A. Minor.....	50, 261
Uterine supporters.....	S. L. Hockett.....	49, 406
V.		
Valise, Saddle.....	R. McMurray and J. S. Topham.....	47, 028
Valise, Travelling.....	F. W. Lamouroux.....	49, 896
Valise for artillery harness.....	W. H. Wilkinson.....	47, 889
Valise and seat, Combined.....	S. B. Holden.....	46, 187
Valve.....	D. D. Allen.....	48, 883
Valve, Automatic, for steam radiators.....	J. P. Wood.....	47, 240
Valve, Balance plug.....	S. Smith and B. Pickering.....	51, 329
Valve, Balance puppet.....	R. C. Bristol.....	50, 443
Valve, Balance slided.....	C. E. Emery.....	47, 284
Valve, Core.....	G. Shield.....	50, 394
Valve, Cut-off.....	W. McClintock.....	50, 304
Valve, Cut-off.....	J. L. Albertson.....	50, 330
Valve, Cut-off, for steam engines.....	H. O. Perry.....	46, 932
Valve, Escape, for pumps.....	E. A. Floyd.....	48, 543
Valve, Globe.....	W. Chesley.....	50, 219
Valve, Governor.....	O. L. Brown.....	48, 652
Valve, Governor.....	C. W. Le Count.....	49, 422
Valve, Governor.....	R. W. Gardner and J. Robertson.....	51, 037
Valve, Governor, for steam engines.....	S. Mills.....	48, 969
Valve, Lock, for canal gates.....	J. Jerome and L. K. Cole.....	47, 643
Valve, Oscillating.....	G. Davis.....	45, 910
Valve, Pump.....	C. B. and J. Hardick.....	51, 653
Valve, Safety.....	J. Y. Smith.....	47, 889
Valve, Safety, Operating.....	W. S. Hudson.....	46, 238
Valve, Safety, for spring balances.....	T. S. Ray and S. E. Cleveland.....	51, 350
Valve, Safety, for steam generators.....	S. G. Barker.....	49, 068
Valve, Safety, for steam generators.....	R. Wood.....	50, 376
Valve, Safety, for steam generators.....	S. Nowland.....	51, 610
Valve, Slide.....	C. C. H. Brightly.....	46, 991
Valve, Slide.....	J. B. Cochrane.....	47, 932
Valve, Slide.....	J. G. Ives.....	48, 070
Valve, Slide.....	J. A. Woodbury.....	48, 611
Valve, Slide.....	A. Buchanan.....	50, 231
Valve, Slide.....	S. D. White.....	50, 527
Valve, Slide.....	H. Spangler.....	50, 746
Valve, Slide, Balanced.....	A. S. Cameron.....	48, 901
Valve, Slide, Balanced.....	J. Rankin.....	47, 453
Valve, Slide, Balanced.....	J. Rowbotham.....	51, 393
Valve, Slide, for steam engines.....	R. F. Hodge.....	49, 267
Valve, Slide, for steam engines.....	G. Thackeray.....	50, 750
Valve, Slide, for steam engines.....	C. W. Crawford.....	51, 023
Valve, Slide, for steam engines.....	A. W. Jones.....	51, 656

Invention or Discovery.	Name of Patentee.	No.
Valve, Steam	J. Johnson	49, 414
Valve, Steam regulator	G. H. Fox	48, 166
Valve, Steam, or water	C. E. Ricker	51, 221
Valve, Stop	J. McClelland	46, 571
Valve, Stop	E. Andrews	51, 533
Valve, Stop, Re-fitting	S. Wing	49, 203
Valve cocks	W. Chesley	46, 077
Valve cocks, Globe	F. Luinckenheimer	46, 665
Valve cocks, Steam, Screw	S. D. Fales	47, 097
Valve gear, Cut-off	K. H. Loomis	49, 284
Valve gear, Throttle	H. W. Warner	48, 130
Valve gear for direct-acting steam engines	W. H. Guild and W. F. Garrison	51, 454
Valve gear for oscillating engines	H. T. Carter	48, 904
Valve gear for steam engines	C. E. Gage	47, 492
Valve gear for steam engines	J. W. Maloy	48, 418
Valve gear for steam engines	A. S. Cameron	50, 218
Valve gear for steam engines	J. S. Barden	50, 414
Valve gear for steam engines	W. H. Stanton and A. D. Spencer	50, 966
Valve regulators, Safety	P. Riordan	46, 142
Valve spindles, Stuffing boxes for	T. and J. Barber	48, 147
Valve for faucets, Stop	W. Krull	49, 894
Valve for steam engines	O. T. Earle	45, 820
Valve for steam engines	J. E. Thorpe	47, 072
Valve for steam engines	A. Morton	47, 122
Valve for steam engines	J. W. Carhart	48, 902
Valve for steam engines	T. Clark	49, 858
Valve for steam engines	C. W. Tremain	50, 050
Valve for steam engines	E. Rogers	50, 344
Valve for steam engines	W. M. Henderson	51, 314
Valve for steam hamruers	J. Watt	50, 407
Valve for steam pipes	S. R. Warner	47, 073
Valve for steam pipes	A. R. Treadway and S. R. Warner	47, 057
Valve for steam radiators	F. Presser	49, 916
Valve for submarine ordnance	J. F. Cleu	46, 060
Vapors, Antiseptic, Impregnating the air of rooms with	A. J. Sax	48, 452
Vapors, Inhaling	A. P. Lighthill	47, 434
Vapors, Noxious, Disinfecting	W. Adamson	46, 317
Vapor inhalers	D. Russell	50, 735
Varnish, &c., Composition for	P. Preseott	46, 024
Vegetables, Cutting and reducing	T. J. Sloan	48, 316
Vegetables, Disease in, Composition for preventing	J. B. Tribble	46, 957
Vegetables, &c., Extracts from, Obtaining	C. Chilcott	47, 393
Vegetables, Skimming	O. Haas	48, 778
Vegetable slicer	T. Mason	48, 700
Vegetable washer	F. W. Bacon	48, 477
Vegetable washer	F. Arnold	50, 868
Vegetable or animal substances, Case for preserving during transportation	J. G. Staunton	45, 764
Vegetable and animal substances, Preserving	F. Stabler	50, 965
Vegetable and animal substances, Preserving	R. Jones	51, 280
Vehicles	Z. B. Wakeman	47, 473
Vehicles	O. E. Miles	49, 269
Vehicles, Breeching hooks for	E. Brown	48, 513
Vehicles, Tops of, Attaching and detaching	D. A. King and V. N. Gardner	47, 959
Vehicles, Whiffletrees of, Attaching traces to	E. Brown	50, 682
Velocipedes	W. Quinn	47, 220
Velocipede trotting or pacing horse	H. A. Reynolds	46, 705
Ventilating	H. A. Gouge	47, 633
Ventilating, heating and cooling	D. E. Somes	51, 236
Ventilating apparatus	E. Y. Robbins	48, 722
Ventilating apparatus for railroad cars	J. B. Talmadge	46, 831
Ventilating apparatus for steam vessels	J. G. Woodward	50, 434
Ventilating car windows	G. Mann, Jr.	50, 831
Ventilating pads	J. P. McLean	50, 147
Ventilating railroad cars	T. H. B. Sanders	50, 960
Ventilating windows for railroad cars	R. Monroe, E. Stone, and E. St. John	51, 607
Ventilating and cooling dwellings, churches, hospitals, the- atres, and other buildings	D. E. Somes	46, 596
Ventilating and cooling ships and other vessels	D. E. Somes	46, 593
Ventilator	B. J. Burnett	45, 814
Ventilator	P. Lear	46, 913
Ventilator	H. A. Gouge	47, 413
Ventilator	B. J. Burnett	50, 794
Ventilator, Centrifugal	A. P. Blake	46, 067
Ventilator, Hat	A. Komp	49, 767
Ventilator, Self-regulating	N. Hammond	46, 898
Ventilator, Stove-pipe and draught damper	G. G. Wolfe	46, 414
Ventilator for houses	B. J. Burnett	49, 373
Ventilator for ships	B. J. Burnett	49, 374
Ventilator and damper	J. H. Littlefield	49, 893
V-mach, Destroying, Compound for	J. B. Hyde	50, 006
V-mach	J. P. Curry	48, 795
V-mach, Centreboards for, Windlass for operating	J. C. and H. W. Hamilton	46, 351
V-mach, Decks of, roofs, &c., Applying coverings to	J. Hall	48, 060

Invention or Discovery.	Name of Patentee.	No.
Vessels, Deck and side lights for.....	C. Perley.....	48, 836
Vessels, Navigable, Connection of the gaff of the mast of.....	C. R. Fisher.....	47, 044
Vessels, Oil, Coating for.....	S. Gwynn.....	47, 552
Vessels, Sheathing for.....	H. Fields.....	51, 110
Vessels, Ships, or other, Cooling and ventilating.....	D. E. Somes.....	46, 583
Vessels, Steam, Ejecting refuse matter from.....	J. Palmer.....	50, 153
Vessels, Steam, Ventilating apparatus for.....	J. G. Woodward.....	50, 434
Vessels, Sunken, Cargo of, Discharging the.....	F. E. Falcon.....	49, 026
Vessels, Sunken, Raising.....	T. Bell.....	46, 333
Vessels, Sunken, Raising.....	A. B. Page.....	48, 091
Vessels, Sunken, Raising.....	G. W. Fuller.....	49, 242
Vessels, &c. Sunken, Raising, Self-inflator for.....	T. P. Edson.....	48, 539
Vessel sails, Lazy Jack for.....	D. R. Arnold.....	47, 178
Vessel for boiling.....	W. Kroeger.....	47, 025
Vessel for holding petroleum.....	J. M. Batchelder.....	46, 206
Vessel for holding petroleum.....	J. W. Barnum and P. M. McNoah.....	48, 891
Vessel for preserving butter or other substances.....	J. G. Staunton.....	45, 763
Vessel for the reception and transportation of night-soil.....	R. A. Smith.....	48, 847
Vessels-of-war.....	J. S. Underhill.....	46, 037
Vessels and steamboats, Landing platform for.....	N. W. Wheeler.....	47, 482
Vices.....	A. H. Brainard.....	45, 693
Vices.....	J. Renshaw.....	46, 222
Vice.....	H. B. Dart.....	49, 094
Vise, Horseshoe calking.....	F. B. Curtis.....	49, 268
Vinegar.....	C. Weener.....	50, 506
Vinegar.....	H. Eckert.....	51, 159
Vinegar, Manufacture of.....	M. Rino.....	49, 943
Violins, Lamper for.....	A. F. Braun.....	48, 648
Vulcanite, Alloys of aluminium with, Combination of.....	N. C. Fowler.....	46, 347
Vulcanite or hard rubber.....	D. D. Parmelee.....	48, 992
Vulcanite and other materials, Aluminium with, Combining.....	N. C. Fowler.....	46, 230
W.		
Wadding, Surface sizing, &c., Machine for.....	S. Baxendale.....	46, 065
Wagons.....	J. Dowd.....	48, 281
Wagons, Freight, Hindboards of, Shipping and unshipping.....	F. W. Bishop.....	49, 966
Wagons, Hay, Loading and unloading.....	S. Rogers.....	45, 865
Wagons, Hay-racks for.....	W. M. Thomas.....	49, 455
Wagons, Light.....	H. L. Laham.....	49, 112
Wagons, Spring seat for.....	T. J. Alexander.....	50, 785
Wagons, Tailboards of, Releasing the.....	C. Drcher.....	49, 734
Wagons, unloading attachment for.....	J. H. Stevens.....	49, 006
Wagon boxes, skins of, Casting.....	T. Considine.....	50, 240
Wagon hubs, Boring.....	F. Bremerman.....	51, 668
Wagon shaft shackles.....	F. Dickinson, Jr.....	50, 918
Wagon shoe-lacks.....	A. Hamilton.....	51, 585
Wall builders and stump extractors.....	G. W. Packer, Jr.....	49, 647
Wardrobe bedstead.....	J. Eby.....	47, 197
Warehouse, Wharf and pier.....	J. B. Hyde.....	49, 475
Warming apparatus, Steam.....	C. A. Wilson.....	49, 332
Warming apparatus, Steam.....	C. A. Wilson.....	50, 294
Warps, Dressing and beaming.....	W. Potter and A. W. Sheldon.....	51, 082
Warp-dressing and weaving, Expandable reed for.....	A. J. Nichols.....	46, 281
Washboards.....	N. Homer.....	47, 306
Washboards.....	L. B. Hart.....	48, 811
Washboards.....	J. S. Lash.....	49, 635
Washboards.....	C. H. Warren and A. C. Baldwin.....	51, 634
Washboards, Attachment for.....	C. H. Hudson.....	46, 361
Washers, Cutting, Tool for.....	C. A. King and C. A. Smith.....	50, 600
Washers, street.....	J. McClelland.....	46, 572
Washing, cooling, &c., Apparatus for.....	S. S. Fitch.....	51, 164
Washing apparatus.....	C. C. H. Glidden.....	49, 748
Washing compound.....	E. W. Chappell.....	49, 977
Washing dishes.....	L. A. Alexander.....	51, 000
Washing machine.....	G. W. Sayre.....	45, 940
Washing machine.....	S. Gambell.....	45, 990
Washing machine.....	G. N. Bolles.....	46, 175
Washing machine.....	O. Reeves.....	46, 265
Washing machine.....	E. Burke.....	46, 327
Washing machine.....	L. Marble.....	46, 886
Washing machine.....	W. H. Perry and W. Woodworth.....	46, 935
Washing machine.....	S. S. Putnam.....	47, 038
Washing machine.....	B. Wright.....	47, 062
Washing machine.....	J. H. Duck and E. S. Gould.....	47, 167
Washing machine.....	A. F. Lapham.....	47, 433
Washing machine.....	J. T. Mudge.....	47, 445
Washing machine.....	E. Hodgkins.....	47, 640
Washing machine.....	H. L. Buckwater.....	47, 678
Washing machine.....	E. Culver.....	47, 802
Washing machine.....	H. Brown.....	47, 924
Washing machine.....	D. Davidson.....	47, 934
Washing machine.....	J. Johnson.....	48, 071
Washing machine.....	E. Douglass.....	48, 263

Invention or Discovery.	Name of Patentee.	No.
Washing machine.....	J. Danner.....	48, 375
Washing machine.....	W. R. Hill.....	48, 402
Washing machine.....	J. F. Melcher.....	48, 424
Washing machine.....	M. A. Richardson.....	48, 442
Washing machine.....	LeRoy S. Starrett.....	48, 458
Washing machine.....	E. Gordon.....	48, 550
Washing machine.....	S. P. Mecay.....	48, 576
Washing machine.....	H. E. Smith.....	48, 596
Washing machine.....	J. Heinlein.....	48, 683
Washing machine.....	S. S. Putnam.....	48, 718
Washing machine.....	O. Reeves.....	48, 837
Washing machine.....	V. R. David.....	48, 865
Washing machine.....	I. A. Beals.....	48, 893
Washing machine.....	W. Beaton.....	48, 894
Washing machine.....	J. H. Monsees.....	49, 135
Washing machine.....	J. Champlin.....	49, 229
Washing machine.....	J. E. Atwood.....	49, 360
Washing machine.....	M. Pike.....	49, 436
Washing machine.....	J. Adams.....	49, 490
Washing machine.....	J. B. Winchell.....	49, 672
Washing machine.....	L. E. Ranson.....	49, 920
Washing machine.....	J. Davenport.....	50, 100
Washing machine.....	W. Jackson and F. Robinson.....	50, 131
Washing machine.....	T. J. Price.....	50, 162
Washing machine.....	C. C. Phelps.....	50, 207
Washing machine.....	B. S. Fletcher.....	50, 224
Washing machine.....	A. B. Clark.....	50, 454
Washing machine.....	J. B. Ghormley.....	50, 464
Washing machine.....	C. Parsons and B. S. Dane.....	50, 621
Washing machine.....	H. E. Smith.....	50, 638
Washing machine.....	J. B. Fisher.....	50, 810
Washing machine.....	J. Keane.....	50, 873
Washing machine.....	J. K. Dugdale.....	50, 922

Cutters, Straw	W. Gale and B. B. Belcher	
D.		
Detectors, Time, Watchman's	J. E. Burk	2, 054
Dextrine, Sugar, &c., Manufacture of	T. A. Hoffmann	1, 995
Dies for carriage bolts	W. J. Clark	1, 916
Dies for stamping rings	O. M. Draper	2, 041
Drills, Grain, Seed-covers for	J. S. Gage	2, 011
Drills, Wheat	J. B. Crowell	1, 858
Dye colors, Manufacture of	M. Howe and H. R. Stevens	1, 959
Dye colors, Manufacture of	M. Howe and H. R. Stevens	
E.		
Elevators, Hay	F. F. Fowler	1, 870
Elevators, Hay	F. F. Fowler	1, 865
Engines, Carding	L. O'Brien	1, 942
Engines, Hot	S. Wilcox	1, 877
Engines, Steam	F. P. Dimpfel	2, 060
Engines, Steam	E. D. Barrett and H. P. Bigelow	1, 844
Extracts, Preparing and Leaching tan bark	W. H. Allen and O. Warren	
F.		
Fats and oils, Rendering	C. E. Gray	2, 049
Fibres from waste felted fabrics, Obtaining	The American Water-proof Comp'y.	2, 066
Files, Cutting	M. D. Whipple	1, 952
Fire-arms, Breech-loading	W. C. Hicks	2, 067
Fire-arms, Breech-loading	B. S. Roberts	2, 068
Fire-arms, Breech-loading	B. S. Roberts	1, 965
Fire-arms, Magazine	E. Stabler	1, 928
Fire-arms, Revolving	R. White	1, 936
Fire-arms, Revolving	W. H. Elliot	1, 937
Fire-arms, Revolving	W. H. Elliot	

# INDEX.

XCII

Invention or Discovery.	Name of Patentee.	No.
Fire-arms, Revolving .....	W. H. Elliot .....	1,938
Fire-arms, Self-loading, Magazine in .....	G. W. Hughes .....	1,943
Fireplaces .....	C. A. Littlefield and D. Boyle .....	2,074
Folder, Shirt-bosom .....	J. Stevens .....	2,097
Food, Concentrated, Preparing .....	J. H. Schenck .....	1,945
Food and other substances, Construction of rooms, cases, &c., for preserving and transporting articles of .....	D. E. Somes .....	1,909
Forks, Hay, Elevating .....	T. F. Hiser .....	1,939
Forming and punching articles of irregular forms .....	L. Dodge .....	2,084
Fountains, Soda .....	S. R. Sylvester .....	2,033
Frames, Carpet-bag .....	S. Lagowitz .....	2,035
Frames, Roving .....	G. Chatterton .....	1,950
Fruit, &c., Preserving, Houses for .....	B. M. Nyce .....	2,036
Fruit and other perishable substances, Preserving .....	B. M. Nyce .....	1,960
Fruit and other perishable substances, Preserving .....	B. M. Nyce .....	2,037
Fruit and other perishable substances, Preserving .....	B. M. Nyce .....	2,038
Funnel and measure, Combined .....	S. R. Duamer .....	2,012
Furnaces, Boiler, Steam .....	J. Amory .....	2,058
Furnaces for decomposing and desulphurizing ores .....	R. Spencer .....	2,021
Furnaces for treating ores by superheated steam .....	The Hagen Manufacturing Co. and W. E. Hagen .....	1,988
G.		
Gases and oils, Condensing and separating .....	W. G. W. Jaeger .....	1,902
Gates for water wheels .....	A. L. Stout, W. M. Mills, and J. Temple .....	2,062
Glasses, Looking, or mirrors .....	L. P. Angenard .....	1,883
Gold and silver, Amalgamating and collecting .....	H. W. Adams and S. S. Worthington .....	2,028
Governors, Engines, Steam .....	J. Judson .....	1,889
Governors, Engine, Steam .....	T. Silver .....	2,039
Governors, Engine, Steam .....	R. W. Gardner .....	2,064
Grain binders, Automatic .....	R. D. Brown .....	1,875
Grain separators .....	E. and H. and M. E. Montgomery .....	2,098
Grates for furnaces .....	A. Winterburn .....	2,078
Gums and palate, Artificial .....	J. A. Cummings .....	1,848
Gums and palate, Artificial .....	J. A. Cummings .....	1,904
H.		
Harvesters .....	R. Hoffbeins .....	1,888
Harvesters .....	W. P. Penn .....	1,961
Harvesters .....	E. Jones .....	1,964
Harvesters .....	C. Wheeler, jr .....	1,967
Harvesters .....	C. Wheeler, jr .....	1,968
Harvesters .....	C. Wheeler, jr .....	1,989
Harvesters .....	C. Wheeler, jr .....	1,970
Harvesters .....	C. Wheeler, jr .....	1,971
Harvesters .....	C. Wheeler, jr .....	1,972
Harvesters .....	C. Wheeler, jr .....	1,973
Harvesters .....	C. Wheeler, jr .....	1,974
Harvesters .....	C. Wheeler, jr .....	1,975
Harvesters .....	N. Cogswell and W. H. W. Cushman .....	2,007
Harvesters .....	R. Dutton .....	2,047
Harvesters .....	R. Hoffbeins .....	2,102
Harvester, Clover and grass seed .....	W. N. Whiteley, jr .....	2,009
Harvester, Grain and grass .....	A. Whiteley .....	2,017
Harvester, Raking attachment to .....	R. D. Brown .....	1,876
Harvester, Raking attachment to .....	R. D. Brown .....	1,963
Harvesting machines .....	J. Reilly .....	2,099
Hides and skins, Tanning .....	S. H. Kennedy and H. L. Elder .....	1,849
Hides and skins, Tanning .....	S. H. Kennedy and H. L. Elder .....	1,955
Hoisting machines .....	W. G. Brower .....	1,990
Hoisting machines .....	W. Miller .....	2,003
Hoisting machines .....	W. Miller .....	2,065
Hoisting machines .....	W. Miller .....	2,066
Hook Coat and hat .....	J. T. and H. A. Pratt .....	1,997
Hook, Tackle .....	J. W. Norcross .....	2,042
Horsehoes .....	H. Burden .....	1,998
Houses for preserving fruits, &c. .....	B. M. Nyce .....	2,036
Hulling and scouring machines .....	O. P. Stevens .....	1,923
Hydrants .....	C. L. Stacy .....	1,985
I.		
India-rubber rolls to metallic shafts, Fastening .....	G. J. Colby .....	1,992
Iron, Manufacture of .....	J. D. Williams .....	2,073
Iron, Refining .....	C. Shunk .....	2,118
Iron, Smoothing .....	W. F. Shaw .....	1,859
L.		
Ladder, Step .....	J. H. Balsley .....	2,010
Lamps .....	J. E. Ambrose .....	1,900
Lamps, Locomotive .....	J. Mayhew and T. S. Ray .....	2,128

Invention or Discovery.	Name of Patentee.	No.
Lamps, Locomotive.....	I. A. Williams.....	2, 133
Lantern.....	J. H. Irwin and J. F. Griffin.....	1, 850
Lard and tallow. Rendering.....	C. E. Gray.....	2, 048
Latches, Knob.....	R. L. Webb.....	2, 131
Lathes, Turning.....	N. Harper.....	1, 994
Lathe chucks.....	W. A. Rielly.....	2, 053
Leather, Splitting.....	J. A. Safford.....	2, 123
Leather-splitting machine.....	J. A. Safford.....	1, 956
Leather, Treating.....	E. A. Ashcroft, J. H. Johnson, and A. S. Moore.....	1, 845
Legs, Artificial.....	D. D. Parmelee.....	1, 907
Legs, Artificial.....	D. D. Parmelee.....	1, 908
Light, Artificial, Rendering the same as daylight.....	N. H. Gillet.....	1, 918
Lightning arrester for telegraphs.....	G. A. Stearns.....	2, 043
Locks, Row.....	J. W. Norcross.....	1, 846
Looms.....	M. A. Forbush and G. Comp'ron.....	1, 901
Looms.....	C. Duckworth.....	2, 018
Looms.....	C. Duckworth.....	2, 019
M.		
Maab-tun.....	A. Hammer.....	2, 002
Matter, Composition of, Improved.....	L. Francis and C. H. Loutrell.....	1, 885
Matter, Composition of, Improved.....	L. Francis and C. H. Loutrell.....	1, 886
Matter, Composition of, Improved.....	L. Francis and C. H. Loutrell.....	1, 887
Mattress, Spring.....	S. P. Kittle.....	2, 092
Measure and funnel, Combined.....	S. R. Dummer.....	2, 012
Meat mincer.....	A. W. Hale.....	2, 136
Metal, Sheet, Cleaning.....	E. A. Harvey.....	2, 116
Metal-ware, Sheet, Coating bottoms on.....	L. J. Worden.....	1, 896
Milk, Condensing.....	G. Borden.....	2, 103
Mills, Hominny.....	R. E. Richardson.....	1, 919
Mills, Saw.....	J. K. Knowlton.....	2, 072
Mills, Stamp, and ore crushers, Collecting the dust from.....	J. Brodie.....	2, 090
Mirrors or looking glasses.....	L. P. Angenard.....	1, 883
Mortising machine.....	S. S. Bartlett and T. H. Dodge.....	1, 852
Moulds, Candle.....	W. Humiston.....	2, 108
Mouth-piece for cigars.....	J. Ball.....	2, 113
Mowing machines.....	R. Dutton and R. L. Allen.....	2, 079
Music, Keyed instrument of.....	F. Peabody.....	1, 866
N.		
Naval ram for the destruction of ships.....	C. Perley.....	1, 880
Nuts, Finishing.....	F. P. Pfeighar and W. Shollhorn.....	2, 008
O.		
Offal, Treating.....	J. P. Baugh, E. P. and D. Baugh.....	2, 114
Oils, Hydrocarbon, Distilling.....	W. Archer.....	1, 969
Oils and gases, Condensing and separating.....	W. G. W. Jaeger.....	1, 902
Oils and fats, Rendering.....	C. E. Gray.....	2, 049
Ores, Furnaces for decomposing and desulphurizing.....	R. Spencer.....	2, 021
Ores, Decomposing and desulphurizing.....	R. Spencer.....	2, 022
Ore-crushers and stamp mills, Collecting the dust from.....	J. Brodie.....	2, 090
P.		
Paddle, Feathering.....	Manley Paddle-wheel Company.....	1, 944
Palates and gums, Artificial.....	J. A. Cummings.....	1, 848
Palates and gums, Artificial.....	J. A. Cummings.....	1, 904
Paper pulp.....	J. B. Brown.....	2, 100
Paper and paper boards.....	J. F. Jones.....	1, 896
Pipes, Cement.....	H. Holden.....	1, 953
Pipes, Drain.....	B. S. and M. R. Pierce.....	1, 897
Pipes, Tobacco.....	The Tobacco-Pipe Company.....	1, 929
Pipes, Tobacco.....	A. Fessenden.....	2, 085
Pistons for steam engines.....	H. D. Dunbar.....	2, 029
Planters, Corn.....	G. I. Bergen.....	1, 943
Planters, Corn.....	J. H. and D. R. Alexander.....	2, 135
Press, Baling.....	F. F. Connell, jr.....	2, 101
Press, Baling.....	C. H. Robinson.....	2, 105
Press, Hay and cotton.....	I. James.....	1, 954
Press, Punching.....	N. C. Stiles.....	2, 139
Press, Screw.....	T. B. Webster and T. Gannon.....	2, 111
Provisions, Curing.....	D. E. Somes.....	2, 086
Pumps.....	W. A. Bemis.....	1, 856
Punching and forming articles of irregular form.....	L. Dodge.....	2, 084
Q.		
Quarrying and tunnelling, Machine for.....	A. Maxwell.....	2, 121
Quartz stampers, Shoes and dies for.....	P. W. Gates.....	2, 115

Invention or Discovery	Name of Patentee.	No.
<b>R.</b>		
Railroad ties, Wood, Preserving.....	B. S. Foreman .....	1,951
Rails, Railroad .....	W. D. O'Brien .....	1,891
Rakes, Hay, Horse .....	R. Pratt .....	1,893
Rakes, Hay, Horse .....	R. Pratt .....	1,894
Rakes, Hay, Horse .....	R. Pratt .....	1,895
Rakes, Horse .....	C. Mason, R. W. Fenwick, and D. W. C. Lawrence .....	1,912

Rakes, Horse .....	C. Mason, R. W. Fenwick, and D. W. C. Lawrence .....	1,914
Rakes, Horse .....	C. Mason, R. W. Fenwick, and D. W. C. Lawrence .....	1,915
Rakes, Horse .....	G. Peirce .....	1,921
Rakes, Horse .....	A. B. Sprout .....	1,978
Rakes, Horse .....	A. B. Sprout .....	2,032
Ram, Naval, for the destruction of ships .....	C. Perley .....	1,880
Ranges and stoves, Cooking .....	J. M. Read .....	2,076
Reaping machines .....	C. W. and W. W. Marsh .....	2,014
Reaping machines .....	C. W. and W. W. Marsh .....	2,115
Refracts, Gas and other .....	J. Chilcott .....	2,000
Belts, India-rubber, Fastening to metallic shafts .....	G. J. Colby .....	1,992
Booms, cases, &c., for preserving and transporting articles of food and other substances, Construction of .....	D. E. Somes .....	1,909
Bowlock .....	I. C. and F. W. Flag .....	2,091
<b>S.</b>		
Saws .....	L. Lillie .....	2,112
Sawing machine .....	A. E. and J. V. Warner .....	2,045
Sawing machine .....	F. W. Robinson .....	2,117
Sawing and hulling machine .....	O. P. Stevens .....	1,923
Screw, Heads of, for picture frames .....	J. B. Sargeant .....	2,077
Sewing machine .....	R. G. Fairbanks .....	1,930
Sewing machine .....	E. Townsend .....	1,962
Sewing machine .....	J. Bachelder .....	2,125
Shafts, Metallic, Fastening India-rubber rolls to .....	G. J. Colby .....	1,992
Shoes .....	J. Bryant .....	1,999
Single machine .....	W. P. Valentine .....	2,107
Ships' knee .....	R. Thomas .....	1,966
Shirts, bosom-holder .....	J. Stevens .....	2,097
Sifter, Flour .....	H. Tilden .....	2,106
Silver and gold, Amalgamating and collecting .....	H. W. Adams and S. S. Worthington .....	2,028
Skirts, Hoop .....	S. A. Moody .....	1,872
Skirts, Skeleton .....	S. H. Doughty .....	2,046
Slate surface blacking, Composition for .....	I. N. Pierce .....	2,095
Soda fountain .....	S. R. Sylvester .....	2,033
Spindles, Cutting .....	J. C. Brown .....	2,071
Stamps, Cancelling .....	J. W. Foster .....	1,871
Stone-cutting machines .....	G. J. Wardwell .....	2,087
Stone-cutting machines .....	G. J. Wardwell .....	2,088
Stove, Base burning .....	D. G. Littlefield .....	1,890
Stove, Base burning .....	D. G. Littlefield .....	1,970
Stove, Coal .....	P. P. Stewart .....	2,023
Stoves, Improvement in, by the introduction of superheated steam upon the fuel .....	The Hagun Manufacturing Co. ....	1,887
Stove and range, Cooking .....	J. M. Read .....	2,076
Street washer .....	J. Regester .....	1,984
Street washer .....	J. Regester .....	2,004
Sugar, dextrine, &c., Manufacture of .....	T. A. Hoffman .....	1,995
Springs, Enema .....	H. D. Lockwood .....	1,940
Springs, Enema .....	F. B. Richardson .....	2,005
<b>T.</b>		
Table, Folding .....	J. W. Wayne and J. R. Miller .....	1,855
Tackle block .....	I. E. Palmer .....	1,932
Tackle block, Attachment for .....	G. Focht .....	1,853
Tackle hook .....	J. W. Norcross .....	2,042
Tallow and lard, Rendering .....	C. E. Gray .....	2,048
Tanning hides and skins .....	S. H. Kennedy and H. L. Elder .....	1,849
Tanning hides and skins .....	S. H. Kennedy and H. L. Elder .....	1,955
Tea and coffee pots .....	E. B. Manning .....	2,013
Tea and coffee pots .....	E. B. Manning .....	2,075
Teakettles .....	E. Ripley .....	2,124
Telegraphs, Lightning arrester for .....	G. A. Strarns .....	2,043
Ties, Railroad, Wood, Preserving .....	B. S. Foreman .....	1,951
Time detector, Watchman's .....	J. E. Buck .....	2,054
Tobacco, Cutting .....	F. W. Ritterhoff, C. A. Colquitt, and W. Mulchahey .....	1,903
Tobacco, Ping, Machine for sheeting .....	W. J. Vanhorn and W. Alexander .....	2,044
Trade mark for lead pencils .....	J. Reckendorfer .....	1,933

Invention or Discovery.	Name of Patentee.	No.
Truck for street railway cars.....	R. H. Lockey.....	2, 027
Tunnelling and quarrying, Machine for.....	A. Maxwell.....	2, 129
V.		
Valves for steam engines, Arrangement of.....	J. F. Hamilton.....	1, 864
Valves for steam engines, Operating.....	N. M. Condict and D. S. Steele.....	1, 957
Valves for steam engines, Supplemental.....	R. Colburn and L. H. Hanson.....	1, 862

REPORT  
OF THE  
COMMISSIONER OF PATENTS  
FOR  
THE YEAR 1865.

---

LETTER  
FROM THE  
COMMISSIONER OF PATENTS,  
TRANSMITTING  
HIS ANNUAL REPORT FOR THE YEAR 1865.

---

UNITED STATES PATENT OFFICE,  
*January 31, 1866.*

SIR: I have the honor to transmit herewith the annual report of this office for the year 1865, to be laid before Congress.

I am, very respectfully, your obedient servant,

T. C. THEAKER,  
*Commissioner.*

HON. SCHUYLER COLFAX,  
*Speaker of the House of Representatives.*

---

UNITED STATES PATENT OFFICE,  
*January 31, 1866.*

SIR: In accordance with the provisions of the fourteenth section of the act approved March 3, 1837, I have the honor to submit the following report of the operations of this office during the year 1865.

The receipts and expenditures of this office for the year, and the condition of the patent fund at its close, will be seen by a glance at the following statements:

No. 1.

Number of applications for patents during the year.....	10,664
Number of patents issued, including reissues and designs.....	6,616
Number of caveats filed .....	1,937
Number of applications for extensions of patents.....	78
Number of patents extended .....	61
Number of patents expired, December 31, 1865.....	914

Of the patents granted, there were to—

Citizens of the United States.....	6, 428
Subjects of Great Britain.....	82
Subjects of French empire.....	40
Subjects of other foreign governments.....	66

---

No. 2.

*Statement of money received during the year, namely :*

On applications for patents, reissues, &c .....	\$321, 572 20
For copies and recording .....	27, 219 64
<b>Total .....</b>	<b>348, 791 84</b>

---

No. 3.

*Statement of expenditures from the patent fund.*

For salaries.....	\$100, 032 54
For contingent expenses .....	75, 244 43
For temporary clerks .....	97, 453 37
For withdrawals .....	420 00
For refunding money paid by mistake .....	649 00
For judges in appeal cases.....	400 00
<b>Total expended.....</b>	<b>274, 199 34</b>

---

No. 4.

*Statement of the patent fund.*

Amount to the credit of the patent fund, January 1, 1865.....	\$55, 592 28
Amount of receipts during the year .....	348, 791 84
<b>Total .....</b>	<b>404, 384 12</b>
From which deduct the amount of expenditures .....	274, 199 34
Leaving to the credit of the patent fund, January 1, 1866, the sum of .....	130, 184 78
Surplus of receipts over expenditures.....	74, 592 50

The unprecedented activity of the mechanical industry of the country since the close of the war of the rebellion is strikingly manifested by a comparison of the business of this office for the last year with that of the previous years since the organization of the office.

*Table exhibiting the business of the office for twenty-nine years ending December 31, 1865.*

Years.	Applications filed.	Caveats filed.	Patents issued.	Cash received.	Cash-expended.
1837			435	\$29,289 08	\$33,506 98
1838			520	42,123 54	37,402 10
1839			425	37,260 00	34,543 51
1840	765	228	473	38,056 51	39,020 67
1841	847	312	495	40,413 01	52,666 87
1842	761	391	517	36,505 68	31,241 48
1843	819	315	531	35,315 81	30,766 96
1844	1,045	380	502	42,509 26	36,244 73
1845	1,246	452	502	51,076 14	39,395 65
1846	1,272	448	619	50,264 16	46,158 71
1847	1,531	553	572	63,111 19	41,878 35
1848	1,628	607	660	67,576 69	58,905 84
1849	1,955	595	1,070	80,752 78	77,716 44
1850	2,193	602	995	86,927 05	80,100 95
1851	2,258	760	869	95,738 61	86,916 93
1852	2,639	996	1,020	112,056 34	95,916 91
1853	2,673	901	958	121,527 45	132,869 83
1854	3,324	868	1,902	163,789 84	167,146 32
1855	4,435	906	2,024	216,459 35	179,540 33
1856	4,960	1,024	2,502	192,588 02	199,931 02
1857	4,771	1,010	2,910	196,132 01	211,582 09
1858	5,364	943	3,710	203,716 16	193,833 74
1859	6,225	1,097	4,538	245,942 15	210,278 41
1860	7,653	1,084	4,819	256,352 59	252,820 80
1861	4,643	700	3,340	137,354 44	221,491 91
1862	5,038	824	3,521	215,754 99	182,810 39
1863	6,014	787	4,170	195,593 29	189,414 14
1864	6,972	1,063	5,020	240,919 98	229,868 00
1865	10,664	1,937	6,616	348,791 84	274,199 34

It is here seen that the number of applications for patents received in 1865, exceeded by nearly forty per cent. the number filed in any previous year, and the number of caveats filed exceeded those of any previous year by more than seventy-five per cent. The number of patents issued exceeded those issued in 1864, the highest previous year, by more than thirty per cent.

The receipts into the patent fund exceed those of any former year by more than thirty-six per cent., while the expenditures were only increased a trifle over eight per cent., and a considerable surplus is left to the credit of the patent fund.

If the cases brought to the attention of the office continue to be as numerous as at present, it will become necessary to make such additions to the examining and clerical force of the office as will absorb a portion of the surplus earnings; while, on the other hand, if the anticipated resumption of specie payments should be attended with any general financial prostration, the receipts of the office would undoubtedly fall below the rate of the present expenses.

When the Patent Office was first established as a separate bureau, in 1836, the act provided for the appointment of a single examining clerk. The number has been increased by additional legislation at successive periods, until, by the act of March 2, 1861, the limit was fixed at sixteen examiners and the same number each of first and second assistant examiners.

As will be seen by a reference to the comparative table given above, there was a material reduction in the business of the office immediately after the passage of the act just referred to, and it was found unnecessary, until recently, to appoint the full number of examiners allowed by law. But so rapid has been the increase of inventive activity, that it is now found impossible to prevent the examinations falling largely in arrears.

The number of applications in the hands of the examiners at the close of the year, on which no action had been taken, was 1,134.

I would therefore recommend that authority be given for the appointment of four additional officers of each of the several grades, if their services shall be found necessary to the examination of the applications presented.

By the act of May 27, 1848, the salary of the examiners was fixed at twenty-five hundred dollars per annum; and by the act of March 3, 1855, that of the first assistant and second assistant examiners was fixed at eighteen hundred dollars and sixteen hundred dollars per annum, respectively. The position of first assistant examiner is one of great importance and responsibility, as he is frequently called upon to decide upon the merits of applications in the absence of his principal, and it is also of almost daily occurrence that the pressure of work will be such as to force the examiner to rely mainly upon the judgment of his assistant. I am satisfied that the interests of the office and of inventors generally would be promoted if the salary of the first assistant examiners were raised to two thousand dollars.

I would also most respectfully urge that the salary of the librarian be raised to twenty-five hundred dollars per annum, the sum now paid the examiners. The library now contains upwards of 15,000 volumes, exclusive of some 1,500 volumes temporarily in the rooms of the Agricultural Department. Although the number of volumes is not so large as may be found in many other public libraries, the works are almost exclusively of a scientific and technological character, and it is doubtful if there is another library in the country which is so nearly complete in all the departments of practical knowledge. During the past year rather more than 1,000 new volumes have been placed upon the shelves, while the expenditures, exclusive of the sums paid for the binding and transportation of the specifications and drawings of English patents so liberally presented to the office by the Great Seal Patent Office of England, have been less than \$500.

The library is constantly visited by inventors from all parts of the country, as well as by persons engaged in the various branches of scientific investigation, and it is requisite that the librarian shall be a man of broad culture and familiar with the contents of all the works under his care. As these cover the whole domain of practical science, it is manifest that the salary of the librarian should be at least equal to that of a principal examiner.

In addition to the examining corps, the administrative and financial business of the office requires a considerable force of clerks, who are distributed into several divisions, such as experience has shown to be most conducive to the rapid performance of the work.

I think there can be no doubt of the propriety of having each of these divisions under the charge of a clerk of the highest regular grade; and I would therefore recommend that authority be given for the appointment of six clerks of the fourth class.

The disbursing clerk is now ranked as a clerk of the fourth class. All moneys received or expended by the office pass through his hands, and he is held responsible for the accuracy of his accounts.

I can see no reason why his salary should be less than that generally paid to the disbursing clerks in the several executive departments, and I would recommend that his salary be fixed at two thousand dollars per annum.

The act of March 2, 1861, provided for the appointment of a board of examiners-in-chief, whose duty it should be to revise and determine upon the validity of decisions made by examiners when adverse to the grant of letters patent. An experience of five years has fully confirmed the wisdom of the enactment, but it has at the same time demonstrated the necessity of additional legislation upon the subject. While a fee of twenty dollars is charged upon an appeal from the examiners-in-chief to the Commissioner, no charge is made for an appeal

from the examiners to the board. It results from this that appeals are taken in many cases without a shadow of ground, and, in contested cases, merely for the purpose of delay. During the year 1865 there were 495 appeals taken to the board, of which number 166 remained undisposed of at the close of the year. If a fee of ten dollars were charged on appeals to the board it would check the number of frivolous appeals, and would be gladly paid by those inventors who are confident of the justice of their claim, as they would recognize it as securing them an early decision in place of the delay of months to which they are now so generally subjected.

After consultation with many inventors, and with solicitors in extensive practice, I am satisfied that the proposed amendment would be received with almost universal favor.

The published reports of this office, with the descriptions and illustrations of patented inventions, are not only of great value to inventors and the country, as indicative of the directions in which mechanical and scientific skill is pushing its way into new channels, but their general diffusion effects a very important reduction in the labor to be performed in this office. By a study of the report, one who has perfected an improvement in some useful machine is in many instances enabled to see at once whether his invention is novel, and if so, the particular feature which has never been the subject of a patent. Again, when an existing patent is referred to by the office as a reason for the rejection of an application, the applicant is saved the time and expense required to obtain a copy of such patent by its publication in the annual report. This is especially true of the latest reports, inasmuch as, when a necessity is felt by the public for an improvement in some particular art or manufacture, the ingenuity of inventors in different parts of the country is stimulated into activity in that particular field, while at another period the excess of activity is turned into other paths.

For these reasons the labor of the office is much increased by the delay which has recently attended the publication of the annual reports; and the value of the reports to the public is much diminished by the late day at which they make their appearance. The heavy pressure upon the Public Printing Office, occasioned by the increased business of all the executive departments growing out of the war which has now been so happily terminated, has been one cause of the delay; and if this were all, it would not be expected that this office should complain. But the most serious obstruction to an early issue is found in the state of the law, or rather, I might say, in the absence of any law upon the subject. Although it has long been the settled practice of the government to publish the list of patents with the illustrations, there is no law authorizing such publication except as the printing of each report is ordered after the same is submitted to Congress. Some time must then elapse before a contract can be made with the engravers, and it is usually April or May before the engraving can be commenced upon the patents of the previous year. It is worthy of consideration whether authority might not be given in advance for the preparation of the plates, so that the drawings could be placed in the hands of the engraver as soon as the patents are issued, and the whole work be prepared for the printer immediately after the close of the year. The number of copies to be printed might be determined by order of either house of Congress, after the report is submitted, in the same manner as now. If this course be adopted, the public will be placed in possession of the information nearly, if not quite, a year earlier than they can under the present system, and the charge upon the treasury will be in no measure increased.

Concurrent with the establishment of this office was the adoption of the policy of disposing of the models illustrative of inventions in such manner as should be conducive to a beneficial and favorable display thereof, the rooms in which they were arranged to be kept open during suitable hours for public inspection. The act also contemplated the exhibition of specimens of unpatented manufac-

tures and works of art. The thirty years which have succeeded have seen the germ thus planted expand into magnificent proportions, until the saloons on the upper floor of the Patent Office are now among the chief public attractions of the seat of government, and thronged daily by visitors from all parts of the country as well as from beyond the ocean.

Here may be seen at a single glance, as it were, the progressive steps in the invention and perfection of the wonderful labor-saving machines of the past quarter of a century, from the first blind gropings of mechanical genius up to the splendid and successful productions of the present day. The models are not only of great assistance in the examination of applications, but it is my conviction, which I am happy to know is shared by many of those most conversant with the subject, that from ideas gathered in a visit to these halls have sprung many inventions of great value to the community. It is in view of this last suggestion that the wisdom of the framers of the act stands out in the boldest relief, since the benefits which are to flow in the future from this source are almost incalculable. If this policy is to be continued, which I hardly allow myself to doubt, the attention of Congress must be turned, at an early day, to the consideration of the manner in which enlarged accommodations for this office can be provided. Of three hundred and ten cases for the reception of models, but twelve are now unoccupied, while one is barely sufficient for a single week's issue of patents. By removing the rejected models, which now fill eighty-six cases, and by crowding the whole to their utmost capacity, it will probably be possible to exhibit the patented models of the next three or four years, although with much inconvenience. At the same time, it should be stated the models accompanying rejected applications are often of a high value for purposes of illustration and suggestion.

The rooms in which the business of the Patent Office is now transacted are even more inadequate for the purpose than are the galleries above. Under the administration of my immediate predecessor it became necessary to use for other purposes some of the rooms before occupied by copying clerks, and the work of copying was given out to be done by copyists at their private residences. Although the practice involves the sending the files and records of the office through the streets and into various parts of the city, I have thus far found myself unable to make any change from the utter impossibility of providing desk room within the building for the fifty-six copyists now employed; and the work of this division is constantly increasing. The large increase in the number of patents requires a corresponding increase in the force employed in engrossing and recording, and the orders upon the office for copies of records and for recording assignments have more than doubled in the last four years.

In 1862 the receipts into the patent fund for copies and recording assignments were.....	\$11,081 50
In 1863 .....	16,976 29
In 1864 .....	20,055 22
In 1865 .....	27,219 64

A considerable loss of time inevitably results from the interruptions attendant upon placing two examiners, with their respective assistants, in the same room, as it is not infrequently the case that inventors, or their counsel, desire to appear in person and deliver oral arguments before the examiner. In many interference cases there are three or more contesting applicants, and while a cause of this character is being tried on one side of a small room, it is manifest that no business can be transacted upon the other side which requires any close attention or consecutive thought. Notwithstanding this objection, six of the examiners are obliged to accommodate themselves to such arrangement, as there are but thirteen rooms which can be assigned to this branch of the business of the office.

It is worthy of note that the classes in which the work has fallen most behind

are in this situation. If additional examiners shall be appointed, as I have recommended above, the evil will be but intensified, unless rooms can be assigned to them which are now occupied by other bureaus. The library is also crowded into a space too narrow to allow the proper arrangement of the shelves, and it is impossible to devote any convenient space for the use of those not connected with the office who desire to consult the books. In fine, while the occupation of some rooms in addition to those now at my disposal is a matter of immediate and pressing necessity, it is evident that many years cannot pass by before the whole of the present building will be needed, unless some radical change shall be made in the organization and business of the office.

The most feasible plan for attaining the relief which is now so urgent is undoubtedly that of providing rooms in some other building for the use of the Agricultural Department. Of the value of the services which that department has rendered to the country since its organization I cannot speak in too high terms, and with the immense territory which is just opening, for the first time, for the application of *intelligent farming*, the labors of the department will be proportionately increased as the bounteous stream of knowledge which it diffuses spreads over a wider and wider field. If a change of location could, in any way, impair its usefulness, its removal would be a serious matter; but I am informed that, in the opinion of the head of that department, such would not be the result. Already a portion of the clerks are placed in other rooms, and only by an entire abandonment of the Patent Office can the whole department be brought together. If it came properly within the scope of this report, I might consider the propriety of erecting a suitable building for the use of the Agricultural Department; but leaving that subject to the Commissioner of Agriculture, with whom it appropriately belongs, I must reiterate that the absolute necessities of this office demand additional rooms, which can be obtained immediately in no other way than by the removal of that department.

The law in relation to the issue of patents, as well as the practice of the office, in its general features, has been so nearly uniform for a long term of years that any violent innovation is objectionable; but there are some few matters of detail in which, in my judgment, the interests of both inventors and the public would be promoted by a change.

The twelfth section of the act of March 2, 1861, provides that all applications for patents shall be completed for examination within two years from the filing the petition, and in default thereof shall be regarded as abandoned.

Under the construction given to this statute by my predecessor, it has been the practice of the office to regard applications as abandoned when they have lain two years after a rejection without any action on the part of the inventor to procure a reconsideration. The correctness of this interpretation of the law has recently been questioned, and it must be admitted that a strict adherence to the letter would hardly sustain the rule. There is clearly no reason why an application should be regarded as abandoned in the one case which will not weigh with even stronger force in the other. If the practice spoken of be not adhered to, it becomes impossible to determine when a rejected application can be referred to on the examination of a subsequent one, or when the model and drawing may be submitted to public inspection, as neither is proper while the application is considered as pending. There can be no hardship in requiring one who makes claim to an invention, and who has had one or more examinations by the office, and then allows the case to rest for two years or more without action of any kind, to present a reasonable excuse for his delay if he desires to call the matter up anew. I would therefore recommend such an enactment as will leave no doubt of the legality of the course hitherto pursued.

This period of *two years* is recognized in several instances as the measure by which the rights of an inventor shall be determined; and I am convinced that if the same idea is extended to another case not now within its scope, the occa-

sion for much serious injustice will be removed. Under the existing law a patent is taken out in which the inventor makes a clearly defined claim to a particular feature. The claim, it may be, does not cover all that is described in the specification or shown in the drawing, and whatever is thus left unclaimed may be used by any person, unless protected by a previous patent. Some enterprising manufacturer, who is keen enough to recognize the value of that which the inventor did not deem it worth his while to appropriate, invests his capital and begins to furnish the public with a valuable article; and after this the inventor applies for a reissue of his patent and an extension of his claim so as to give him the monopoly of that which he had before left open to the use of the world. If it appears, upon examination, that the original specification described the art or device in question, and that the holder of the patent was actually the original inventor, he is entitled to a reissue in such terms as to preclude the use of such device, except upon such conditions as he may grant. It would not be difficult in this manner to entrap a person into such an arrangement of his business or employment of his means as to leave him at the mercy of the inventor, or to compel him to pay an exorbitant royalty, when the patent is reissued with a broader claim. In my opinion it would be a judicious amendment of the law, and would prove an effective safeguard to the rights of innocent parties, if the privilege of reissuing a patent in such terms as to broaden the claim were restricted to the first two years of the life of a patent, leaving reissues for other purposes to be granted at any time, as at present.

The act of 1861 allowed applicants to pay a portion of the fee required for the issue of a patent at the time of making application, and the remainder at the convenience of the inventor, whenever he might desire the patent to be engrossed. As it was found that many patents were allowed to lie indefinitely, it was further provided, in 1863, that if the final fee were not paid within six months after the patent was passed and allowed, the invention should become public property as against the applicant. In 1865, it was further enacted that any person who fails to pay the final fee within the time limited may make a new application for the same invention at any time within two years from the date of the allowance of the original application. Under this state of the law, cases have been brought to the attention of the Office, in which inventors have been unable to pay the fee within six months, or to file a new application within two years from the date of the allowance of their application, by reason of absence from home in the service of the United States. To confiscate the property of an inventor because he has imperilled his life for the sake of his country is so glaringly unjust that it needs but to be mentioned to secure the adoption of a remedy. I would suggest that, whenever it be made to appear to the satisfaction of this Office that a failure to pay this final fee, or to renew an application within the time limited by law, has been due to the absence of the inventor from home on duty in the army or navy of the United States, the forfeiture shall be set aside and the patent issued.

The sixth section of the act of March 3, 1839, provided that, in all cases where an invention had been patented in a foreign country prior to the issue of a patent here, such patent should be limited to the term of fourteen years from the date or publication of such foreign letters patent.

On the second of March, 1861, it was enacted that all patents thereafter granted should remain in force for the term of seventeen years from the date of issue. This was construed by my predecessor as merely extending the term, but as in no wise affecting the limitation above quoted from the act of 1839. The Office, therefore, continued to antedate all such patents in the same manner as before the passage of the act of 1861; and, as my attention was not called to the point on my assuming the direction of the Office, the same practice has been followed until quite a recent period. My attention having been called, within a short time, to the subject, it has been held, after consultation with the Secretary of

the Interior, that the rule of the Office, for the past five years, was clearly without any authority of law, the act of 1861 plainly operating the repeal of so much of the act of 1839 as shortens the term of the patent. Although the language of the statute is so explicit as to necessitate this construction, I have reason to believe that such was not the intention of the framers of the act, but that they merely intended to extend the term from fourteen to seventeen years, as an equivalent for the withdrawal of the privilege of extension. The belief that such was the intention of the act was so general among inventors and patent lawyers that the former ruling of the Office was almost universally accepted for nearly five years. Under this state of facts it is manifestly proper that those patents which were issued for a shortened term under the former practice of the Office should be continued in force for the full term of seventeen years from the date of their issue, if the law in relation to the subject is to stand as at present. As, however, some legislation is necessary, I would invite attention to the following considerations :

While an application for a patent is pending, the specification, model, and drawing are held strictly confidential, no knowledge of them being allowed to go beyond the office without the express consent of the inventor or his duly authorized attorney. Any other course would be full of peril to the honest inventor, as unscrupulous men could readily adopt whatever was valuable in the invention, and there would be no redress. Secrecy is the only protection available before the issue of the patent. But, in cases of an invention which has been patented abroad, the full description is already open to the public, so that nothing is gained by treating the application as confidential, while there are reasons of great force for applying exactly the contrary rule to these cases. If any manufacturer or artisan meets with the published description of an invention which, upon inquiry, he learns has not been patented in this country, it is surely legitimate for him to adopt it; and this fact is recognized by the existing statute in denying a patent for an invention patented abroad if the same has been introduced into use in this country. But this provision has been hitherto almost a nullity in practice, since it is rarely possible for the Office to obtain trustworthy information as to the question of fact. No one but the applicant, or others in his interest, is cognizant of the pendency of the application, nor would the knowledge be likely to reach the persons most interested if the veil of secrecy were withdrawn. When an application is made for the extension of the term of a patent, the law requires that notice of the fact shall be given to the public by advertisement in a newspaper in the city of Washington, and in another published in that part of the country most interested adversely to the grant of the petition. I can see no reason why the same rule should not be followed in the case of inventions already patented abroad, and I would, therefore, recommend an enactment to that effect. As the cost of advertising is about twenty-five dollars for each case, it would be necessary to increase the fee payable on such applications by that amount; but the inventor would be fully compensated for this by the full term for which his patent would run. The much greater probability of the fact of the invention having been introduced into use being made known to the office would deter inventors from the risk of the delay which now so frequently intervenes between the issue of the foreign patent and the applications here. In fact, I am strongly inclined to the opinion that such a change in the law would result in the much earlier introduction of foreign inventions to the American public than has heretofore prevailed.

When applications are made for the extension of patents, as the law now stands, the Commissioner alone decides the case, and from his decision there is no appeal. In my opinion this lodges with him too much power. In the class of cases referred to there is often a very heavy interest at stake, frequently amounting to hundreds of thousands of dollars, and the adverse parties are the patentee, or his heirs, on the one side, and the public on the other. The act of

1836 vested this power in a board consisting of the Secretary of State, the Commissioner of Patents, and the Solicitor of the Treasury; but with the increase of business, and the consequent frequency of applications of this character, it became difficult, if not impracticable, to assemble the board, so that, in 1848, a change was made, and the law was fixed as now. Since the establishment of the Board of Examiners-in-Chief the evil which led to the passage of the act of 1848 no longer exists, and it appears to me eminently proper that extension cases should be referred to this board for decision. And the public interest would be rendered more certainly secure if the concurrence of the Commissioner with the action of the board be required before a patent can be extended. The plan suggested possesses the advantage that the matters involved would be considered by four minds instead of one, and there would be much less danger of an extension being procured by corrupt means than where one alone decides the case, and that, too, without appeal. I suppose it to be prudent to so legislate as to guard as far as possible against fraud and corruption by making it dangerous to attempt and difficult to accomplish, rather than to seem to invite it by making it either easy or safe; and as courts for deciding important causes are seldom so constituted as to consist of but one member, why should the custom be departed from in this instance where heavy interests are depending?

With over eleven hundred applications untouched by the examiners at the commencement of the present month, and new cases coming in more rapidly than the old ones can be disposed of, I have felt unwilling to require those employed on the several classes of invention to devote the time necessary for the preparation of any elaborate review of the progress in the arts, which is evidenced by the records of the Office for the past year.

The following brief sketches will be found, however, to be well worthy the attention of all who are interested in the development of the industry and resources of our country and of mankind.

#### CLASS A.—AGRICULTURE.

##### *Division 1.—Implements for working the soil, &c. Division 3.—Implements for preparing produce for market.*

There is perhaps no agricultural implement of greater importance than the plough, and in some form this has been used by men through a greater number of centuries than any other implement. Its history is an interesting one, and its efficiency may be taken as an index to the state of civilization in all countries where it is used. Consisting at first of the rude branch of a tree, it has from time to time been improved until it is difficult to conceive in what way it can be made more efficient. In no country has there been greater improvement in this implement of husbandry than in the United States of America, and it is a significant fact that these improvements have been made chiefly by men in the northern States.

The efficiency and proper use of the plough lie at the very foundation of all our national prosperity. The demand for its use is first in peace, and indispensable in war. Its use furnishes bread to the million, and commerce to the world. At no time has its efficiency been more marked than during the past few years. Notwithstanding nearly a million of men were taken from industrial pursuits in the loyal States during the first two years of the war, the third year found a larger breadth of grain upon the ground than the year preceding the rebellion. This ability to supply the deficiency of manual labor is due chiefly to improved instruments for cultivating the soil. From the earliest history of our country two things have stimulated improvements in machinery of various kinds: First, necessity; and second, the protection offered to inventors by our patent law. Since the establishment of the Patent Office there have issued not less than five

hundred and sixty-five patents for improvements in ploughs alone, and the number of patents on cultivators (which implement in fact is but a modification of the plough) will not fall much short of this number. The single plough has been the longest in use, and has undergone the greatest number of modifications. Various materials have been used in its construction. Fifty years ago it was mostly made of wood and iron, the share being tipped with steel; cast-iron has since been most extensively used. In some parts of the country, especially the prairies of the west, the soil is found to possess a particular property of "packing" upon the mouldboard, which adds greatly to the force required to turn the furrow. Cast-steel has been used, with partial success, to obviate this difficulty, but it has been found that its liability to rust presents the same objection found in the use of cast-iron. Within the last year efforts have been made to use glass and other vitreous substances in the construction of mouldboards, and it is said that reasonable success has thus far attended the effort. In those experiments that have been made with glass mouldboards, it is found that the friction upon the soil is very much reduced, requiring from one-quarter to one-third less power to perform a given amount of work than a cast-iron mouldboard.

Considerable attention has also been paid within the last year to the construction of what are termed "gang ploughs." In very heavy ploughing they are not likely to go into use, but in second or fallow-ground ploughing they may become very efficient and labor-saving.

Much has also been done to improve cultivators. These, it will be seen, have been brought to a good degree of perfection, so much so that in the cultivation of corn (maize) and other similar crops but little use for the hand hoe remains. From ten to twelve acres forms an ordinary day's work for a man and horse.

In seeding machines the attention of inventors has been directed to a greater proficiency and exactness in their operation; and it is gratifying to know that these efforts have been crowned with success.

Since the return of Union soldiers from the cotton States there has been considerable attention paid by many of them to the improvements of machinery for planting the staple of that section of the country, and from the present indications the heavy and unwieldy "slave hoe" will soon pass into oblivion, as has the system which gave it use. The planting and cultivation of the cotton crop differs in some degree from that of maize, and hence requires a modification of the implements for that purpose.

Several important and, it is believed, valuable patents have issued within the past year, intended to aid directly in the cultivation of the cotton crop, which, no doubt, if introduced will save at least nine-tenths of the labor previously required, thus supplying by the use of machinery the loss of labor that has been feared in consequence of the abolition of slavery. In truth, the labor thus set free will become employed in other channels of industry, while a larger breadth of land will be cultivated in a better manner and with greater profit. During the past year a number of valuable patents have been granted for machines for threshing and preparing grain for market; and it would seem probable that invention in this direction has nearly reached the culminating point.

With the most recent improvements in grain separators, it is found to be practicable to separate the grain and deliver the straw in good condition for binding—quite a desideratum, when straight straw in bundles bears nearly the price of hay. The degree of perfection which has been attained in the cleaning and separation of various kinds of grain from each other is truly astonishing, and it would now seem almost impossible to make up a mixture of the various kinds of grain and tares that could not by one operation become completely separated, delivering each kind and parcel by itself.

The degree of perfection to which all inventions are now tending has not and

will not be gained by a single mighty stride in any particular branch, but is and will be the result of what may be termed small improvements, one inventor adding a little here, and another a little there, and thus little by little the invention grows as it were to the stature of manhood, and becomes useful in the great theatre of life. While the improvements hereinbefore enumerated are, perhaps, among the most important to the farmer, it is proper to state in this connection that the minor implements have not been neglected by inventors. A great variety of improvements is being introduced in various farming implements and tools, tending as a whole to the reduction and ease of manual labor, as well as a more perfect result and a richer reward.

#### CLASS A.—AGRICULTURE.

##### *Division 2.—Machines and implements for harvesting grains, grasses, &c.*

Invention in reaping and mowing machines during the year has been confined principally to improvements in details of construction and arrangement, these details embracing almost every part or feature of the several machines in common use. Among those as having received especial attention may be mentioned the manner of connecting the hinged folding cutting apparatus with the main frame, the object being to make the connection strong, simple, and reliable, such as to allow the cutting apparatus to conform freely to inequalities in the surface of the ground, and also in some cases to rock or roll in the direction of the path of the machine; for varying the angle of presentation of the cutters to the ground, so as to adapt them to the nature of the work to be accomplished. Considerable attention has been given to the manner of combining and the means for operating in what is termed the "combined reel and rake," operating in connection with the hinged cutting apparatus, whereby the motions of the latter in conforming to the uneven surface of the ground were imparted to the rake and reel, keeping them always in the same relation to the cutting apparatus and platform, and enabling them to work equally well in any position. Various improvements have also been made in the manner of operating the "dropping platform and cut-off," devices designed to displace the various rake attachments, which require, ordinarily, much power to operate them, the cut-off serving to arrest the fall of the cut grain upon the platform, while the latter is tilted or has its rear edge dropped upon the ground, so as to slide the grain accumulated thereon off upon the ground in the path of the machine, in convenient shape and quantity for binding. One result of these numerous improvements has been to render the machines imple in construction, and in machines to be operated by a single horse, and even of hand machines for lawn mowing, and, consequently, several patents have been granted during the year upon machines of this latter class.

Horse rakes have received their share of attention, though invention in this branch of the division, also, has been confined to improvements of devices already in use. The tooth of the rake has been improved in form, &c., so as to adapt it to use upon the most uneven ground; also, the means for attaching the teeth to the head, and the device for operating the rake, both automatically and by the attendant, so as to secure at the same time simplicity and efficiency. The same in substance may be said of the various other machines used in securing the crop of hay and grain, such as hay spreaders, horse hay-forks, rakers, loaders, &c. Improvements therein have been confined to perfecting details, so as to make these machines simple and cheap, efficient in the performance of much of the severe labor of the harvest heretofore done by hand, and within the reach of the farmer of moderate means.

## CLASS A.—AGRICULTURE.

*Division 4.—Mills for grinding.*

In the class of mills for grinding and dressing grain, including the bolting and packing of flour, no very marked or distinctly radical invention has been made during the year, the applications relating to the details and improvements of old ideas and devices rather than to the leading principles embraced in this division of inventions.

In the other branch of this class, embracing the breaking and grinding of quartz, inventors show energy and inventive talent which leads off in four distinct directions—one in improving, perhaps the most ancient of methods for reducing the quartz by stamping; another by revolving heavy grinding wheels in a trough, the wheels passing over the quartz; while another reduces the quartz, first by crushing between reciprocating jaws and afterwards passing the broken pieces between rollers and grinding surfaces to complete the reduction; while still another places the broken quartz into a strong receptacle, having revolving arms with breakers or hammers upon them, which in their rapid revolution strike the quartz and break it by the force of the blow, or by projecting it against some other part of the machine arranged for the purpose. The operation is kept up until the quartz is reduced to powder.

## CLASS B.—CALORIFICS AND PHOTICS.

*Division 1.—Apparatus for warming, ventilation, cooking, &c.*

The increase of inventions in this division is clearly indicated by the following figures: In 1863 the number of cases presented for examination was 305; in 1864 it was 389; and in 1865 it was 562; and the number of cases passed for issue was 292. This increase in the number of applications does not appear to have been disproportionately great in any particular class of cases, but if in any, those pertaining to the adaptation and use of hydro-carbons for fuel.

There have been twenty-nine cases of the former and twenty-two of the latter. A good number of ingenious devices promising much in economy, and attractive on account of size and portability, have been patented; but no remarkably novel feature was presented in any. Old ideas developed in former cases, in our own or in foreign patents, have been generally adhered to, and but little change is found in the invention than some specialty in the construction or arrangement of the different parts of the apparatus. But none have shown any high degree of inventive skill, though marketable, useful, and very attractive devices have been produced.

It seems well nigh certain that there is a broad field of invention to be opened by finding how hydro-carbons may be best used as fuel. They possess in themselves, so admirably condensed, the chief elements of combustion, that we must confidently expect at no distant day to find them in practical, economical, and common use in steamships, locomotives, workshops, for cooking, and other purposes requiring the application of heat. Already we see tokens that inquiring minds are beginning the busy search for means to bring about such a result.

Several furnaces for steam boilers, the inventions of our own citizens or foreigners, have been patented. The improvements here have been generally of an important character.

The construction of grate bars has received much attention; many new and apparently useful devices, where strength, durability, and lightness are well combined, have met with favorable consideration.

Inventors and manufacturers also have been very industrious in producing new combinations in cooking and heating stoves and in furnaces, but so much had been done in this domain in former years that little more remained to be

accomplished, than to produce some slight improvements in the adjustment of the several parts.

The large number of applications for patents for grain dryers seems to be a correct index of the demand for economy in time and labor which commerce now makes, in order to prepare the cereal crops of the west for their markets, and serves to show how great the endeavor is to substitute for the labor of men's hands the cheaper and more powerful agents of mechanical combinations.

The ventilation of mines, ships, houses, cars, churches, &c., has been earnestly discussed in many applications; well known and most competent men, possessing large information about the history and science of this subject, and capable of adding experience to education, have produced several meritorious inventions. The new styles in building houses, ships, &c., and the new devices for generating heat for warming apartments and other kindred causes are constantly calling for modifications of old schemes of ventilation, or for new expedients to preserve a reasonable supply of vital air in the rooms where we dwell or pursue our daily avocations. Efforts in this direction appear to be all the more worthy of notice, and more commendable, as the devices or apparatus are not generally of such a character as to win large present praise or pecuniary compensation for the toil and thought bestowed upon them.

#### CLASS B.—CALORIFICS AND PHOTICS.

##### *Division 2.—Lamps, lanterns, gas-burners, &c.*

The last four years have wrought a great revolution in the whole economy of artificial light. In all families beyond the reach of gas-light, candles have almost disappeared, and lamps, producing a light nearly as desirable as gas, have taken their place. This has resulted mainly from the immense development within that time of petroleum, which has in a few years sprung up into a national interest, as the following facts will show:

There were exported in 1862, 10,887,701 gallons; in 1863, 28,250,721 gallons; in 1864, 31,755,687 gallons.

Of crude oil there were refined, in 1864, 22,553,268 gallons; in 1865, 30,472,127 gallons.

Estimating the quantity consumed at home as only equal to that exported, the whole amount produced is, in 1862, 21,775,402 gallons; in 1863, 56,501,442 gallons; in 1864, 63,511,364 gallons; in 1865, 86,673,462 gallons.

This great new source of artificial light having been obtained, it remained for the inventive genius of the country to construct lamps fitted for its consumption. The result has been that nine hundred and eighty-six applications have within that period been filed in this class, being more than four times the number in the same class during any previous period of the same length.

The objects aimed at have been mainly to produce a clear flame without smoke or unpleasant odor, by cutting off the heat from the oil reservoir, spreading the flame and concentrating upon it the oxygen of the atmosphere; to cheapen the manufacture of lamps so as to bring them within the reach of all; to accommodate them for lanterns for general use, and for locomotive head-lights, and for signal lights for conductors of railway trains. These objects have been so generally attained that they have gone into almost universal use.

#### CLASS C.—CARRIAGES AND LAND CONVEYANCES.

The applications in this class have been largely in excess of any former year, and the improvements have been numerous and varied, but most of them have been modifications or changes in well-known devices, and are, therefore, not of a character to demand special description or comment.

## CLASS D, E AND Q.—CHEMISTRY AND METALLURGY.

The whole number of cases filed in 1865 was 1,326, and 966 of these were passed for issue. The number filed in 1864 was 818.

The number of distinct arts and manufactures embraced in these classes is so large as to make it out of the question to notice any but the more prominent ones.

The high price of gas-producing coal, and the abundant supply of the light hydrocarbons from petroleum has induced a great many inventors to seek for means of using naphtha, benzine, &c., as a substitute for gas for illumination.

The mode of accomplishing this is to charge atmospheric air with the vapor of the hydrocarbons. In a general way the problem has been long solved; but in practice it is found that to accommodate the varying temperature of the air, the varying density of the naphtha, and the different rates at which the vapor is required for consumption, has presented difficulties which are, as yet, only partly overcome. But several of the devices presented this year show very marked improvement over former inventions.

The treatment of petroleum and its products, so as to purify and render them applicable to new uses, has received a good deal of attention. The heavy parts of petroleum are now largely used for lubricating machinery, and for that purpose seem almost indispensable. Patents have been issued for modes of treating petroleum so as to render it suitable for mixing paints, preserving wood, oiling wool, and making blacking and varnish. Paraffine, the solid nearest related to coal oil, is found useful in coating barrels for coal oil, cloth, leather, and many other articles where water-proof covering is wanted.

Besides patents for new articles of hard rubber, there have been nine patents issued during this year for improvements in the production of this material. Heretofore it has been difficult to give any desired color to hard rubber, except a jet black. By several of the inventions lately patented, any color may be given to this material. It is expected that these inventions will greatly increase the manufactures from hard rubber.

The manufacture of iron and steel has received special attention during this year. Numerous improvements on what is known as the Bessemer process have been patented, and the working of that process in this country is fully established. The strengthening of both cast and wrought iron, by the addition of purifying materials, such as chrome, manganese, cryolite, and various alloys and compositions, has been effected.

Several of these processes, while possessing no great amount of scientific novelty, are quite important in their practical results, in some instances raising the tensile strength of cast iron from thirty to fifty per cent. at a small cost.

A patent has been issued for an improvement on what is known as malleable cast iron, which renders that material of greatly increased value for the manufacture of cutlery, ploughs, and other articles.

Several patents have been issued for making iron and steel direct from the ore. Judging by the specimens shown, the improvements seem to possess considerable utility.

Rich ores, suitable for this course of treatment, abound in this country, and there have been numerous efforts made to establish a successful manufacture of bar iron direct from the ore. But generally, after a brief trial, these efforts have been abandoned.

Improvements on the well-known processes of puddling, smelting, and refining iron have been numerous. These generally relate to labor-saving machinery and processes.

The number of improvements in machinery and processes for obtaining the precious metals have been large. These relate especially to modes of freeing

the ores from sulphur, and to machinery for effecting the amalgamation of the metals in a better manner. It is well known that only a small part of the gold contained in the ore can be recovered by any of the ordinary processes. A patent has been granted for combining a small amount of the metals, sodium or potassium, with the mercury used in amalgamation. This has the effect to greatly increase the affinity between the mercury and gold.

### CLASS F.

#### *Divisions 1 and 2.—Civil and Railroad Engineering.*

The following tabular statement shows the condition of the class of inventions under the above divisions in comparison with the number of applications and issues for the year 1864 :

Months.	Applications received.	Applications issued.	Months.	Applications received.	Applications issued.
<b>1864.</b>			<b>1865.</b>		
January.....	33	24	January.....	57	38
February. ....	35	20	February.....	59	26
March.....	39	22	March.....	88	33
April.....	35	29	April.....	75	35
May.....	33	25	May.....	51	47
June.....	47	24	June.....	63	76
July.....	59	24	July.....	56	41
August.....	39	25	August.....	85	45
September.....	66	41	September.....	58	41
October.....	42	17	October.....	68	59
November.....	45	39	November.....	79	47
December.....	63	71	December.....	60	20
<b>Total.....</b>	<b>536</b>	<b>371</b>		<b>799</b>	<b>503</b>
<b>Increase in 1865..</b>	<b>263</b>	<b>132</b>		-----	-----
	<b>799</b>	<b>503</b>		<b>799</b>	<b>503</b>

This class has kept pace with many others in the office in the development of inventions, although nothing of a peculiarly marked character has become the subject of official action. The improvements patented as well as the applications generally refer to railroads, mining implements, and apparatus used for boring wells. The number of applications covering inventions appertaining to railroads, numbers for the year 1865, 330 ; and those appertaining to boring or operating wells, for the discovery of oil, 256. The development of this rich product of the earth has stimulated invention to an extraordinary degree. The locality of the oil being so deep in the bowels of the earth, requires the use of devices that can penetrate with the greatest rapidity its hidden reservoirs. Numberless difficulties have been met, which the ingenuity of the inventors has already overcome, and many are now the subject of deep thought and anxiety. It is reasonable to suppose, from the progress already made in the development of means to gather this great element of wealth, that in a short time the progress of invention will determine the best and surest method for the attainment of the greatest results.

### CLASS F.

#### *Division 3.—Mechanical Engineering.*

In this division much of interest has been accomplished, for here exists an extended field for the inventive mind, which seems to a great degree to have kept pace with the increasing wants of the people, and anticipated the demand for labor.

The ingenuity of inventors has attempted, by mechanical means, to so control and operate the various machines with which our country abounds, that they have to a very great extent supplied the places of the persons who were made victims of war. In brief, it may be said that during the past year more has been done in this direction than in any previous year of the existence of this office. Hay and cotton presses are embraced in this division, and during the continuance of the war the transportation of hay and straw for army purposes became so vastly increased, that it gave rise to a necessity for some improvements in machines for baling purposes, and the adage "Necessity is the mother of invention" has been abundantly proved in the numerous advancements which have been made to meet the exigency.

To such perfection has the method arrived, that bales of hay or straw can be made so compact as to occupy but little more than one-fourth the space that was required for bales of the same weight in former years. Since the war has ended and the shipment of hay, &c., has diminished, the applications for such devices have fallen off. But the South has been opened to free labor, and now cotton presses are increasing in about the same proportion; showing again that the inventive genius of our people is inexhaustible and adequate to meet any emergency. We may now expect many important improvements in this direction, inasmuch as "king cotton" is hereafter to submit to such compression as free men shall consider proper.

#### CLASS G.—FIBROUS AND TEXTILE MANUFACTURES.

This class embraces all the machinery and processes for separating fibre from plants, for operating upon the fibre, and for the production of fabrics, except those in which the aid of chemistry is required.

The whole number of applications in this class for the year 1865 was 378, as against 338 for 1864, and 276 for 1863; showing an increase of about 10 per cent. over 1864, and of about 31 per cent. over 1863.

Of this number (378) 250 patents were ordered to issue; of which there were for sewing machines 83, (including hemmers, guides, &c. ;) looms and fabrics, 56; spinning machines 33; knitting machines, 20; paper and paper twine machines, 14; carding machines, 13; wool-oiling machines, 9; wool-washing machines, 3; the remainder being distributed among machines for dressing threads, &c., braiding, weaving a covering for cords, measuring cloth, lace and net machines, hat-felting, fulling and finishing felted goods, burring and carding cylinders, thread and yarn winding machines, surface-sizing of wadding, imitation embroidery, &c.

##### *Sewing Machines.*

Prominent among these are those designed for stitching button-holes; among which may be mentioned one which adapts the well-known Wheeler & Wilson machine for this purpose, by giving to the bed-plate a slight shifting motion to allow of sewing over the edge of the fabric, whilst a fixed button through which the needle passes, and a straight fixed guide near the needle, afford a space between them for the passage of a flat cloth-holder having parallel sides and semicircular ends, the cloth being affixed to pins on the upper surface of this holder, and having a motion with its forward half, turning and returning. The feed may be stopped at will when it is desired to strengthen or bar across the square end of the button-hole.

Another carries a short thread, as in hand sewing, first through the cloth and returning through the button-hole. The needle is blunt at one end; its point is uppermost, and it has two eyes in the middle. The range of motion of the needle-arm is gradually lessened as the thread is consumed; the cloth is fed by means of an irregular gear, somewhat of a button-hole shape.

Another machine employs, in addition to the ordinary Wheeler & Wilson bobbin for the lower thread, a similar bobbin to carry a cord or bar thread; each bobbin lies within the cavity of its own revolving hook, whose axes are both in the same line; one hook oscillates, the other revolves; the threads are wound upon the bobbins in opposite directions. One hook catches the needle loop and carries it over its bobbin and over the cord; the oscillating hook then seizes this loop, carries it in the opposite direction and drops it over its bobbin. The four-motion feed is used, but it has, in addition, a lateral and return motion.

In another machine a single thread is used for button-holing; an inclined looper beneath the table, with a crescent-shaped end, advances, rises, and carries a loop above the table and over the edge of the cloth and over a tongue on the cloth plate; it then makes a quarter turn, that the needle may descend in the notch of the looper and within the loop; on its retreat it becomes free from the loop, while the feed advances and pulls the loop off the tongue; this allows sufficient looseness of the stitch to allow it to be laid out flat in turning back the goods, edge to edge, as in the sewing of carpets.

In another, in which three threads are used, a reciprocating hook manipulates the loops in such a manner that the loop of the needle thread shall surround that of the thread carrier, and that the shuttle thread shall pass through this loop of the carrier.

Another machine, in which are used the usual perforating needle and, also, a lower thread carrier, which takes its thread up and over the edge of the cloth, is so modified as to be easily converted into a lock-stitch machine. To effect this the thread carrier is turned upon a pivot out of operative action, while a swinging shuttle carrier is placed in action, and the loop-spreader above the cloth is locked to the needle bar, so as not to rotate as when used in button-holing.

Mr. Humphrey has also some improvements upon his machine patented in 1862, designed, among other things, to give the required increase of feed while sewing around the eyelet or rounded part of the button hole.

Among the improvements designed for sewing with waxed thread upon leather, &c., are the following:

Means for heating the wax and for waxing the thread, and also for heating the metallic parts of this machine near which the waxed thread must pass; improvements in positive take-up levers for the thread; in the form of the shuttle and of the needle; in means for closing the uppers of shoes and gaiters, and for other work on leather, where it is desirable that the line of the seam shall be sunk below the surface of the material, thus dispensing with excessive tension on the threads and avoiding the weakening of the leather, as if the usual groove were cut; in means for avoiding the liability of the goods to become stretched and puckered, and thus preventing the hole punctured by the awl from getting out of its true position for the needle to enter; in dispensing with the usual large cams, thus diminishing friction and noise, and in the use of automatically lifting presser-feet; in means for waxing the needle thread, not, however, until after the thread has passed through the fabric, the shuttle thread receiving its wax from the needle thread, the liquid wax being steadily and automatically forced up from a reservoir into a shallow concave in the shuttle race, a closed door to the shuttle preventing any wax from entering, and a felt or cloth wiper, saturated with benzine, clearing the shuttle of any adhering wax.

Another machine, for sewing the soles upon boots and shoes while the same are turned inside out, has its platform, which sustains all the sewing mechanism, centred upon the driving shaft, and so that it may be raised or lowered, by a rack, to bring the operative mechanism into proper position relatively to the channel in the shoe where the line of stitching is to be made; the table supporting the work is also adjustable vertically. Another of this class automatically registers the number of shoes soled by it.

Several novelties appear in machines for making and stitching ruffles, one of which, whilst feeding the cloth in the ordinary manner, passes it, also, through an auxiliary device secured to the table; a wheel in this device is rotated by the passage of the cloth, and it gives a greater velocity than its own to another wheel, which thus gathers the lower piece of cloth; adjustable hinged spring plates press the cloth upon these wheels, and when the operator does not wish to ruffle, this pressure is relieved by means of thumb-screws.

A box-plaiting apparatus is also connected with a sewing machine, so that in the finished goods, plaited upon the sewing-machine table, there shall be in each single plait two stitches, and in each double fold or box plait four stitches.

From among the other peculiar features observable in sewing machines may be further enumerated the following:

Locating the shuttle-race *above the table*, and supporting it on the needle-arm bracket; giving to the shuttle a *grooved tongue* for its whole length, which supports it in a dovetailed groove in which it travels; employing a *blast of air* to open and properly deflect the loop of the needle-thread, for the shuttle to enter; giving to a feeding wheel a forward and backward movement, in addition to the usual rotary movement; the wheel is locked during its forward movement, thus acting as an ordinary feeding dog, but in its backward movement, instead of falling like a feeding dog, it rotates on its axis, and the surface of the wheel rolls on the under surface of the cloth without moving it; changing the line of direction of a four-motion feed to any line within the range of ninety degrees, by the mere turning of a circular plate in the table through which the feed-dog works; compensating for the wear on its bearings of the revolving looping hook by means of a split bushing, compressible by an adjusting screw; driving the machine faster or slower, or stopping it altogether, while the driving power continues the same; making on a Wheeler & Wilson machine either a simple chain stitch or a chain stitch interlaced with a locking thread; adapting a Wheeler & Wilson machine to the making of the Grover & Baker stitch, as well as the lock stitch; also to the making of a three-threaded stitch, being the lock stitch and Grover & Baker stitch combined; providing means whereby the varying thickness of goods passing under the presser foot shall cause the needle to rise to corresponding elevations, while it shall not fail to descend uniformly to the same point, that its loop may be properly taken by the shuttle or looper; so arranging the crank motions for operating the needle and shuttle, as that the reciprocations of the mechanism shall counterbalance each other, all the primary actuating devices for all the motions (except the needle-arm) being brought into a compact group, and attached to a single piece of casting.

### Looms.

In this class the *card-shaft* of a *Jacquard* has been given an endwise motion in addition to its usual intermittent rotary motion, to admit of weaving different patterns by the same cards.

In *lappet-weaving*, the pattern-wheels in a late improvement have been placed on the side of the looms, instead of on the lay, to admit of working a larger pattern; the needles working vertically as well as laterally.

In another machine the pins in the pattern-wheel are adjustable, to vary the pattern.

In looms for *weaving pile fabrics*, by means of movable rods, both above and below the warp, narrow goods are woven, having a pile both on the upper and lower surface of the material.

In *weaving fabrics with button-holes*, a portion of the dents of the reed have been made with an inclined projection of the length of the button-hole; the reed has a positive upward motion while weaving one side of the button-hole, and a corresponding downward motion when weaving the other side, to allow the in-

cline to gradually adapt itself to the gradually increasing web as woven, the take-up motion of the cloth being stopped during the downward motion.

In *weaving with hair or grass*, or other short materials, another improvement avoids the exposure of the ends of the weft at the edges of the fabric, and weaves it with a selvage edge, and of any desired width; to effect this the hair or grass is previously formed into a continuous piece by a machine, in which it is fed in upon an endless apron in such manner that each filament or hair shall lie parallel with the others, the smaller ends overlapping the larger ends, and these surrounding a central guiding thread or core, to which they are then united by a binding thread wound spirally around the whole.

In the mode of *driving the shuttles* by condensed air, another inventor uses flexible tubes, connected with a reservoir, and places pistons and cylinders at each end of the shuttle-race.

Rising and falling *shuttle-boxes* are operated in another invention through the variable motions imparted by a set of sliding hooks, each pivoted at a different distance from the centre of the same rocking bar.

To adapt *reeds* to beams of different lengths, another inventor makes their ribs elastic, that they may be lengthened and the dents spread out or brought closer together, as may be desired.

Heddle-frames are also made practicably adjustable to any desired length, by being so constructed as to allow more or less heddles to be put on or off with great facility.

An automatic *registering attachment* records the number of yards of fabric woven, and protects against the felonious abstracting of cloth from the loom.

Means are also introduced to change the weaving at will, and without delay, from plain to twill, and *vice versa*.

#### *Hand-looms.*

A marked and increasing activity is visible in improvements in hand-loom; and of these the applications come almost exclusively from the western States.

Their aim is mainly to cheapen, simplify, and render more efficient this class of looms.

In one, the upright rods carrying the harness are interchangeable on the treadles, so as to vary the twill or style of the cloth at pleasure. Others operate the shuttles, harness, and the cloth-beam from the motion of the batten. Tappet-shafts and pattern cylinders are frequently introduced. The difficulties arising from using at times reeds of different thickness are sought to be overcome. An adjustable compound bevelled pinion allows the take-up to be timed as desired, to any point in the vibration of the batten. A pivoted bar on a central picker staff, and to which the picking cords are attached, prevents their being worn away, by keeping them in a right line with the face of the batten. A horizontal adjustability of the bearings of the warp-beam admits of regulating the tension, so as to have both sides of the web uniform.

#### *Spinning.*

Latterly more applications for improvements in spinning *mules* and *jacks* have been received than heretofore.

The object, in mules, has been to cause the tension of the yarn, when building up the cop to operate certain novel devices for equalizing the strain, by operating the counter-faller, and thus gripping an endless belt connected with the carriage, until then, inoperative, and, through the medium of other devices, communicating the corresponding change of velocity to the drum and spindles; to drive the whole of the spindles, on either side of the mule-head, from one common horizontal cylinder instead of from several vertical drums; to dispense with the clutch on the horizontal shaft which runs the whole length of

the carriage; and to regulate the tension for winding-on, dispensing with the use of a weighted lever.

The improvements in *jacks* have been for putting friction upon the driving pulley, by partially sliding the belt upon it from the loose pulley, and so assisting the spinner in winding-on; to insure a simultaneous starting of the delivering, stretching, and twisting operations; to permit the delivering operation to cease at any point during the outward movement of the carriage, and while the stretching and twisting is continued; and to secure a correct registry of the number of yards spun, by devices not liable to be tampered with by dishonest operatives as to register falsely.

An improvement in *spinning rolls*, which have an endwise motion, consists in such a construction as admits of removing their bearing ends when worn, and substituting new ones.

A machine for *making paper cop tubes* takes a strip of paper as broad as the length of the cop tube desired, runs it through the machine, applies paste to its surface, cuts it into proper lengths, and presents it intermittently to a rotating mandrel, around which it is formed into its tubular shape by means of a revolving brush; the completed tube is then discharged by the longitudinal withdrawal of the mandrel, and the operation is repeated.

### *Knitting machines.*

In this important department of the arts inventors are very active. Some very ingenious but complex machines were patented within the year; among them an improvement by Mr. Kilbourn, upon his patent of April 9, 1861. It is a straight frame and knits sheets of fabric, so shaped, and with selvaged edges, as to be ready to be sewed up into the form of stockings. The knitting commences at the top and ends with the toe, some of the needles being automatically withdrawn for narrowing. The knitting of the central portion is suspended, whilst forming two side pieces for the heels; after which the central knitting is resumed to form the upper part of the foot and toe. The sole piece is next formed by taking from the needles the two heel strips, and placing them together and again knitting toward the toe. The edges not united in the machine are sewed together by hand, viz: the seam up the back, and the sides of the foot piece.

*Tubular goods* (such as stockings complete, without seam, and mittens, except the thumb) are also knitted upon a machine having two rows of horizontal latch needles, lying point to point in the same place; a single thread is delivered to each row alternately. The extreme *closed* tip of the stocking is first knitted by the machine, and the continuation of the knitting widens it out and makes it tubular. A Jacquard determines the pattern.

Another inventor employs an *endless chain of removable needles*, linked together by hooks and eyes, the chain being capable of being shortened or lengthened, and combined with a provision for reversing the motion of this chain, and thus making *tubular goods* of different sizes, and also knitting straight pieces of widths, and widening or narrowing the same, the whole being a compact machine, designed for household purposes.

Another employs *needles latched at both ends* and sliding across an open space through which the fabric drops, and makes plain or ribbed goods, the latter having the ribs running either transverse or lengthwise of the fabric; the breadth of the ribs being variable at will. He uses either a straight or circular frame.

In another *endless chain* machine, each needle slides in its own independent frame, and the frames are linked together by hooks and eyes, so that the chain may be lengthened or shortened. No stitch hooks are used; but the loop is clamped between two flat surfaces to allow a new loop to be drawn through it.

Other new features may be briefly summed up as follows: long latched needle

combined with short latched ones, to allow the interlacing of the loops of one row with those of two or more rows, instead of with the adjacent row only. The knitting of shoe lacings from a number of strands of yarn, coming directly from the spun cops, and without being twisted together, these strands being supplied to a barbed needle, and knitted as one into a single chain by the usual knitting or crochet stitch. Sundry improvements are also made in needles, whereby slides are used instead of latches to close and open the hooks.

### *Carding, &c.*

The improvements under this head are not particularly marked, and relate to means for feeding the fibre and preparing it for being fed; the construction of the cylinders to avoid their liability to spring under the influence of centrifugal force; arranging the feeding-in cylinder so as to facilitate its being easily removed, to be cleaned, ground or repaired; retaining the short waste fibre escaping from the main cylinder; a more uniform stripping of the doffer and reduction of wear; giving the doffer comb an adjustable drawing action on the fibre; means for cleaning cylinders, by a card-clothed brush cylinder having wire teeth about double the length of those of the cylinder to be cleaned; and to hanging the flats of an endless chain of self-stripping top cards upon their axes in such manner that they can accommodate themselves to the necessary angle to the surface of the main cylinder, required while traversing over the cylinder.

In a cotton combing machine two nipping cylinders rotate intermittently, and by their opening and closing jaws transfer the fibre from one to the other, so as to comb both ends. The feed-rollers and comb vibrate to and from the first nipping cylinder, and deliver to it a tuft from the lap or fleece; this tuft is then acted upon by a combing cylinder having graduated rows of teeth; it next passes to the second nipping cylinder and to a similar combing-drum, and then to a doffer.

### *Wool-oiling.*

In connection with the carding machine, and to be attached to it, several improvements have been made for oiling the wool, embracing among them the following features: Raising the oil from its reservoir by the capillary attraction of a wick whose upper end hangs over a rod or pipe, (which may be heated if desired,) the ridges of a revolving fluted roller press gently this wick and wipe out the oil and convey it to the surface of a plain roller, which by gentle pressure imparts it to the wool upon the feed apron, dripping the oil upon the wool from the pendent edge of a piece of cloth which receives its supply from a drum revolving in a reservoir—a can with an air-tight top and a discharge-pipe at its bottom to supply a tank; while another pipe for air, from the top of the can above the oil line, also extends down into the tank as far as it is intended the oil shall rise; the closing of the oil pipe by the ascending oil in the tank prevents further discharge; in the tank a roller revolves in contact with another above it which serves to spread the wool; a strip of wire gauze attached to a shaft, and which is intermittently immersed in an oil bath and then suddenly sprung back so as to shower the oil upon the wool on an endless apron; a longitudinally grooved roller revolving step by step within an oil tank, so that the oil within each groove shall be permitted to drop through a corresponding opening in the bottom of the tank, an endless wire gauze apron beneath receiving and conveying the oil to the wool on the feed cloth; an independent scraper to keep the pressing roller clear of the oiled wool adhering to its surface, the same being interposed between the pressing roller and the top feed roller of the carder; an oil tank with an enclosed revolving dipper to take up and convey the oil to a revolving brush, which latter conveys it to the feed rollers; revolving blades within a reservoir dashing the oil up to a trough which conveys it to a perforated

revolving disk having a roof above and a slotted pan beneath it, dripping the oil from a reservoir into the mouth of a vertical tube having a ball and socket connection with the side of a cylindrical case which nearly surrounds a revolving brush; this brush, striking a deflector at the mouth of the case, sprinkles the oil upon the wool; by turning the case on its axis, the spray will be scattered over a greater or lesser surface of the wool.

*Paper-making.*

The inventions in this class are designed to retain the water between the grinding surfaces, and thus keep the pulp from clogging; to improve the durability and efficiency of the bed-knives in grinding engines; to provide for the adjustability of such knives to the desired elevation as they are worn away; to prevent the water from running back upon the pulp; to substitute for the felt or canvas a woven fabric of several plies, loosely interwoven and formed into an endless belt of uniform thickness by lapping the ends, as in Baker's patent, October 22, 1861; and to finish sheets of paper between two flexible sheets of highly polished copper, each of which passes over a roller, the rollers being tightly compressed together and the ends of the copper sheets being sustained by cords and weights so as to move forward and backward.

Sundry improvements have also been made in the manufacture of paper twine.

*Winding spools of commerce.*

A most ingenious foreign invention, patented here, automatically takes up the common marketable spools upon which sewing cotton is to be wound; places them in position for winding; winds them full; stops when the required quantity is wound; cuts an incision in the head of each spool; fixes securely the thread therein; severs the thread; discharges the spool; takes up fresh empty ones, and starts to wind again.

*Lace or netting machines.*

In this machine one-half of the threads are disposed in the manner of warp threads, the other half being carried each by its separate shuttle; these shuttles by means of a vibrating frame are taken from a stationary frame beneath the horizontal threads, and are simultaneously carried above them; a lateral motion is then given to all other threads, so that each shall cross two of the shuttle threads, after which the shuttles descend. Vibrating levers are alternately brought into action, to beat up the threads evenly at the points of crossing. No weft is used.

*Imitation embroidery.*

As a strong and cheap but equally beautiful substitute for hand-embroidered canvas, such as is used for slipper patterns, &c., a fabric is so woven or stamped that its surface shall present, throughout, minute square elevations; this surface is then printed with any pattern or colors desired, and closely resembles the embroidered goods.

CLASS K.—FINE ARTS AND GAMES, (INCLUDING PATENTS FOR DESIGNS.)

It is a curious fact that the war should have disturbed the inventive genius of our people in so small a degree in the ornamental arts. But the happy termination of the rebellion has allowed men to return to their former pursuits with increased vigor, as shown by the applications for patents in this class:

In the year 1860 we received 742 applications; in the year 1861 we received 458 applications; in the year 1862 we received 421 applications; in the year 1863 we received 472 applications; in the year 1864 we received 529 applications; in the year 1865 we received 787 applications.

The nature of the inventions is shown by a few of the following sub-classes. Seventy-seven applications received this year are for improvements connected with the art of printing, forty for improvements in musical instruments, seventy-eight are for improvements in photography. The rest are for book-binding, jewelry, engraving, pens and pencils, safety paper, postage and revenue stamps, bank notes, &c.

After examination five hundred and three patents were granted, and three hundred and ninety-four applications were rejected as unpatentable.

Two hundred and seventeen of the patents granted are for designs, the rest for mechanical devices. Many of these inventions possess an interest surpassing the limit of a few remarks in a report like this; it is sufficient to say that at no former period have there been so many applications for patents in the useful and ornamental arts; and I believe the value of the inventions to the public has not heretofore been surpassed.

#### CLASS I.—FIRE-ARMS AND IMPLEMENTS OF WAR, SPORTING, AND FISHING.

The successful termination of the war, early in the year, has produced a notable reduction of the number of applications for inventions and improvements in warlike implements; the number is, however, still nearly double that of the year preceding the war, and will most probably remain permanently higher, although destined, no doubt, to fall considerably below its present amount. In view of the time usually required to fully introduce even valuable improvements, inventors will naturally appreciate the advantage of the maxim that bids us prepare for war in time of peace—well knowing that whatever approves itself on careful trial, will ultimately be adopted by the nation, on the principle of an enlightened self-interest.

The whole number of applications filed during the year in matters pertaining to ordnance, small-arms, their ammunition, and the miscellaneous incidents of the military art, is shown in the following table, in comparison with a similar statement for the preceding year, and also for the year before the war.

	1860.	1864.	1865.
Cannon.....	12	52	17
Projectiles.....	17	74	45
Small-arms.....	78	155	126
Cartridges.....	17	38	38
Miscellaneous.....	15	39	27
	<hr/> 139	<hr/> 358	<hr/> 253

A comparison of the number of applications in this class filed during the first six months of the year, with the number filed during the last six months, shows the following proportions:

	1865: first 6 mos.	Last 6 mos.	Whole year.
Cannon.....	10	7	17
Projectiles.....	33	12	45
Small-arms.....	73	53	126
Cartridges.....	20	18	38
Miscellaneous.....	16	11	27
	<hr/> 152	<hr/> 101	<hr/> 253

Under the designation "cannon," are included various methods of mounting and directing guns, as also improvements in gun-carriages. With "projectiles" are embraced various packing bands and sabots for adapting them to rifled

ordnance, and also improvements in shells and their fuzes. Among "small-arms" are included, besides improvements in revolving cylinders and breech-loading devices, various improvements in magazines, locks, &c. Of "cartridges," a large portion relates to methods of priming them, or rendering them inflammable on percussion. And in "miscellaneous" are included various incidents of sights, bayonet attachments, ram-rod worms and scrapers for cleaning gun barrels, caps, cap machines, cartridge-boxes, torpedoes, tents, &c.

In the following table are shown the number of improvements in fire-arms, &c., actually patented during the last two years :

	1864.	1865.
Breech-loading cannon.....	13	3
Other improvements in cannons and carriages.....	23	13
Projectiles.....	55	31
Breech-loading small-arms.....	59	58
Revolving fire-arms.....	17	21
Other small-arms.....	8	5
Cartridges.....	18	12
Miscellaneous.....	47	36
	<hr/> 240	<hr/> 179
	<hr/>	<hr/>

It is interesting to observe that while the class generally has considerably fallen off, improvements in breech-loaders have continued as abundant as ever, and improvements in revolvers, which are most largely used in personal defence, or as the armament of the citizen, have actually increased. While nothing among the above-mentioned patents can properly be selected as worthy of special notice for its pre-eminent merit, it may be safely affirmed that no historic war has been so prolific in the rivalry of invention, and in the reality and variety of improvements in the implements of warfare, as that which has just been waged by our government for the maintenance of its territorial authority and national sovereignty.

#### CLASS J.—HOUSEHOLD FURNITURE.

In this division the number of applications received during the year was 724, and 427 patents were issued; besides which, there were many cases passed for issue, which were at the close of the year awaiting the payment of the additional fee.

The class embraces almost everything used in furnishing a dwelling-house, except the heating and cooking departments; and it is one of the peculiarities of the inventions that they are such that every family can use them to great advantage.

Judging from the number of washing machines and wringers patented, our people should have the reputation of being the most cleanly people upon the earth. In the manufacture of some of these, especially wringers, large factories have been established, and a great amount of money invested.

During the last six months there has been quite a competition between inventors of brooms, of flour sifters, and of bread and meat cutters.

The most numerous inventions and patents are washing machines and wringers, 92; bread and meat cutters, 35; brooms and brushes, 34; bedsteads, beds and bed bottoms, 31; flour sifters, 23; clothes dryers, 20; tables, 15; chairs, 13; mops, 10.

#### CLASS K.—HYDRAULIC AND PNEUMATICS.

This class comprehends the mechanical devices adapted for the reception, transmission, and application of the forces, of liquids and fluids.

Among the improvements patented during the last year are the following :

An overshot water-wheel having a partition in each bucket nearly concentric with the periphery of the wheel, and extending more than half-way to the next bucket, in order to retain a portion of the water until the bucket has reached its lowest position, a hole in the base of each bucket permitting the flow of the water outside of the described division, and within said division of the bucket next in advance.

In horizontal scroll wheels, divisions transverse to the buckets are formed to retard the outflow of the water. The retention of water in the casing beneath the wheel is provided for, to relieve the pressure of the wheel upon its steps. Buckets inclining toward the periphery receive their water from a scroll having its bottom formed of a spiral plane longitudinally, and inclined transversely. In wheels receiving water at the periphery, annular gates are elevated and depressed by a horizontal shaft and pinions which move vertical ratchets. In a horizontal wheel, receiving water through several chutes or ports, on the upper side, a partial revolution of a disk or gate closes all these chutes simultaneously.

In water elevators for wells, and in lubricating cups for journals, many minute modifications have been made.

The pressure of water flowing through a cock is regulated by a counter-current of determinable volume presenting its resistance to a flexible diaphragm by means of which a valve in the cock is held to duty. In a globe valve cock the stuffing box is below the screw arrangement, which is detachable to permit grinding the valve.

A flange on the periphery of the vertical valve moves in a corresponding groove surrounding the valve seat. A beer faucet, in screwing into the barrel, displaces a plug, which returns to its position by a spring when the faucet is withdrawn, so that waste is wholly prevented. A vertical valve stem is hung in a surrounding yielding diaphragm, which prevents the rising of the liquid. A flexible ball, constituting a valve, is held by a vertical swivelled follower. An elastic body, fashioned like a long acorn, is held by its cup or flange under the screw-cap, and is opened by a cam movement on top, which contracts the body in the direction of its length by means of a lifting rod secured in the centre of the valve. A soft metal valve is attached to its follower by a joint which admits of adaptation of position to the valve seat. The nozzles of beer faucets are arranged for exciting the drawn liquid by a forcible jet of liquid or air, after the receptacle has been filled. A flexible lining in a faucet is held closed by a spring arrangement, the depression of which permits the flow.

Several vertical pumps are arranged to work the piston in a lateral cylinder, communicating at top and bottom with the main tube. In double-action submerged pumps, ball and other valves are arranged in pistons, communicating with hollow piston rods. Several pistons in a pump are operated by as many rods, some being hollow and concentric with each other, and others independent. In others the valves are held in position, and a section of the tubing moves thereon.

Pumps for deep wells, generally making provision for the presence and escape of gas, are numerous. Detaching and withdrawing the operative parts, at whatever depth, by peculiar arrangements and movements of the rods, has attracted the attention of several inventors.

The appliances for inducing the flow of oil by the pressure of hot or cold air or steam, are numerous and varied. Heat is also applied in different ways to render the oil fluent. Supplemental tubes are also applied for the escape of gas from the pump tube.

A rotary pump has its pistons guided by central cams; another receiving its water centrally beneath, expels it, by concave extension wings, through a scroll.

A horizontal rotary air-pump is enclosed in a casing kept more than half full of water, the buckets being so curved that when their outer extremities strike

the water they enclose each a volume of air, the compression of which upon the surface of the water forces it through a tube, whence it flows out through a hollow end of the shaft. In an air-pump of vertical movement water is used as the medium of forcing air from an adjoining chamber, the receding of the water causing the induction air-valve to open again.

Deep well tubes are packed by means of the inflation or lateral expansion of flexible packing in lieu of the seed bags in former use, through which packings, in some instances, auxiliary tubes are conducted.

Pistons are packed by the flow of water through their sides, and the consequent expansion of their peripheries.

#### CLASS L.—LEATHER AND HARNESS.

Numerous improvements have been made during the year in the diversified and complicated machinery used in the manufacture of boots and shoes.

Some of these machines seem to cover almost the entire process; all tend to perfection by a series of experiments and improvements. In nearly every stage of the manufacture separate pieces of machinery have been made to do their work. By the proper appliances and the use of machinery the leather is reduced to any desired thickness and pliability, and the lasts are so shaped that the boot or shoe can be made upon them to fit as close and smooth as a glove upon the hand.

Such, in fact, has been the advancement in the improvement of machinery for cutting the leather into shape, lasting it, putting the parts in position, and pegging, nailing, and sewing them together, and then trimming, burnishing, and finishing the work, that in many establishments shoes are turned off, during the working hours, at the rate of one pair a minute, complete. Important improvements, and answering an excellent purpose, have been made by attaching India-rubber soles, and rubber and leather combined, to leather uppers, by sewing and cement, while sabots, wooden soles, attached by screws and rivets, have been much improved.

The improvements in hand tools for the use of shoemakers and saddlers are very marked for their increased simplicity, compactness, and aid in the saving of labor. In the manufacture of harness, saddles, stirrups, bridles, trunks, carpet and mail bags, many new and ingenious arrangements, uniting simplicity with comfort and increased safety, have been made. Snap-hooks, buckles, skates, ice-creepers, &c., have also employed the attention of inventors, and many novel combinations patented, combining simplicity and cheapness with better adaptation.

#### CLASS M.—LUMBER.

In this class there were 331 applications received during the year, of which twelve were for reissue, and three for extension.

Of this number, 179 have been patented, or ordered to issue, leaving 152 either rejected or waiting the further consideration of the applicant. The 179 patents in this class issued during the year are distributed as follows:

Saw-mills, 6; head-blocks for saw-mills 2; sawing machines, 24; circular sawing machines, 3; saws, 4; shingle machines, 8; cork-cutting machines, 5; planing machines, 5; mortising machines, 3; turning lathes, 6; wheelwrights' machines, 5; barrel machines, 2; veneer cutters, 1; wood splitting, 6; blind wiring, 3; tools, 45; and miscellaneous, 13.

No great leading idea has been developed in this class of inventions during the past year; the applications are confined to devices that make the machines they improve either better or cheaper. Forty years ago nearly all the work in a saw-mill was done by a reciprocating upright saw, working at slow speed; but now the saw must reciprocate at a higher rate of speed, (if such saw is used.) The main part of the sawing is now done by large circular saws, which reduce the cost of the mill in its details, and experience has shown that mills

should be constructed so as to be movable; since, unless the timber can be floated to the mill in water, it is easier to carry the mill to the timber than the timber any considerable distance to the mill.

In wood-bending there has been much done, for in constructing large vessels timber is used differing in shape from its natural growth, which is changed in shape to suit the wants of the constructor by the powerful machines now used for such purpose.

In barrel machinery there has been a great change; since the immense production of petroleum, oil has to be mainly transported in casks of wood; the inventions are mostly for cheapening the manufacture, as well as strengthening the cask, and by sawing the stave to the shape it is to have when in the barrel, which makes a stronger cask, because none of the strength of the hoop is expended in clamping the stave to its shape.

In boring machines some improvement has been made, in one direction, by boring a square hole with a tool, all whose devices revolve therein; and in another direction, by having a series of annular cutters attached to a tool for boring at the same time a number of tubes or pipes.

#### CLASS N.—MATHEMATICAL AND PHILOSOPHICAL INSTRUMENTS—ELECTRICITY, &C.

A great diversity of subjects is usually presented in this class of inventions, but electricity claims much the largest share of attention. It is remarkable, also, that the proportion of electrical inventions increases every year. During the year 1865, of 234 applications in this class, 82 were upon electrical and magnetic subjects; 34 upon clocks and watches, and 118 of a miscellaneous character.

Hitherto the applications of electricity and magnetism for remedial purposes have been referred to Class O of Surgery, but it has been thought best to make a distinct subdivision of such inventions, under the head of Electro-therapeutics, and transfer them to Class N, for the reason that, in almost all such cases, the decision upon the claim involves inquiry into electricity and magnetism rather than surgery or medicine. These are not included in the above estimate. It may be a surprise to some to learn that the subtle agent of electricity is playing such an extensive part in the theatre of practical mechanics, and that up to the year 1857 more than five thousand patents had been granted, in England alone, for various applications of electricity to the arts, and since that time probably half as many more.

Prior to 1857 upwards of three hundred patents had been granted in England on the subject of electrical cables and conductors for telegraphs, and since that time probably more than that number. It cannot be expected that a single year will bring about many striking developments in electrical science or its application to the useful arts; but the past year has not been unfruitful in this respect. Improvements in electric printing telegraphs have been patented, giving evidence of the highest order of mechanical genius; and also some improvements in the galvanic battery of great practical value.

Since the introduction in electric telegraphy of communicating or rather reading the telegraph by sounds instead of visible signs or imprinted characters, it has become an object to devise means by which the audibility of the sounds would be increased.

To this end the receiving magnet is supported upon a sounding box, through which a tension rod passes, and is so arranged that the sonorousness of the box is varied at pleasure by means of an adjusting screw. These magnets are technically termed sounder magnets, and as they are for the most part the re-

ceiving magnets—that is to say, the fine wire magnets—the printing or registering local magnet is now generally out of use. In fact, in most of the lines of telegraph of the present time the only feature of the Morse telegraph preserved is the alphabet, and this is now an alphabet of sounds instead of characters. After several years of practice the telegraph operators who read by sound become so expert that the continual click of half a dozen different sounders in the same room does not interfere with the reading of their own, and they will even carry on a conversation with a bystander while receiving and committing to writing the telegraphic message.

However desirable such a mode of operating, it is nevertheless liable to frequent errors, and should, and will finally, give place to printing telegraphs for important business and monetary transactions. One of the contingent disadvantages of the phonetic telegraphy is the liability of disclosure to other parties who may be near enough to hear the sounds. For the purpose of obviating this evil, several patents have been taken out for confining the sounds within certain limits accessible only to the operator himself.

A phonetic telegraph has also been patented in which a continuous sound is interrupted or modified to indicate the signs or alphabet.

One of the most interesting developments pertaining to magnetic telegraphy is a mode of making the fine-wire receiving magnets of naked wire, instead of wire covered with silk, as hitherto practiced. No insulating material in the wire is used, except between the different layers. Strange as it may appear, a more perfect insulation is attained than by wire covered with silk or cotton and varnished. The wires are laid in the coil by accurately working machinery in such manner as not to be absolutely in contact, although to the naked eye they appear to touch. The spaces appear very plainly under a small magnifying power, and this space offers the very best medium of insulation. By this ingenious contrivance the wires are brought closer to each other than when covered with silk, and the difference is so great that in a common sounder or receiving magnet, twelve more turns can be wound on one length of the coil than before. Although this is a very decided gain in favor of the efficiency of the coil, it is not all, for a great saving is effected by dispensing with the silk covering, which is very expensive.

Another improvement in phonetic telegraphs has been patented, exhibiting a great deal of ingenuity and scientific study, in which the deflections of a magnetic needle are made to produce the sounds which are magnified by a peculiar acoustic arrangement so as to become audible to the operator.

In connection with this telegraph an ingenious and very novel self-regulating apparatus is introduced by which the current is maintained at a uniform strength, and at the same time susceptible of adjustment so as to vary the strength at leisure.

#### ELECTRO-THERAPEUTICS.

While it is refreshing to witness the unabated ardor with which the genuine applications of electricity and magnetism are prosecuted to practical results, it is a matter of regret to find so much empiricism pervading the community in reference to the remedial virtues of the subtle agent. With many it seems to be the panacea for all “ills that flesh is heir to.” Electricity as a remedy now takes a very high rank, and has done incalculable service to suffering humanity under judicious administration; and electro-therapeutics has been elevated to a science almost as exact as any other branch of medicine, especially by the French physicians; but, like every other branch of the healing art, is liable to abuse and productive often of mischief in unskilful hands. Among the curiosities of this class calculated to appeal to popular belief in electrical marvels are such inventions as electrical and magnetic combs, brushes, bracelets, spectacles, pen-holders, trusses, beer glasses, soles for shoes, gymnastic clubs, &c.

## CLASS P.—ELECTRO-CHEMISTRY, &amp;c.

Electricity is still the resort to account for the explosion of steam boilers, but in every instance the rationale is not in full accordance with existing laws. A patent has been granted for preventing scale or incrustation of steam boilers by an arrangement of conductors said to have an electrical function. The invention was claimed by contesting parties, and on both sides numerous affidavits from creditable sources were brought to prove the genuineness of the discovery, which is one of inestimable value if fully realized.

Electricity and magnetism have also been enlisted in petroleum mining, and a patent granted for introducing heat into the shafts, for softening the paraffine adhering to the walls of openings by means of coils of platinum wire enclosed within a copper case and heated by the galvanic current, thus permitting the unobstructed flow of petroleum.

A patent has also been granted for electro-magnetic "grab-irons," to be let down into the shafts and seize and bring up pieces of broken drills and bits of iron or steel.

## INSULATORS FOR TELEGRAPHS.

Several patents have been granted for insulators for telegraph wires, all aiming at one point, viz: the extension of the insulating surface between the point of suspension of the wire and the insertion of the hook upon which the wire is suspended, and also to cover this surface, as far as possible, so as to prevent the deposition of moisture upon it. It is somewhat remarkable that notwithstanding the many devices patented in this and former years, for this purpose, nearly all the telegraphic lines of the present time are supported upon the old bell insulator of glass, the very first kind used in this country.

## CLOCKS AND WATCHES.

Number of applications, 34. The prevailing features of improvement have been contrivances for winding up the watch and setting the hands without the use of a key, and quite an interesting variety of inventions has been patented for this purpose.

Also patents have been granted for devices by which all risk of breaking the works by winding up too tight is avoided, and also by which the train is saved from injury in case of a rupture of the mainspring. Watches and timekeepers have been improved more within two or three years past than in any equal period of their history, and the introduction of chronometer movements into watches for the pocket has been perfectly successful. In this connection a patent has been granted for a very ingenious and accurate movement in which the introduction of an additional pallet, in conjunction with a movement patented last year, operates to dispense with the holding spring common in chronometer movements.

## CLASS O.

Of this class 31 applications have been for improvements in artificial limbs, 21 for improvements in dentistry, and 112 of a miscellaneous character.

The havoc of war has begotten a multitude of inventions to supply the place of amputated arms and legs, and from among the mass some may be selected as examples of skill and successful operation.

One inventor heralded his application by the introduction of a lad wearing his artificial leg, who had learned to run and to skate; another, a soldier, sent a letter to the office written by an artificial hand and arm of his own invention.

The chirography was rough but legible. Other remarkable performances might be cited to show that artificial limbs have been brought to a high state of improvement, and that the United States are in advance of other countries at present in regard to this invention. Some of the legs and arms presented are of beautiful finish and model, and one of the substantial improvements is in the material by which very strong limbs are made with very little weight. The legs have attained nearer to perfection than the arms or hands. In one instance the several motions of flexing and extending the arm and fingers has been very successfully accomplished by the several motions that could be made by a stump of the humerus or upper arm.

In dentistry one of the most notable improvements patented is the introduction of aluminum for the base-plate of artificial teeth. The greater lightness of this metal, its freedom from oxidation, and its comparatively low price give promise of a great reform in this branch of art. Perhaps no invention of the present day illustrates more beautifully the application of chemical science to the mechanical arts than the introduction of vulcanite or hard rubber as the base-plate for artificial teeth. While this material can be furnished at a trifling cost, it seems to be the very perfection of base-plates, offering facilities for moulding and attachment greater than metals, and being light, durable, firm, sufficiently elastic, and susceptible of coloring in imitation of the natural gums.

#### CONSERVATIVE SURGERY.

Under this head an interesting and important invention has been patented, by which the usefulness of the arm may be preserved to the patient after the operation of exsection or removal of a part of one or more of the bones of the arm.

#### CLASS P.—METALLURGIC MANUFACTURES.

Invention is the basis underlying all skilled labor, and must necessarily have been achieved, before skilled labor became possible. Invention is the product of work performed by the brain; a house, a machine, or a railroad is the product of physical labor, or of work done by the hand. Once invented, the construction of any one of these becomes easy, for nothing is then wanting but the manual labor and the directing skill of the workman.

It is true that, without human wants to call it forth, skilled labor to make it available, and proper conditions under which to apply, and develop it, invention, though possible, would at this time be restricted to very narrow limits; but it is also true, that invention, thus stimulated, and by these means developed to the wonderful extent which we now behold, has with equal force reacted upon these very means or conditions, and caused new wants to be made known and new aims to be aspired to, by the very confidence with which it has come to be depended upon to supply all needful ways and means.

This latter remark is forcibly illustrated by the inventions of the class now under consideration, in their relations to very many of the industrial arts, and particularly to those which, by their great magnitude and the superior skill and intelligence required in their development, are justly regarded as being at once the greatest civilizing agents, and as leading the way in material and social progress.

As at present constituted, the class of metallurgic manufactures includes branches to a certain extent distinct from one another, of which the principal or most important are—

1st. Founding, or the process of casting, and, included therewith, the form and construction of moulds, flasks, &c.

2d. Machines of general application, such as those for forging, rolling, planing, boring, punching, shearing, &c.

3d. Machines for the manufacture of articles of sheet metal, for cutting, bending, stamping, spinning, riveting, &c.

4th. Machines adapted exclusively to certain special uses, as to the manufacture of nails, bolts, nuts, screws, needles, pins, files, chains, horseshoes, &c.

5th. Tools and implements of every description required in the construction of machines and in the fabrication of metallic articles.

To confirm what has been said as to the importance of this class of inventions, one has only to answer to himself this question—what would be, at the present time, the condition of labor, of the industrial arts, of individual and national wealth, or even of civilization, had invention in this department remained stationary at the point to which it had attained fifty, or even twenty-five years ago?

Of the inventions patented during the past year, none can be considered remarkable for superiority over similar inventions of previous years, although there is very evidently a general and progressive improvement; but what is remarkable is the greatly increased number of applications for patents received during the past year.

In illustration of this, the following statement is submitted, showing the total number of applications in this class received yearly during the last four years, viz:

For the year ending December 1, 1862.....	349
For the year ending December 1, 1863.....	381
For the year ending December 1, 1864.....	615
For the year ending December 1, 1865.....	1, 005

#### CLASS R.—NAVIGATION.

The inventions in this class patented during the past year do not present any especially remarkable features, nor has the number of applications exceeded those of former years so much as in the other divisions. One hundred and forty-three applications were filed, and one hundred and eleven patents issued.

#### CLASS S.—STEAM ENGINES.

The number of cases received in this class during the year was 517; the number rejected was 150; and the number passed for issue, 392.

The subjects which seem to have engrossed the minds of inventors in this class principally for the last year are steam generators, balanced slide valves, piston-packing, automatic boiler feeders, air and gas engines, and oil ejectors for oil wells. In steam generators some marked improvements have been made, among which may be noticed some for the instantaneous generation of steam by injecting a given quantity of water into a highly heated receptacle, which water is injected in a finely comminuted form, and flashed into steam without coming in contact with the sides of the receptacle. Others are for the better combustion of the fuel consumed, and consist of devices for burning the gaseous products of combustion.

In slide valves the object seems to be to perfectly balance the valve under all circumstances, whether admitting or exhausting steam; in some of these, provision is made for the direct exhaustion of steam through an aperture in the back of the valve.

The improvements in piston-packing consist in arrangements for keeping the packing in contact with the cylinder, and for the more accurate and better construction of the joints, to prevent leakage of steam. One important feature in such packing consists in making provision for applying it to horizontal engines without disconnecting the piston rod from the cross-head, or without taking the piston out of the cylinder when one end only of the cylinder is accessible.

In automatic boiler feeders the object aimed at, is to so construct them so that they will elevate the water from a well or other reservoir, and supply it to the boiler

in such measured and exact quantities as that the water level in such boiler will be constantly at a given point, and thus prevent liability of accident from low water.

In air and gas engines the improvements are various, and in some cases important. They consist, in one class, of improvements designed to adapt them to the consumption of petroleum as fuel for heating the air to be used in the cylinder. In another class they consist in arrangements for conducting the products of combustion, mingled with a given quantity of steam, to the cylinder, there to be worked expansively for the production of motive power. In another they consist in arrangements for the manufacture of gas from petroleum and other light volatile oils, and for conveying such gas to the cylinder, where by means of an electric spark, or by means of a burner placed in a proper position, it is exploded, and its explosive force is utilized by the piston and caused to propel the machinery attached thereto.

In ejectors for oil wells, in which steam or compressed air is used as the agent to force out the oil, the improvements are varied, and consist in devices constructed upon the general principle of the Giffard injector, but are adapted to the limited space in which they are of necessity operated. These ejectors may properly be divided into two classes, one of which is more particularly adapted to the use of steam as the propelling agent, and the other to the use of compressed air as such agent.

In the first of these the instrument is at or near the bottom of the well, and steam is conveyed to it from a generator placed upon the surface, and through a pipe passing down through the seed bag or other packing of the well, sometimes within and sometimes without, but alongside the discharge pipe.

This steam induction pipe is curved at the bottom so as to give the steam an upward direction within the discharge pipe for the oil, by which means a partial vacuum is formed, and the oil rushes in and is forced up and out at the upper end of the oil pipe.

Those designed for the use of compressed air are constructed and operated in the same manner, except that they are connected with an air-compressing pump, which is capable of so compressing the atmosphere as to give it the required force for elevating the oil.

In reciprocating and rotary engines, steady if not rapid progress is being made in improving them, but these consist in the general arrangement and adaptation to certain positions and kinds of service rather than to marked improvements in their details.

In trunk engines a very marked feature is the placing of the working or induction and eduction valves, which are cylindrical in form, within the trunk, thus rendering the engine more compact and less complicated than the old form of engine.

In relation to condensers, all inventors seem to be, if not strictly orthodox, at least highly conservative, and as a consequence no very marked improvement has been made in them during the past year; but what has been done relates to modifications of the old plan and to the details thereof.

In steam and water gauges steady progress is being made, but no very marked change has been made in them recently. Considerable attention has been given to devices for removing scale from boiler tubes, several of which have been patented within the year.

With reference to other and less important devices which are included in this class, no very marked improvements have been made. So far as the aggregate of improvement is concerned, it is believed to have been at least as great the last year as it has been in any preceding one; and it is proper to say that much has been done by the inventors in this class to improve the general character of the steam engine, as well as to promote their own interests by adding very materially to the general wealth and prosperity of the country.

## CLASS T.—GLASS, STONE, AND CLAY.

Some few modifications and improvements have been made in the making of glass and the tools for its manufacture. These are the most marked in the mere general substitution of machinery for hand labor, and in certain economical arrangements for the saving of fuel.

Various improvements are noticeable in the machinery for rock drilling. These principally consist of improved methods for rotating the drill, and the adjustment of it in a position more or less inclined, as the nature of the work may require.

In the machinery for the manufacture of brick, as well as the mode of preparing the materials out of which brick and tiles are made, there have been some improvements. In the apparatus for moulding the brick there is an expedient for getting them out of the moulds and into a position where they can be readily grasped by the hand and carried away, being lifted entirely out of the mould on the bottom of the same by the use of a stationary cam. The bottom is movable and on hinges, and so arranged as to throw the brick over on its thin edge.

Lime-kilns, stone-dressing, and sawing machines, clay and cement pipe machines, as well as the tools they require, have also drawn the attention of inventors, and show a decided improvement over former devices.

## CLASS U.—WEARING-AP PAREL.

In nothing relating to health, comfort, convenience, or taste is so little creative genius manifested as in the habiliments or costume of the American people. In disregard of all their peculiarities, of the universality of industry among them, of the variations of climate in different latitudes and localities, and of the sudden and severe vicissitudes of temperature in many regions, we accept, from social classes in Europe having no existence here, prescribed forms or fashions of apparel characterized by little else than their inappropriateness to our uses, their confined and rigid discomforts, their lack of gracefulness in form and color, and their great expensiveness. In female attire, comfortless and extravagant as it is, there are at times some expressions of taste and some independence in design; but in the garments of men, even these are not ventured; and the whole nation submits to imported examples and prescriptions without a protest, although every individual possessing either taste or judgment gives daily utterance to the impatience with which he conforms to fashions alike arbitrary and irrational.

Shirt collars had attained to the conventional standard of perfection when they became square in outline, exceedingly white, stiff to hardness, and sized and pressed until the textile character of the fabric had become almost totally concealed. At this point it became evident that the manufacture was indebted for its excellence to its close resemblance to bleached and sized paper, the substitution of which for linen was consequently attempted. For a time the attempts were attended with but limited success, partly because the resistance of a strong popular repugnance had to be encountered, and partly because paper of the required quality was not found in commerce. The use of cheap cotton cloth between sheets of paper proved successful, and the new manufacture gained its way to public favor in this form. At length paper possessing all the desired qualities was produced, and a large proportion of the collars in commerce are now made from this material.

In the past year patents have been granted for a paper collar divided at the line of turning down, but having a strip of textile material on the hidden side to turn upon the band; and its ends are in another fashioned and colored to imitate a neck-tie beneath portions of the bands. Button-holes are enlarged for the admission of buttons; back of the seat of the button when fastened auxiliary bifurcated pieces of hard material are placed behind the button-hole. Bows re-

sembling neck-ties are attached to the front button by elastic bands, wires, or clasps. Collars are turned down upon a curved or straight line by being carried through a slot of such form by a blade of rounded edge, or prepared for such fold by the pressure of a blade of like character upon the collar when lying upon a cushioned surface. A paper collar and bosom are formed in one piece or separately. Shirt bosoms are also made of flexible enamelled steel.

In hoops for skirts, clasps are formed adapted to every desired bend of the hoop. The covered wire is sized by being carried around cylinders, between sizing rollers and over heated drums. The waists of ladies' dresses are gathered upon a hoop previously adjusted to the waist of the wearer, said hoop having a groove on its exterior; and an elastic band fitting therein holds the gathered material in position.

Suspenders are attached to the shirt or connected with the shoulder braces. Shoulder braces are connected to corsets and adapted to be worn by persons engaged at machine-sewing and other employments inducing a stoop of the shoulders.

There are several modifications of buttons united to the cloth by means of clamping disks upon the shanks; others are held to the cloth by means of tongues proceeding from the collet and turned down behind the cloth, and others by rivets.

Combs are formed of fragments of material embraced in metal backs, and framed in such manner that the frame may be repeatedly fitted with a comb thus formed.

A hat frame is constructed of a series of arched stays radiating from a common centre at the crown and fastened to a ring at the brim. An irregular enlargement is made in the rear brim to admit the air into the hat. In the manufacture of hats and bonnets the block is so arranged with gearing as to present every desired part to the operator, and an arm is extended and operated in like manner for the application of the brush or other tool.

A hat body is formed of two thicknesses of material, both having minute perforations, but which are not coincident. Hats and caps are formed of woven wire, to the outside of which a fabric may be glued. Hats and caps are covered with fabrics united by caoutchouc or gutta-percha applied by heat and pressure, and also by heated moisture.

Hat bodies are stretched by being placed on rib formers and elevated between small rollers, which press the yielding material inward between the ribs and thus extend the body. A flexible band, fitting the head, but smaller than the hat, has, at intervals, pins passing through it and through small cushions into the hat body, upon which they are turned down under the outer band, thus leaving an air space between the hat and head.

Hat-brushing machines operate the brushes upon a series of hats by a cam movement, supplying the requisite heated water through the brushes by an adjustable arrangement.

Hats of flexible material are expanded into shape by means of spring hoops inserted in the periphery of the brim and in smaller circles thereof, the application of concavo-convex wire forming a special modification of this invention.

T. C. THEAKER,  
*Commissioner.*

## ALPHABETICAL LIST OF PERSONS WHOSE PATENTS FOR INVENTIONS AND DISCOVERIES HAVE EXPIRED DURING THE YEAR 1865.

No.	Patentee.	Invention or discovery.	Date.	Class.
7,896	Abbott, Theodore T.	Tires for railroad car wheels.	Jan. 24, 1851.	X.
8,301	Adams, Benjamin F.	Cutters, cheese, butter, and bread.	Nov. 11, 1851.	XVII.
8,477	Adams, Henry W.	Zinc, white, use of steam to make.	Oct. 28, 1851.	IV.
8,081	Ahrens, Adolph F.	Teeth, setting.	May 20, 1851.	XX.
8,082	Ahrens, Adolph F.	Teeth, setting.	May 20, 1851.	XX.
8,232	Akins, William H., and J. D. Felthousen	Sewing machines.	Aug. 5, 1851.	III.
8,260	Akrill, John.	Pottery and other ware, working clay for.	Aug. 26, 1851.	XV.
8,309	Allen, David.	Washing machines.	Dec. 25, 1851.	XVII.
8,621	Allen, John.	Teeth, mineral, setting.	Dec. 25, 1851.	XX.
8,987	Allen, John L.	Carriage tops, raising.	Jan. 14, 1851.	X.
8,157	Allen, Nicholas Y.	Harvesters, grain.	June 10, 1851.	X.
8,240	Ambrose, D. F., and O. L. Reynolds.	Cloth-folding machines.	July 22, 1851.	III.
8,619	Ames, J., and G. L. Wright.	Rolling paper, machines for.	Dec. 23, 1851.	XVIII.
8,169	Anderson, Charles.	Boilers, revolving.	June 17, 1851.	VI.
7,961	Andrews, Elijah A.	Trunk handles.	Mar. 18, 1851.	XVI.
7,965	Andrews, Joseph E.	Steering apparatus.	Jan. 14, 1851.	VII.
8,863	Anthony, Charles G.	Daguerreotype pictures.	Jan. 1, 1851.	XVIII.
8,362	Anthony, David, sen.	Scythe fastenings, construction of.	Jan. 1, 1851.	I.
8,981	Arnall, Joshua M. C.	Corn shellers.	Jan. 7, 1851.	XIII.
8,180	Armstrong, Samuel T.	Gutter-percha hollow ware.	June 24, 1851.	IV.
8,752	Armstrong, Samuel T.	Furnaces, grate bars for.	Aug. 17, 1851.	V.
8,547	Arnold, Alonzo C.	Bats for felt cloth, &c., crossing the fibres in forming.	June 10, 1851.	III.
8,954	Ashcroft, E. H.	Boilers, steam, insulated fusible plug for.	June 10, 1851.	VI.
8,198	Atwood, Charles.	Hooks and eyes, wire.	July 21, 1851.	XXI.
8,136	Avery, Cyrus.	Horse-power.	June 3, 1851.	XII.
8,045	Avery, Samuel.	Blind slats, apparatus for operating.	Apr. 15, 1851.	II.
8,950	Avery, Thomas C.	Electro-magnetic engines.	Feb. 25, 1851.	VIII.
8,067	Babcock, Robert G.	Horse-shoe machine.	Apr. 25, 1851.	II.
8,350	Bacon, George, and Rd. Raven.	Piano-fortes, horizontal, square.	Aug. 26, 1851.	XVIII.
8,966	Bailey, T. R.	Lathes.	July 1, 1851.	XIV.
8,852	Baldwin, David.	Mattresses, spring, for invalids.	Jan. 7, 1851.	XVII.
8,853	Baldwin, Cyrus, assignor to Stark Mills.	Sight, means of renovating and correcting.	Dec. 2, 1851.	III.
8,049	Ball, Jonathan.	Gold amalgamator.	Apr. 22, 1851.	XX.
8,344	Ball, William.	Pumps for elevating water mixed with mineral substances.	Apr. 22, 1851.	XI.
8,662	Ball, William.	Petting cloth, machinery for.	Sept. 9, 1851.	III.
8,921	Bishop, George G.	Shoe lathes.	Sept. 23, 1851.	XVI.
8,381	Bannister, Isaac.	Buildings, iron, connections for the beams and columns of.	Feb. 25, 1851.	IX.
8,951	Banks, Joseph.	Mills for grinding corn and cobs.	July 22, 1851.	XIII.
8,743	Bantz, Sidney A., and William Andrews.	Planing machines.	May 27, 1851.	XIV.
8,163	Barlow, Nelson.	Washboards.	June 17, 1851.	XVI.
8,161	Barnes, William T.	Planers, seed.	May 27, 1851.	XXI.
8,195	Barnum, Jacob.	Cloth machines for washing.	Dec. 2, 1851.	III.
8,563	Barrow, Thomas.	Cutting machines.	July 29, 1851.	III.
8,263	Barwaalee, John H.			

8,300	Bacon, Alonso.	Yarns, staining and dyeing, apparatus for	Nov. 16, 1851	III.
8,301	Bas, William L.	Lock, chronometric	Dec. 31, 1851	II.
8,318	Batchelder, John M.	Telegraph wires, insulators for	Oct. 14, 1851	VIII.
8,373	Beach, Ambrose S.	Traverse, revolving, overboard	Dec. 1, 1851	II.
8,304	Bean, Jonathan	Traverse, revolving, overboard	Nov. 1, 1851	I.
7,923	Beardale, Backus A.	Snowing machines, screens for	Feb. 4, 1851	V.
8,006	Beardale, George W.	Planing machines	May 20, 1851	XIV.
8,497	Beardale, George W.	Planing machines	Nov. 4, 1851	XIV.
8,436	Beatty, Charles H.	Lock, door	Oct. 14, 1851	II.
8,303	Bee, Benjamin F.	Planer, hand	Nov. 11, 1851	XIV.
8,140	Beech, Ralph B.	Earthenware, baked, ornamenting	June 3, 1851	XV.
7,949	Beer, J. D., and Isaac Winlow	Planing machines	Feb. 23, 1851	XIV.
7,937	Beer, Philo S.	Irregular forms, machines for turning	Feb. 16, 1851	XIV.
8,374	Bell, Daniel D.	Potato diggers	Dec. 9, 1851	I.
7,983	Bennett, Phineas	Pumps, rotary	Jan. 7, 1851	XI.
8,137	Bessemer, Henry	Cane juice, machines for expressing	June 30, 1851	IV.
8,123	Biddle, William	Weighing machines for grain, self	May 27, 1851	XII.
7,898	Bigelow, Erastus B.	Looms for weaving piled fabrics	Jan. 14, 1851	III.
7,884	Bigelow, Erastus B.	Looms for weaving tapestry carpets with particolored warp	Jan. 7, 1851	III.
7,982	Bigelow, Erastus B.	Weaving, delivering particolored warps in	Mar. 18, 1851	III.
7,983	Bigelow, Erastus B.	Looms, jacquard, for weaving cut-pile fabrics	Mar. 18, 1851	III.
8,339	Bigelow, E. B.	Woven fabrics, wires for making pile in	Nov. 25, 1851	III.
7,899	Billings, A. M.	Hubs and axles, connecting and disconnecting	Jan. 14, 1851	X.
8,105	Bissell, Levi	Springs, carriage	May 20, 1851	X.
8,498	Bissell, Levi, assignor to Levi Bissell and Lyman Kinley	Springs, carriage	Nov. 4, 1851	X.
8,086	Bixby, Rufus, Cyrus Bixby, and John Gast	Planing machines	May 13, 1851	XIV.
8,184	Blauc, John	Hemp manufacture of, from okra	June 24, 1851	III.
8,440	Bliss, Alfred	Cans or canisters, tops of	Oct. 21, 1851	II.
188	Blodget, Sherbourne C., and John A. Lerow	Sewing machines	(Release)	
190	Boardman, Horace	Boiler, steam, and furnace thereof	(Release)	
8,215	Boardman, John	Washing machines	July 15, 1851	XVII.
8,102	Boardman, Luther	Spoon, manufacture of wire-strengthened	May 20, 1851	II.
8,375	Bogart, C.	Sounding boards for musical instruments, construction of	Dec. 9, 1851	XVIII.
8,441	Bogart, Charles A.	Stoves, air-heating	Oct. 21, 1851	V.
8,439	Bolen, John G.	Burglar alarms	Oct. 21, 1851	XXII.
8,442	Boone, Thomas G.	Ship's whistles	Oct. 21, 1851	VII.
8,005	Boot, Henry	Cloth, machines for folding and measuring	Apr. 1, 1851	III.
8,506	Booth, Ezekiel, and Ezra Ripley	Car seats	Nov. 11, 1851	X.
8,033	Booth, Jonathan L.	Winnowing machines	Apr. 8, 1851	I.
8,114	Boyden, Otis	Alloys of iron, zinc, and nickel	May 27, 1851	IV.
8,098	Boynton, Leander W.	Bars for felling, making	Apr. 23, 1851	III.
8,287	Boynton, L. W.	Wool, machines for cleaning	Aug. 13, 1851	III.
8,342	Boynton, N. A.	Stoves, parlor cooking	July 23, 1851	V.
8,365	Brandels, L.	Bronze powder, process of making	Sept. 16, 1851	IV.
8,404	Brett, Ephraim C.	Flocks, machines for opening and cleaning	Oct. 7, 1851	III.
7,959	Brewer, William, and John Smith	Paper moulds	Mar. 4, 1851	III.
8,133	Briggs, Joseph W.	Collars for harness	June 3, 1851	XVI.
7,965	Briggs, Luther, Jr.	Hammers, trip, method of adjusting the stroke	Mar. 11, 1851	II.
8,164	Brown, Charles F.	Rudder, balanced	June 10, 1851	VII.
8,269	Brown, Charles F.	Masts and spars, telescopic connection of	June 17, 1851	VII.
8,363	Brown, Luther	Brick machines	Aug. 5, 1851	XV.
8,363	Brown, L. H.	Piano-fortes	Sept. 23, 1851	XVIII.

## List of persons whose patents for inventions have expired, &amp;c.—Continued.

No.	Patentee.	Invention or discovery.	Date.	Class.
8,319	Brown, Samuel.....	Kilns, line.....	Aug. 26, 1851.	XV.

7,965	Clark, Oliver	Scythe fastening	June 3, 1851	III
8,154	Clausen, Peter	Flour, vegetable, process for treating	Apr. 22, 1851	II
8,055	Clay, William	Rods, tapered, metallic, apparatus for rolling	July 15, 1851	III
8,218	Clements, S. A.	Hemp, &c., machine for dressing flax	Oct. 7, 1851	I
8,408	Clements, William P.	Seed-planter, device for sowing in a	Jan. 1, 1851	X
7,866	Cochran, Elias M.	Car couplings	Dec. 9, 1851	IX
8,555	Cole, Cyrus C.	Fences, hurdle	Jan. 1, 1851	XI
7,867	Collan, John B.	Pipe, lead, machines, nozzles for	Nov. 25, 1851	VI
8,543	Collins, J. and J. J. G.	Boilers, apparatus for steam	Aug. 26, 1851	XV
8,323	Colbe, John P.	Glass, machine for cutting	Dec. 2, 1851	II
8,578	Conant, J. S.	Gas regulators	Sept. 16, 1851	II
8,367	Cone, N. F.	Vice, bench	Nov. 4, 1851	I
8,483	Constant, Isaac	Cultivators	Dec. 2, 1851	XX
8,556	Cook, Carlos A.	Soda powders, &c., machines for crimping package papers for	June 3, 1851	XI
8,129	Cook, Horace, assignor to H. S. Cook and S. Colburn	Comb-cutting machines	July 22, 1851	V
8,241	Cook, Samuel	Flour bolts	Aug. 19, 1851	XIII
8,298	Cook, Ransom	Ventilating and excluding dust from railroad cars	July 29, 1851	IX
8,254	Coons, Mathias P.	Fences, flexible	June 24, 1851	I
8,146	Cooper, John, administrator of Benjamin Giger	Ploughs	June 10, 1851	XIII
8,170	Cortias, George H.	Governors	Jan. 21, 1851	XIV
8,148	Cortias, George H.	Cut-off and working the valve of steam engines	Oct. 28, 1851	I
7,868	Cornell, William E.	Planing machines for dressing the edges of boards	Apr. 8, 1851	XIII
8,463	Cory, Myron	Seed-platters	Apr. 8, 1851	XIV
8,026	Graue, Aaron D.	Horre powers	Dec. 2, 1851	II
8,092	Grosby, Pearson	Sawing machines	July 8, 1851	IX
8,564	Grosby, C. O.	Plus, mode of papering	June 10, 1851	XXI
8,202	Grosby, C. O.	Plus, mode of papering	Nov. 18, 1851	II
8,007	Grosby, C. O.	Plus, machines for sticking on paper	July 29, 1851	VI
8,149	Grover, Sommers	Railings	May 6, 1851	XV
8,522	Curtis, S.	Combs, machines for cutting	Aug. 12, 1851	XX
8,250	Cutler, Job	Metal tubes, method of liberating from forming mandrel	Dec. 9, 1851	X
8,077	Cutting, James A.	Brick arresters	Aug. 19, 1851	XVII
8,271	Dane, James, Darius Healy, and Gary Cummings, assignors to Isaac and Francis Dane	Sperk machine	Nov. 4, 1851	XVI
8,297	Dare, John S.	Shoulder-braces combined with abdominal supporters	May 27, 1851	XXI
8,576	Davies, Thomas A.	Cars, railroad, running gear of	May 20, 1851	XX
8,269	Davis, A. R.	Brushes, manufacture of	Apr. 15, 1851	XVIII
8,482	Davis, Isaac	Collars, horse, machines for forming	Sept. 9, 1851	IV
8,127	Davis, Nathan, and Higgins Harrison	Boot-cripp	Jan. 14, 1851	II
8,100	Day, Horace H.	Shoe, India-rubber	Jan. 7, 1851	XVIII
8,044	Dennison, Andrew	Boxes, machine for cutting out the corners and scoring edges of paper for	Nov. 11, 1851	XIV
8,521	Dodge T. H.	Printing presses		
8,356	Donchet, G. F. de	Paint, manufacture of		
7,900	Dorwart, Joseph	Tuyeres		
7,885	Draper, Francis	Inkstand fountain		
8,505	Drawbaugh, Daniel	Slave-jointing machine		

## List of persons whose patents for inventions have expired, &amp;c.—Continued.

No.	Patentee.	Invention or discovery.	Date.	Class.
8,395	Drummond, J. W., assignor to Smith Ely.	Chair seat.	Dec. 16, 1851	XVII.
8,565	Duchemin, Daniel and George.	Clay, machines for working.	Dec. 2, 1851	XV.
8,219	Dugdale, Samuel G.	Churns.	July 15, 1851	I.
8,118	Duckies, George B.	Carriages.	May 27, 1851	X.
8,596	Dutcher, E. and W. W.	Weavers' temples.	Dec. 16, 1851	III.
8,143	Dutcher, Davis.	Churns.	June 10, 1851	I.
8,150	Eames, Albert.	Stones and other substances, machines for facing and polishing.	June 10, 1851	XV.
8,197	Eames, Daniel W.	Carriages, railroad, running gear of.	July 1, 1851	X.
8,255	Eddy, Thomas J.	Wheels, cast-iron car.	July 29, 1851	X.
8,163	Ellis, Rufus, assignor to William M. Chase.	Knitting machines.	June 17, 1851	III.
7,953	Engelbrecht, Theodore F.	Hinges, double-acting spring.	Feb. 25, 1851	II.

8,068	Faber, George.	Boilers, &c., steam apparatus for indicating the height of water in.	May 13, 1851	VI.
8,361	Fager, George.	Gauge for indicating pressure of steam.	Sept. 16, 1851	III.
8,025	Fagin, Lewis, and H. C. Hayman.	Boiling floor, apparatus for.	Apr. 8, 1851	XXIII.
8,117	Farron, Enoch L.	Swings, portable.	May 27, 1851	XXVIII.
8,587	Farris, Richard M.	Organs and piano-fortes, combining.	Dec. 16, 1851	XI.
7,918	Fields, William, Jr.	Hydraulic ram.	Jan. 28, 1851	VII.
8,407	Fisher, Charles Frederick.	Propeller, the endless chain.	Oct. 7, 1851	I.
7,870	Fisher, Daniel.	Churns.	Jan. 1, 1851	XI.
8,239	Flanders, J. F.	Pumps for raising water, &c.	July 22, 1851	XVI.
8,510	Fonda, Jacob C.	Hides, machine for cutting.	Nov. 11, 1851	III.
8,261	Foster, John C.	Flocks, machine for grinding.	July 29, 1851	XVII.
8,030	Foster, Celia R. P., late Celia R. P. Wood.	Tables, ladies' work.	Apr. 8, 1851	X.
8,331	Foster and Marsh, assignors to J. Foster.	Wheels to axles, method of securing.	Sept. 2, 1851	I.
8,494	Foster, N., G. Jessop, H. L. Brown and C. P. Brown.	Seed planter.	Nov. 4, 1851	X.
8,220	French, Oliver N., assignor to O. N. French and Eb. Stevens.	Axle-boxes for journals for railroad cars.	July 15, 1851	XIV.
7,938	Frye, John A.	Tonguing, jointing and rebating tools for.	Feb. 19, 1851	VIII.
8,409	Fulton, James.	Encasement for linepieces.	Oct. 7, 1851	III.
7,980	Gaines, Edmund P.	Mill-stones, dressing.	Mar. 4, 1851	XVII.
8,445	Gallahue, Alpheus C.	Boots and shoes, machines for pegging.	Oct. 28, 1851	III.
8,463	Gambrell, Horatio N.	Cotton duck, dressing.	Oct. 21, 1851	X.
7,967	Gardner, P. G.	Wheels, cast-iron car.	Mar. 11, 1851	II.
7,968	Gardner, P. G.	Tires by continuous rolling, machinery for making.	Mar. 11, 1851	II.
8,605	Gardner, Perry G.	Swaging machine, rotary.	Dec. 23, 1851	(Extended)
8,422	Gardner, George W.	Sieve-grate bars.	Nov. 19, 1851	II.
8,522	Gardner, James M.	Casting the backs upon the teeth of currycombs, method of.	Mar. 18, 1851	IV.
7,996	Gardner, Smith.	Sugar, apparatus for draining.	Sept. 16, 1851	XIII.
8,363	Gardner, William.	Governors.	June 10, 1851	III.
8,151	Garretsen, Isaac H.	Looms, hand.	Feb. 18, 1851	III.
7,938	Gavett, H. L. F.	Press, acid, machine for making.	Sept. 9, 1851	XVIII.
8,341	Gibbert, I.	Piano-fortes.	Sept. 30, 1851	

6,311	Gillett, Nathaniel, and Lyman Allen	Presses, self-acting chesno	Aug. 26, 1851	XIV
6,309	Gilliland, G. W. O.	Spind machines	Apr. 29, 1851	XIV
6,307	Gilliland, G. W. O.	Ploughs, wheeled, cultivating	Sept. 9, 1851	I
6,306	Gilman, Samuel H.	Valve, slide, method of connecting the, with the rock-shaft	Jan. 1, 1851	VI
6,305	Gilman, Samuel H.	Cut-off, adjustable	Mar. 18, 1851	VI
6,304	Gilman, Samuel H.	Bagasse, machines for drying	Oct. 28, 1851	V
6,303	Gilman, Samuel H.	Lock for safes, &c	Dec. 2, 1851	II
6,302	Gilman, Samuel H.	Ploughs	Nov. 18, 1851	I
6,301	Gilman, Samuel H.	Ploughs	Nov. 25, 1851	I
6,300	Gilman, Samuel H.	Ships, light	Feb. 4, 1851	VII
6,299	Gilman, Samuel H.	Ice, process for artificial production of	May 6, 1851	XXII
6,298	Gilman, Samuel H.	Writing, apparatus for giving ease to the arm in	Apr. 29, 1851	XXII
6,297	Gilman, Samuel H.	Stone drilling machine	Sept. 16, 1851	XV
6,296	Gilman, Samuel H.	Tuyers, tight joint for	Aug. 5, 1851	II
6,295	Gilman, Samuel H.	Stoves, air-light, Franklin	Mar. 11, 1851	V
6,294	Gilman, Samuel H.	Stoves, cooking	Apr. 22, 1851	V
6,293	Gilman, Samuel H.	Brick presses	May 13, 1851	XV
6,292	Gilman, Samuel H.	Bedstead rails, machine for cutting screws on	Apr. 1, 1851	XVII
6,291	Gilman, Samuel H.	Piano-forte action	Sept. 9, 1851	XVIII
6,290	Gilman, Samuel H.	Brick machines	Aug. 5, 1851	XV
6,289	Gilman, Samuel H.	Equalizers or power-regulators	June 17, 1851	VI
6,288	Gilman, Samuel H.	Stoves, cooking	Sept. 9, 1851	V
6,287	Gilman, Samuel H.	Iron, measuring and cutting	Nov. 4, 1851	II
6,286	Gilman, Samuel H.	Locomotive, running gear of	June 17, 1851	X
6,285	Gilman, Samuel H.	Hemp and fax, machines for scutching and hackling	Sept. 23, 1851	III
6,284	Gilman, Samuel H.	Broom corn, machines for stripping seed for	Sept. 23, 1851	I
6,283	Gilman, Samuel H.	Broom corn, machines for assorting	Jan. 1, 1851	I
6,282	Gilman, Samuel H.	Springs, carriage	June 10, 1851	X
6,281	Gilman, Samuel H.	Steam traps	May 20, 1851	V
6,280	Gilman, Samuel H.	Window curtain fastening	Mar. 11, 1851	XVII
6,279	Gilman, Samuel H.	Lock, bank, powder-proof	July 29, 1851	II
6,278	Gilman, Samuel H.	Cocks, machine for cutting	Oct. 14, 1851	XXII
6,277	Gilman, Samuel H.	Decks	Nov. 4, 1851	XVII
6,276	Gilman, Samuel H.	Key swivel, nibbed	Jan. 28, 1851	II
6,275	Gilman, Samuel H.	Mill-stones	Apr. 13, 1851	XIII
6,274	Gilman, Samuel H.	Hooker-up, mechanical	July 8, 1851	II
6,273	Gilman, Samuel H.	Spike machines, book-binding motion for	Sept. 9, 1851	II
6,272	Gilman, Samuel H.	Propellers of machinery, to be used in currents	Nov. 18, 1851	XI
6,271	Gilman, Samuel H.	Stoves, double oven	Sept. 2, 1851	V
6,270	Gilman, Samuel H.	Dental, changing reciprocating into a rotary	Aug. 14, 1851	XIII
6,269	Gilman, Samuel H.	Monitors, hydraulic cups	Aug. 26, 1851	XX
6,268	Gilman, Samuel H.	Looms, cylinders for figuring	Mar. 18, 1851	III
6,267	Gilman, Samuel H.	Pens for rolling paper	Jan. 28, 1851	XVIII
6,266	Gilman, Samuel H.	Printing presses	Oct. 21, 1851	XVIII
6,265	Gilman, Samuel H.	Ventilators	June 17, 1851	V
6,264	Gilman, Samuel H.	Stave dressing machines	July 22, 1851	XIV
6,263	Gilman, Samuel H.	Carriages	Dec. 16, 1851	X
6,262	Gilman, Samuel H.	Springs, carriage	July 15, 1851	X
6,261	Gilman, Samuel H.	Kettles and articles of like character from disk of metal, machinery for making	Dec. 16, 1851	(Extension)
6,260	Gilman, Samuel H.	Mill-stones, machines for dressing	Sept. 16, 1851	XIII

*List of persons whose patents for inventions have expired, &c.—Continued.*

No.	Patentee.	Invention or discovery.	Date.	Class.
8,106	Hebbard, Albert.	Wheels, cast-iron car.	May 20, 1851.	X.
8,056	Hedge, Samuel, assignor to George W. Hedge.	Saw mills.	Apr. 22, 1851.	XIV.
7,994	Hedy, George, Samuel Conrad, and James Wigle.	Ploughs, adjustable land sides of.	Mar. 25, 1851.	I.
8,205	Heinemann, H.	Buttons, silk-covered.	July 8, 1851.	XXI.
8,467	Hendrix, Davis R.	Boat-trees.	Oct. 28, 1851.	XVI.
8,013	Heywood, Simeon.	Wheels and axles, connecting and disconnecting.	Apr. 1, 1851.	X.
8,322	Hibbard, Harmon, assignor to Jared A. Hibbard.	Buggy tops.	July 15, 1851.	XV.
8,046	Hill, Charles F., and Henry Hoffman.	Marble ornamenting.	Apr. 15, 1851.	XXI.
8,144	Hill, Thomas W.	Comb-cutting machine.	June 10, 1851.	XIV.
8,185	Hilde, William.	Saw-set vice.	July 1, 1851.	X.
8,550	Hinkley, Benjamin.	Trucks, railroad car.	Dec. 2, 1851.	XXI.
8,333	Hobbs, Charles.	Stereoscope plates, moulding and casting.	Sept. 2, 1851.	XVII.
8,595	Hobbs, Nehemiah.	Wheels, railroad car.	Nov. 18, 1851.	X.
7,954	Hognet, Francis.	Table, extension.	Feb. 25, 1841.	XVII.
8,272	Holden, Moore.	Millstones, dressing.	Aug. 5, 1851.	XIII.
8,095	Holkins, Elijah S.	Saw-set.	Apr. 8, 1851.	XIV.
8,008	Hollingsworth, John.	Wheat fans.	Apr. 1, 1851.	I.
8,061	Hollingsworth, John.	Snut machines.	Apr. 22, 1851.	XIII.
8,527	Hollingsworth, John.	Mill for grinding and bolting.	Nov. 18, 1851.	XIII.
8,205	Holly, B., and J. B. Wheeler.	Grooving lumber, machine for.	July 8, 1851.	XIV.
8,264	Hornor, David.	Seed-planters.	July 29, 1851.	I.
8,307	Hosley, Abijah S.	Ships' model-measurer.	Aug. 19, 1851.	VII.
8,087	Hoskyns, Chaudos.	Rudder, apparatus for relieving the helmsman from the shock of.	May 13, 1851.	VII.
8,605	Hotchkins, Julius, assignor to the Hotchkiss and Merriman Manufacturing Company.	Suspenders.	Dec. 23, 1851.	XXI.
8,119	Hoyt, William H.	Omnibus steps.	May 27, 1851.	X.
8,244	Hubbard, M. G.	Springs, carriage.	July 22, 1851.	X.
8,540	Howe, Elias, Jr.	Fastening for garments.	Nov. 25, 1851.	XXI.
7,969	How, Thomas P.	Trucks, connecting them with car bodies.	Mar. 11, 1851.	X.
8,193	Lazell, Almon E., and Davenport Lasell.	Bread-cutters.	July 1, 1851.	XIX.
146	Hudson, S. A.	Sword canes.	(Release).	
8,130	Hulings, Margaret.	Spinning wool, hand machines for.	June 3, 1851.	III.
8,607	Humiston, Willis.	Candle-making apparatus.	Dec. 23, 1851.	IV.
8,138	Hunt, Marshall J.	Planters, seed, gearing of.	June 3, 1851.	I.
8,300	Huntley, Hosea H.	Stoves, cooking.	Aug. 19, 1851.	V.
8,541	Huntley, Hosea H.	Stoves, cooking.	Nov. 25, 1851.	V.
8,355	Hurlbut, C. R.	Stoves, cooking.	Sept. 9, 1851.	XIV.
7,928	Hurlbut, Sidney S.	Gauges used in turning.	Feb. 4, 1851.	I.
8,131	Hutchins, Samuel B.	Harvesting, grain.	June 3, 1851.	VI.
8,590	Lyde, Joseph, assignor to Thos. J. Eddy.	Crank indicator, arrangement of machinery for actuating the.	Dec. 23, 1851.	XIV.
8,608	Legalle, Gustave W.	Lathe, chucks for.	Dec. 23, 1851.	XVIII.
8,467	Legalle, J. K.	Zollan attachment.	Nov. 4, 1851.	V.
8,336	Irvine, William.	Radiating surfaces.	Sept. 2, 1851.	VII.
8,109	Joan, Mark M.	Vessel, method of raising sunken.	Aug. 12, 1851.	II.
8,107	Jefferson, Farnel.	Spike machines, gauging and heading movement for.	May 20, 1851.	II.

8,937	Jenkins, J.	July 22, 1851	XVI.
8,974	John, Simon, Jr.	Mar. 11, 1851	XVI.
8,968	Thom, A.	Sept. 16, 1851	XI.
8,962	Thomas, Alexander	Sept. 30, 1851	XI.
8,102	Johnson, Robert	May 30, 1851	V.
8,101	Johnson, John, assignor to Elias Johnson	Aug. 5, 1851	III.
8,981	Johnson, John	Nov. 11, 1851	X.
8,980	Johnson, A. W.	Mar. 25, 1851	XIII.
7,906	Jones, Gilbert D.	Jan. 14, 1851	X. (Release)
7,191	Jones, John	Feb. 4, 1851	XVI.
7,994	Jones, Thomas W.	July 22, 1851	X.
8,224	Jones, John	Sept. 16, 1851	II.
8,276	Jones, John	July 22, 1851	II.
8,337	Jones, S. T.	Sept. 16, 1851	II.
8,367	Jones, William R.	July 22, 1851	I.
8,307	Jones, William	July 6, 1851	XI.
2,273	Judd, Albert H.	Aug. 6, 1851	III.
7,939	Judd, Charles T., patented in England to David Christie	Feb. 18, 1851	XVII.
2,076	Kain, James R., and Spencer Lewis	May 9, 1851	XVII.
7,973	Kaufman, Abraham	Jan. 1, 1851	IV.
8,254	Kempson, James C.	Sept. 2, 1851	II.
8,427	Kenyon, William, assignor to Joseph P. Hagh, A. Har- tupce, and J. Morrow	Oct. 14, 1851	XVIII.
8,353	Kerrison, R. M.	Sept. 9, 1851	XIV.
8,591	Ketchum, Charles	Dec. 9, 1851	V.
8,596	Ketchum, William F.	Oct. 7, 1851	IV.
8,415	Klein	Nov. 25, 1851	XVII.
8,745	King, Daniel	Oct. 21, 1851	X.
8,746	King, James T.	Dec. 23, 1851	XXII.
8,590	King, James	July 8, 1851	V.
8,998	King, William	Feb. 4, 1851	III.
7,991	Kinnear, Delamar	Nov. 11, 1851	XVIII.
8,941	Kirk, S. W.	Mar. 25, 1851	IX.
8,519	Kiteon, R.	Apr. 1, 1851	IX.
8,002	Klepper, Henry	July 1, 1851	XVII.
7,916	Klepp, Moses L.	Apr. 15, 1851	IX.
8,000	Knight, George H.	Mar. 25, 1851	XVIII.
8,468	Knight, George H.	Sept. 9, 1851	IX.
8,187	Knower, S. W.	Mar. 18, 1851	X.
8,058	Kraft, Benjamin	Mar. 25, 1851	I.
7,993	Krause, John	Feb. 25, 1851	XIV.
8,350	Krebs, Charles W.	Oct. 28, 1851	(Release)
7,950	Kreier, Randolph	Sept. 9, 1851	(Extended)
7,954	Lamb, John, and C. H. Root	July 22, 1851	XVI.
7,968	Lamb, John, and C. H. Root	July 1, 1851	XVII.
8,000	Lamson, Ebenezer O.	July 1, 1851	X.
8,002	Lamson, Nathaniel	Mar. 25, 1851	I.
7,985	Lamson, Nathaniel	Feb. 25, 1851	XIV.
7,985	Lane, Ader	Oct. 28, 1851	(Release)
7,903	Larkin, Ester L., adm'x of John E. Larkin, deceased	Sept. 9, 1851	(Extended)
8,009	Laborette, David L.	July 22, 1851	XVI.
8,247	Lawrence, Erasmus	July 1, 1851	XVII.
8,235	Lawrence, James A., assignor to Robert & Sampson		
8,193	Lazell, A. F., and D. Lazell		

*List of persons whose patents have expired, &c.—Continued.*

No.	Patente.	Invention or discovery.	Date.	Class.
8,598	Lenner, Adam.	Cannon for throwing chain-shot.	Nov. 18, 1831	XIX.
8,428	Levington, Robert.	Axe-boxes for railroad cars.	Oct. 14, 1831	X.
8,416	Lewis, Spencer.	Bedssteads, machines for cutting screws on rails of.	Oct. 17, 1831	XVII.
8,119	Lewis, William, and W. H.	Fastening pedestals to columns.	June 17, 1831	XVIII.
8,025	Lewis, William, and W. H.	Duplicating plates, apparatus for buffing.	July 22, 1831	XVIII.
8,513	Lewis, William, and H. J.	Duplicating plates, apparatus for buffing.	Nov. 11, 1831	XVIII.
8,609	Lewis, William, and William H.	Leaves, adjusting.	Dec. 16, 1831	XX.
8,608	Lepoldt, Frederick.	Scarifiers.	May 20, 1831	XX.
8,399	Litchfield, Lacey.	Weavers' shuttles.	Sept. 30, 1831	XX.
8,541	Littledell, Dennis G.	Stoves, cooking.	Apr. 13, 1831	V.
8,571	Livemore, Lorenzo D.	Cars, railroad, coupling.	Nov. 11, 1831	X.

8,314	McGregor, Geo., Robert Lea and Thomas G. Clinton.	Padlocks.	May 27, 1831	X.
8,010	McKinley, Peter.	Hallers, rice.	Aug. 26, 1831	X.
8,610	McKinnon, Charles I.	Wine-making, madder.	Dec. 23, 1831	XVI.
8,449	Merrell, Henry.	Wine-making, the mouth-piece for.	Oct. 21, 1831	XVIII.
8,017	Mellish, Henry.	Split machines.	Apr. 1, 1831	XIV.

No.	Name	Invention	Date	Class	Remarks
8,307	Merritt, John	Filling vegetable and other texture, chemical processes for	Aug. 19, 1851	III.	
8,308	Merrick, Edmund	Lathe machine	Sept. 23, 1851	XIV.	
8,309	Merrill, William	Grain separators and fans	Apr. 8, 1851	XIV.	
8,310	Merrill, Roosevelt T.	Sugar vacuum pans	Oct. 21, 1851	IV.	
8,311	Miller, James M.	Hand-press	July 15, 1851	XVIII.	
8,312	Miller, Sylvanus	Harvesting machines, rake to	July 15, 1851	I.	
8,313	Milligan, Wm. B.	Hides, tanning and tanning	Nov. 4, 1851	XVI.	
8,314	Milligan, Wm. E.	Boilers, steam, management of the flues and water-spaces of	July 15, 1851	VI.	
8,315	Moulton, Charles	Blasting rocks	Apr. 1, 1851	IX.	
8,316	Mousson, Henry	Hubs for the reception of boxes	July 29, 1851	X.	
8,317	Moore, Jos. H., and Wm. P. Parrott	Carriage, steam, for railings	Dec. 2, 1851	X.	
8,318	Moore, William	Presses, self-acting	Sept. 30, 1851	XII.	
8,319	Mortimer, Thomas H., and James M. Gardner	Rudders, method of operating	Nov. 25, 1851	VII.	
8,320	Morrill, John	Photographic purposes, mercury bath for	Sept. 2, 1851	XVIII.	
8,321	Morrill, James H.	Locomotives, running gear of	Oct. 7, 1851	X.	
8,322	Murphy, William	Car, railroad, running gear of	Oct. 21, 1851	X.	
8,323	Neblinger, William	Harvesters, grass	Jan. 7, 1851	I.	
8,324	Neely, Edward	Electro-magnetic engines	Oct. 14, 1851	III.	
8,325	Neff, Jacob	Shawls, &c., machine for twisting fringes of	May 27, 1851	XII.	
8,326	Nesmith, John, and Wesley Sawyer	Jacks, lifting	Nov. 11, 1851	XVII.	
8,327	Newbury, Bolivar	Bedsteads	June 10, 1851	II.	
8,328	Newcomb, Levi, jr.	Locks, permutation safety	Oct. 14, 1851	XIII.	
8,329	Newell, Robert	Locks, permutation safety	May 6, 1851	XI.	
8,330	Newlove, William	Mills, grinding	Oct. 21, 1851	XVIII.	
8,331	Newman, Nelson	Pumps	Nov. 25, 1851	II.	
8,332	Newton, Henry J.	Piano-forte strings	Sept. 30, 1851	XIV.	
8,333	Newton, Orrin	Door-knobs, manufacture of	Aug. 26, 1851	II.	
8,334	Nicholson, Thomas	Lock maze	Dec. 2, 1851	VIII.	
8,335	Niles, Peter H.	Tool fast, adjustable	Nov. 18, 1851	III.	
8,336	Nims, Samuel D.	Sashes, window, method of hanging	Mar. 23, 1851	II.	
8,337	Noel, Theodore	Watches, winding	Mar. 4, 1851	VI.	
8,338	Norris, J. H., and D. Flanders	Decks	June 10, 1851	XVII.	
8,339	Northrop, Sheldon	Looms for weaving seamless bags	Sept. 23, 1851	XVII.	
8,340	Northrop, Michael	Calculating machines	Feb. 1, 1851	XI.	
8,341	Nystrom, John W.	Boilers, method of bracing the water spaces of	June 3, 1851	II.	
8,342	O'Neil, Bernard	Churns	May 20, 1851	XI.	
8,343	O'Neil, John	Washing machines	Aug. 26, 1851	I.	
8,344	O'Neil, John	Easy chairs for invalids	Aug. 26, 1851	VIII.	
8,345	Osborn, John	Hydraulic rams, operating the waste gate in	July 1, 1851	VIII.	
8,346	Osborn, Joseph	Sack stopper	Apr. 8, 1851	V.	
8,347	Osgood, James W.	Coupling compound for hose or pipe	July 15, 1851	XVI.	
8,348	Ostrander, John F., assignor to A. B. and E. E. Hutchinson	Harrow, rotary	Jan. 21, 1851	I.	
8,349	Otis, George W.	Lighting rods, insulators for	Oct. 14, 1851	XI.	
8,350	Pace, Henry, sen	Bedsteads	Sept. 30, 1851	XVIII.	
8,351	Palme, John P.	Spectacle frames	July 1, 1851	VIII.	
8,352	Palme, Rufus R.	Stoves, cooking	Apr. 8, 1851	V.	
8,353	Panton, William	Leather machines for splitting	July 15, 1851	XVI.	
8,354	Parker, E. T.	Plough stock, convertible	Jan. 21, 1851	I.	
8,355	Parker, James L.	Water wheels	Oct. 14, 1851	XI.	
8,356	Parsons, Lemuel H.	Plotting scales	Sept. 30, 1851	XVIII.	

*List of persons whose patents for inventions have expired, &c.—Continued.*

No.	Patentee.	Invention or discovery.	Date.	Class.
8,128	Past, John C.	Switch for railroads, self-adjusting and locking	June 3, 1881	X.
8,252	Pattison, H. L.	Pignons, manufacture of	Aug. 12, 1881	IV.
8,612	Pattison, James M., and Wm. F. Fergers, assignors to John C. Datocta.	Planing machines, cutters for	Dec. 23, 1881	XIV.
8,471	Pease, Webster H.	Kettles with spouts, method of moulding	Oct. 28, 1881	II.
8,548	Peck, Milo	Presses, drop	Nov. 25, 1881	(Extended)
7,880	Pennison, Cunningham M.	Bridge-trusses, arrangement of arches in	Jan. 7, 1881	IX.
7,830	Pennock, Samuel, and Morton.	Planter's seed, seeding apparatus of a	Feb. 11, 1881	I.
7,945	Pepper, John, assignor to Charles Warren and Horatio G. Sumford.	Knitting machines	Feb. 22, 1881	III.
8,172	Pepper, John, assignor to Horatio Crane, John Pepper, and J. G. Crane.	Knitting machines	June 24, 1881	III.
8,582	Pepper, John Paige	Jasper, mineral composition resembling	Dec. 16, 1881	XVIII.
8,506	Perry, George W.	Looms, shuttle, motion of	Nov. 11, 1881	III.
8,304	Perron, Ira B., and Joel L. Brockel.	Omnibus drivers, registers for	Aug. 19, 1881	X.
98	Planner, Frederick	Dyestuffs from spent madder, preparation of	(Additional Improvement)	
8,331	Phelps, James.	Paper rags, machines for cleaning	(Réserve)	
8,549	Phillips, David F.	Switch, railroad	Nov. 18, 1881	X.
8,104	Phillips, Samuel.	Mills, cider	Nov. 25, 1881	XII.
8,097	Pierre, Samuel.	Furnaces, hot-air	Nov. 25, 1881	V.
7,948	Platt, Nelson	Smut machines	May 20, 1881	XIII.
8,210	Pond, Moses.	Ranges, cooking	May 20, 1881	V.
8,382	Porter, F. W.	Fire-arms, revolving breech	July 6, 1881	XIX.
7,940	Porter, Samuel.	Ores, mineral, &c., arrangement of pans for washing	Dec. 9, 1881	II.
8,171	Postley, Charles A.	Doors or shutters, arrangement for opening or closing	Feb. 16, 1881	II.
7,970	Potter, Nathaniel	Prog-guard, self-acting	June 24, 1881	IX.
8,639	Pratt, Ulysses	Beehives, use of slides in	Mar. 11, 1881	I.
8,405	Pratt, D. and R.	Ivory, process of bleaching	July 6, 1881	IV.
8,359	Prince, N. A.	Flocks to cloth, apparatus for applying	Oct. 7, 1881	III.
8,113	Putnam, George W.	Pens, fountain	Sept. 30, 1881	XVIII.
8,403	Putnam, Joseph	Saw-filing machinery, vice-jaw for	May 27, 1881	XIV.
8,186	Race, W.	Sash, upper, arrangement of catches in the, operated by moving the lower sash.	Sept. 30, 1881	XV.
8,387	Race, Washbourn.	Fasteners, blind or shutters	July 1, 1881	II.
8,357	Raines, William N.	Switches, railroad	Sept. 22, 1881	II.
8,532	Radick, William	Seed planters	Dec. 2, 1881	I.
8,086	Ramos, Juan	Sugar, processes for the manufacture of	Nov. 18, 1881	IV.
8,067	Ramos, Juan	Sugar, apparatus for boiling	Apr. 29, 1881	IV.
8,453	Remy, Benjamin W.	Excavating machines	Apr. 29, 1881	IX.
8,613	Renton, James	Iron wrought direct from the ore, apparatus for making	Oct. 21, 1881	II.
184	Reynolds, Edward.	Felloes for the wheels of carriages and wagons, machine for setting or bending.	Dec. 23, 1881	(Réserve)
8,051	Reynolds, James	Gutta, percha tubing and covering wire, machines for	Apr. 22, 1881	IV.
7,341	Rhoades, Philip, Jr.	Snatch-block	Feb. 18, 1881	VII.

8,476	Bier, F.	Baby linquers	Oct. 24, 1851	XV.
8,484	Rich. Martin	Saw-mills	May 13, 1851	XV.
8,485	Richardson, Aaron	Oil-cups for journal boxes	July 13, 1851	XIII.
8,491	Richards, William T.	Spring, machinery for forming joints of elliptical	July 20, 1851	XL
8,493	Richardson, A.	Leather and splitting machines	Aug. 26, 1851	XL
8,495	Richardson, Abiel S.	Currs	Sept. 16, 1851	XL
8,496	Richard, David H., and Joseph F. Flanders	Locks, rotating tumbler	June 10, 1851	XL
8,517	Rickey, Richard	Collars, horse	Dec. 16, 1851	XL
8,521	Riddle, John J.	Brick machines	Nov. 11, 1851	XV.
8,523	Riddle, John J.	Brick presses	July 22, 1851	XV.
8,535	Riley, Extra	Teeth, porcelain, inserting	Nov. 18, 1851	XX.
8,593	Ripley, E., and E. L. Brundage	Grinder, for doors, shutters, &c.	Apr. 1, 1851	XX.
8,595	Ripley, E., and E. L. Brundage	Grinder, method of forming teeth upon cast-iron.	May 12, 1851	XX.
8,596	Robbins, John W.	Car seats	Aug. 12, 1851	XIII.
8,597	Robbins, John W.	Saw-mills, setting logs in	Dec. 9, 1851	X.
8,598	Robbins, John W.	Iron and steel, machines for splitting	Apr. 15, 1851	XIV.
8,599	Robbins, John W.	Paint oil from rosin	June 24, 1851	XXII.
8,600	Robbins, John W.	Acid and naphtha from rosin, distilling	Nov. 4, 1851	IX.
8,601	Robbins, L. S.	Oil from rosin, lubricating	Nov. 4, 1851	IX.
8,602	Robbins, L. S.	Oil from rosin, tanners'	Nov. 4, 1851	IX.
8,603	Robbins, L. S.	Telegraph wire, insulators for	Oct. 14, 1851	IX.
8,604	Robbins, L. S.	Grain, threshing and separating	Oct. 28, 1851	IX.
8,605	Roberts, Cyrus, and John Cox	Lead machines, sheet, combination of dies for	May 27, 1851	IX.
8,606	Robertson, John	Candle-sticks	Dec. 16, 1851	IX.
8,607	Rockwell, Francis A.	Last blocks, fastenings for	Sept. 16, 1851	IX.
8,608	Rockwood, Levi R., assignor to Joseph L. Woodward	Stoves	Nov. 18, 1851	IX.
8,609	Rose, Hale R.	Planters, seed	Jan. 1, 1851	IX.
8,610	Rose, James P.	Shutters, for shop fronts	Aug. 5, 1851	IX.
8,611	Root, James	Shutters, folding doors of	Nov. 4, 1851	IX.
8,612	Rowe, Bradford	Leather, machines for stretching	Apr. 22, 1851	IX.
8,613	Rudd, John	Piano-forte action	Mar. 7, 1851	IX.
8,614	Ruggles, H. J.	Designs in sheet metal, apparatus for punching	July 8, 1851	IX.
8,615	Ruggles, Stephen P.	Grates, stove	Nov. 18, 1851	IX.
8,616	Ruggles, Stephen P.	Printing presses	Jan. 1, 1851	IX.
8,617	Russell, Charles W.	Stamps, hand	Sept. 23, 1851	IX.
8,618	Russell, Charles W.	Chimney caps	Dec. 16, 1851	IX.
8,619	Russell, Ira	Bedsteads	Sept. 16, 1851	IX.
8,620	Russell, Jonathan	Irregular forms, machines for turning	Jan. 1, 1851	IX.
8,621	Ruttan, Henry	Furnaces, ventilating	May 20, 1851	IX.
8,622	Sabin, H. W., and George Drew	Hinges, spring	Feb. 25, 1851	IX.
8,623	Sabin, Harvey W.	Bedsteads	July 1, 1851	IX.
8,624	Salomon, John C. Fr.	Saddles	Oct. 21, 1851	IX.
8,625	Salomon, John C. Fr.	Spring saddles	Nov. 18, 1851	IX.
8,626	Salomon, John C. Fr.	Propelling and steering, apparatus for	Dec. 2, 1851	IX.
8,627	Salomon, John C. Fr.	Engines, carbonic acid gas	Dec. 9, 1851	IX.
8,628	Saugster, Hugh and James	Lamps, street, reflectors for	Jan. 14, 1851	IX.
8,629	Saugster, Hugh and James	Lanterns	June 10, 1851	IX.
8,630	Sargent, Charles G., and Robert Thompson	Waste-pickers	Sept. 16, 1851	IX.
8,631	Sawyer, Sylvanus	Retans, machinery for cutting, &c.	June 24, 1851	IX.
8,632	Sawyer, Sylvanus	Sofa bedsteads	Jan. 21, 1851	IX.
8,633	Schmitt, Russell	Brick presses	Feb. 11, 1851	IX.
8,634	Schmitt, Jacob	Scrapers	Feb. 11, 1851	IX.

*List of persons whose patents for inventions have expired, &c.—Continued.*

No.	Patentee.	Invention or discovery.	Date.	Class.
8, 079	Schroder, Richard E.	Kilns, lime	May 6, 1851	XV.
7, 990	Scott, John, and John Tannabill	Jacquard machines	Mar. 18, 1851	III.
8, 411	Scott, William	Boilers, revolving	Oct. 7, 1851	VI.
8, 176	Seigrath, Jacob	Compositions, lubricating	June 24, 1851	IV.
187	Serrell, Alfred T.	Mouldings, machinery for making	(Release)	
8, 455	Sevenson, Benjamin	Wheels, cast-iron car	Oct. 21, 1851	X.
8, 378	Sexton, Amos J., and William Ennis	Ships, ventilating	Sept. 22, 1851	VII.
8, 338	Seymour, E. L.	Ores, processes of reducing by zinc compound	Aug. 26, 1851	II.
8, 312	Seymour, William H.	Harvesting machines, rakes to	July 8, 1851	I.
8, 349	Shaler, Reuben	Dyeing door-mats	July 22, 1851	IV.
8, 430	Sheets, Edmund	Water-wheels, overshoot	Oct. 14, 1851	XI.
8, 301	Sherwood, John P., assignor to Calvin Adams.	Door locks	(Release)	
8, 326	Sherwood, John P.	Cut-nail machines	Aug. 26, 1851	II.
8, 362	Sherrod, Walter	Mandrels, expanding	Dec. 2, 1851	XIV.
7, 691	Shields, James, and Samuel Pierce	Stoves, cast	Jan. 7, 1851	V.
8, 259	Short, Kewall	Window-sashes	July 29, 1851	IX.
8, 614	Shull, Thomas E.	Tenpins, method of setting up	Dec. 23, 1851	XXII.
7, 893	Simpson, Andrew L.	Ox-yokes	Jan. 7, 1851	I.
7, 892	Simpson, Samuel R.	Vise, parallel	Jan. 7, 1851	II.
8, 594	Singer, Isaac M.	Sewing machines	Aug. 12, 1851	III.
8, 530	Skinner, Franklin	Shingle machines	Nov. 25, 1851	XIV.
8, 596	Skinner, Henry	Churns	Dec. 16, 1851	I.
8, 431	Slight, Thomas	Padlock	Oct. 14, 1851	II.
7, 954	Sloan, Thomas J.	Screw-blanks, machine for arranging and feeding	Feb. 25, 1851	II.
8, 027	Sloan, Thomas J.	Tenpins, apparatus for setting up	Apr. 8, 1851	XXII.
8, 062	Sloan, Thomas J.	Screw-blanks, &c., machine for assorting	May 6, 1851	II.
8, 155	Sloan, Thomas J.	Screws, method of finishing the heads of	June 10, 1851	II.
8, 379	Sloan, Thomas J.	Screws, machinery for threading wood, and feeding apparatus therefor	Sept. 23, 1851	II.
8, 397	Sloan, Thomas J.	Screw-blanks and articles of a similar character, machine for arranging	Sept. 30, 1851	II.
8, 456	Sloan, Thomas J.	Screws, machinery for shaving, picking, and rehaving wood	Oct. 31, 1851	II.
8, 613	Smith, Edward N., assignor through others to American Paper Folding Company.	Screws and pins, machines for counting	Dec. 23, 1851	(Extended)
186		Paper-folding machines	(Release)	
7, 914	Smith, Ethel	Stoves	Jan. 28, 1851	V.
8, 317	Smith, Horace, assignor to Courland Palmer	Fire-arms, breech-loading	Aug. 27, 1851	XIX.
8, 066	Smith, Ira H., assignor to Lemuel D. Smith	Matches, machinery for making	Apr. 23, 1851	XVI.
8, 064	Smith, Joseph C.	Saddles, springs	Apr. 23, 1851	XVI.
7, 947	Smith, Marion	Musical instruments, bellows for	Feb. 23, 1851	XVII.
8, 531	Smith, William M.	Engines, valve for oscillating	Nov. 28, 1851	XXII.
8, 552	Snave, Harvey, and Luther T. Smart	Fly-traps	July 1, 1851	IV.
7, 953	Snow, Henry H.	Apparatus, droppers	May 4, 1851	V.
7, 953	Snow, Henry H.	Stools, method of making	Feb. 23, 1851	V.
8, 343	Southered, Eli F.	Stools, method of making	Sept. 9, 1851	VII.

7,049	Munthworth, Daniel H.	Feb. 19, 1851	XIV.
8,401	Apner, Matthew	Sept. 30, 1851	XIV.
7,948	Speers, N. W.	Mar. 12, 1851	II.
8,507	Speers, Nath W.	Mar. 12, 1851	II.
8,730	Spencer, James O.	May 27, 1851	X.
8,729	Spicer, Charles F.	May 27, 1851	X.
8,743	Spoor, D.	Aug. 1, 1851	II.
8,537	Stanley, Edwin	Sept. 3, 1851	V.
8,303	Stanley, Harwell	Sept. 3, 1851	IX.
8,616	Starks, Nathan	Aug. 19, 1851	XVI.
7,911	Starr, Charles	Dec. 23, 1851	II.
8,179	Starr, Charles	Jan. 21, 1851	XVIII.
8,537	Starr, Vine B.	June 24, 1851	XVIII.
8,189	Starr, William H.	Nov. 18, 1851	XVII.
8,053	Stearns, Charles W.	June 24, 1851	I.
8,237	Stearns, Charles W.	Apr. 22, 1851	XVI.
8,213	Stearns, John	July 22, 1851	XL
8,228	Stebbins, Ernestus	July 8, 1851	XXI.
8,507	Steger, Joseph, assignor to William Mitchell	July 15, 1851	XL
8,474	Stephan, Jacob, assignor to P. Augustus Sewarze and Jacob Stephan.	Nov. 11, 1851	XVI.
8,539	Stevens, Francis A.	Oct. 28, 1851	IV.
8,004	Stevens, Francis B.	Nov. 25, 1851	VI.
7,999	Stevens, Richard F.	Mar. 22, 1851	XL
8,472	Stevens, Joel, and H. J. Ruggles.	Mar. 22, 1851	V.
8,412	Stevens, Joshua, assignor to Massachusetts Arms Company.	Oct. 28, 1851	XIX.
7,915	Still, Francis N.	Oct. 7, 1851	II.
205	Stillman, Paul.	Jan. 28, 1851	X.
8,030	Stillwell, Rickason, and Edwin L. Brundage.	Apr. 22, 1851	X.
8,030	Stillwell, Lewis E.	Dec. 2, 1851	VII.
8,508	St. John, John R., assignor to James Renwick, George T. Barnard, and E. B. St. John, trustees of the St. John's Compass and Log Company.	May 6, 1851	X.
8,074	St. John, John R., assignor to James Renwick, George T. Barnard, and E. B. St. John, trustees of the St. John's Compass and Log Company.	May 13, 1851	VII.
8,085	St. John, John R., assignor to James Renwick, George T. Barnard, and E. B. St. John, trustees of the St. John's Compass and Log Company.	May 13, 1851	VII.
8,214	St. John, James.	July 8, 1851	XL
8,413	St. John, L. C.	Oct. 7, 1851	IV.
9,007	St. Johns, John R.	June 6, 1851	VI.
7,992	Storm, William Mt.	Feb. 4, 1851	VI.
8,992	Storm, William Mt.	Apr. 28, 1851	VII.
8,380	Storm, William Mt.	Sept. 23, 1851	VII.
8,473	Stout, Thomas B., and James F. Morell.	Oct. 28, 1851	XXII.
8,518	Stover, J. S.	Nov. 11, 1851	VI.
8,032	Strait, Hiram	Apr. 6, 1851	XIV.
8,233	Strait, J. V.	July 22, 1851	XXII.
7,943	Straub, Isaac	Feb. 18, 1851	XIV.
8,064	Strevel, William, and Daniel Brown.	Apr. 22, 1851	XVI.
8,589	Strode, Thomas T.	Dec. 2, 1851	XIV.
8,349	Sturgis, John J., assignor to H. H. Green.	Sept. 9, 1851	XVIII.
Plating machines.			
Mills-bases.			
Machines, &c., apparatus for moving and securing.			
Carriages, &c., operating.			
Gold process for dissolving.			
Grate-bars, agitating.			
Boat-carpentry.			
Boat-bonding machines.			
Embossing backs of books, tools for.			
Books, machines for finishing backs of.			
Gauges.			
Harvesters, grain.			
Clags, or patterns.			
Faucets.			
Hats, machine for pressing.			
Faucets, or gates, molasses.			
Boots and shoes, machines for cutting soles of.			
Cements, for grinding, cylinders.			
Car-brakes, railroad.			
Valves, balanced.			
Liquids, apparatus for drawing and measuring.			
Stoves, dairy.			
Pistols, revolving breech.			
Patterns, mires, or second, for casting.			
Gauges, steam and vacuum.			
Car seats.			
Carriage perches.			
Hand-logs.			
Velocimeters, aquatic, method of supporting the vanes of.			
Jacks, lifting.			
Dwelling, apparatus for warming air and water for.			
Scrap boilers.			
Power, motive, method of obtaining.			
Vessels, flexible hose, or float, for supporting.			
Engines, in which compressed air or other gas heated and expanded by admixture therewith of a heated fluid is used as the motive agent.			
Yogas and nays, machines for taking.			
Kilns, grain.			
Saw-set.			
Motion, mode of changing reciprocating into rotary.			
Saw-mills.			
Leather, machines for stretching.			
Boring holes in posts.			
Type-casting machines.			

## List of persons whose patents for inventions have expired, &amp;c.—Continued.

No.	Patentee.	Invention or discovery.	Date.	Class.
8,084	Sullivan, Jonathan.	Straw cutters.	May 13, 1851.	I.
7,991	Surles, A. J.	Beehives, construction of.	Mar. 12, 1851.	I.
8,328	Sweet, James H.	Spike mangle.	Mar. 26, 1851.	II.
8,494	Swiney, Edward.	Dyeing blue, processes for.	Aug. 4, 1851.	IV.
8,457	Taft, George C.	Box opener.	Nov. 4, 1851.	XXII.

1,694	Thompson, Henry G., assignor to Hartford Carpet Co.	Pattern, carpet.	

*List of persons whose patents for designs have expired during the year 1865—Continued.*

No.	Patentee.	Design.	Date.
983	Vedder, N. S. and W. S. Sanderson, assignors to L. Potter & Co.	Stove.	Jan. 12, 1858.
1, 065	Vose, Samuel D.	Stove plates.	Nov. 23, 1858.
1, 066	Vose, Samuel D.	Stove plates.	Nov. 23, 1858.
1, 067	Vose, Samuel D.	Stove plates.	Nov. 23, 1858.
1, 068	Vose, Samuel D.	Stove plates.	Nov. 23, 1858.
1, 069	Vose, Samuel D.	Stove plates.	Nov. 23, 1858.
1, 070	Vose, Samuel D.	Stove plates.	Nov. 23, 1858.
1, 071	Waterman, N.	Stand, towel.	May 25, 1858.
1, 072	Waterman, N.	Stand, towel.	Aug. 3, 1858.
1, 073	Waterman, N.	Roll pans.	Aug. 17, 1858.
1, 074	Waterman, N.	Pans, bread.	Aug. 31, 1858.
1, 999	Wheeler, R., and S. A. Bailey	Stoves, cooks.	May 4, 1858.
1, 012	Wilcox, J.	Sewing-machine stand.	June 1, 1858.
1, 478	Winger, W. P.	School desk.	Oct. 8, 1861.
1, 002	Wood, T. H., J. E. Roberts, and H. B. Hubbell.	Stove, cooks.	May 11, 1858.

ALPHABETICAL LIST OF PATENTEES OF INVENTIONS, DESIGNS, AND REISSUES FOR THE YEAR 1865.

No.	Patentee.	Residence.	Invention or discovery.	Date.
8, 134	Abbe, H. H.	Chatham, Conn.	Ball door.	Dec. 26, 1865.
46, 637	Abbe, Horatio H., and Wm. H. Nichols. (See Nichols & Abbe.)	Chatham, Conn.	Ball or grong, door.	July 11, 1865.
51, 675	Abbott, James R., assignor to Joel D. Champion	Midway Ind.	Level, square, compass, and plumb staff, combined.	Dec. 26, 1865.
46, 174	Abbott, Thomas H. (See Taber, Wing H., assignor.)	Salem, N. H.	Lease, shoe.	Jan. 31, 1865.
46, 603	Abbott, Warren N., assignor to self and Dwight B. Rich.	Boston Mass.	Pipe couplings.	Feb. 28, 1865.
50, 763	Aberdell, John	New York, N. Y.	Projectile, banding and covering.	Nov. 7, 1865.
49, 843	Aclair, F. A.	France	Electro-magnetic regulators.	Sept. 5, 1865.
45, 905	Adair, James	Pittsburg, Pa.	Lamps.	Jan. 10, 1865.
48, 638	Adams, Charles S.	Hilldale, Mich.	Foot rest.	July 11, 1865.
46, 901	Adams, Edgar B., R. P. Trimble, and H. N. Adams	Salem, Ohio	Engines, rotary.	Feb. 7, 1865.
50, 784	Adams, Henry B.	Brooklyn, N. Y.	Building with wood, siding and covering.	Nov. 7, 1865.
49, 489	Adams, Henry J.	Leavenworth, Kansas.	Window cords, mode of attaching each to	Aug. 22, 1865.
50, 998	Adams, Henry W.	Irrington, N. J.	Tanning.	Nov. 21, 1865.
51, 774	{ Adams, Henry W., and W. S. Worthington	{ New York, N. Y. Newtown, N. Y.	Amalgamating and collecting gold and silver.	July 18, 1865.
47, 608	Adams, Jewett & Co. (See Burrige, W. H., assignor.)	Birmingham, Iowa.	Planter, corn.	May 9, 1865.
51, 408	Adams, J. N.	Whitney's Point, N. Y.	Butter workers.	Dec. 12, 1865.
49, 081	Adams, J. P.	Kokomo, Ind.	Shoe fastenings.	Aug. 1, 1865.
49, 946	Adams, John, assignor to self, A. B. Walker, A. J. Hobbs, and Wm. Russell.	Kokomo, Ind.	Boots and shoes, lining for.	Sept. 12, 1865.
45, 906	Adams, John B., and Daniel L. Gold. (See Gold & Adams.)	Taunton, Mass.	Grenades, hand, igniting.	Jan. 10, 1865.
48, 010	Adams, John S., assignor to self and Wm. C. Dodge.	Taunton, Mass.	Carriages around bullets, implement for compressing.	May 30, 1865.
49, 480	Adams, Joseph.	Jonesville, W. Va.	Washing machine.	Aug. 22, 1865.
49, 680	Adams, Nathan.	Altoona, Pa.	Sulkes, machine for drawing.	Sept. 5, 1865.
46, 765	Adams, Wm. P., and Henry A.	Norwich, Conn.	Stoves, radiator for.	Mar. 14, 1865.
51, 774	Adams, Robert A., assignor to self and Edwin Lee Brown.	Chicago, Ill.	Graining wood, apparatus for. (Antedated December 13, 1865.)	Dec. 26, 1865.
46, 061	Adams, William.	Philadelphia, Pa.	Leather, mode of economizing the manufacture of articles of. (Antedated December 29, 1864.)	Jan. 31, 1865.
46, 317	Adams, William	Philadelphia, Pa.	Disinfecting noxious vapors, process for.	Feb. 14, 1865.
46, 318	Adams, William	Philadelphia, Pa.	Official, method of treating.	Feb. 14, 1865.
47, 264	Adams, Wm., assignor to J. P. E. P. and D. Baugh.	Philadelphia, Pa.	Attending and kneading substances, apparatus for.	Apr. 18, 1865.
48, 156	Arta, Jean F. A., and Paul F., assignors to Jean F. A. Arta.	Belgium	Official, method of treating.	Nov. 28, 1865.
51, 276	Aruey, John.	Belgium	Lubricator.	Jan. 31, 1865.
51, 676	Artificial Iron Works. (See Neer, Charles, assignor.)	Bath, Pa.	Lubricating apparatus. (Patented in Belgium Sept. 5, 1864.)	Nov. 28, 1865.
45, 902	Ahl, David.	Newville, Pa.	Boring fence posts, machines for.	Dec. 16, 1865.
46, 749	Allen, John, assignor to Erasmus Wilkins.	Warner, N. H.	Barrels, oil, from leaking, method of preventing.	Jan. 17, 1865.
49, 946	Akins, W. H., and J. D. Felthousen.	Dryden, N. Y.	Carroll.	Mar. 7, 1865.
		Michigan City, Ind.	Sewing machines. (Extension.)	July 29, 1865.

## List of patentees of inventions, designs, and reissues, 1865—Continued.

No.	Patentee.	Residence.	Invention or discovery.	Date.
1, 930	Alina, W. H., and J. D. Felthousen, assignors through mesne assignments to K. G. Fairbanks.	New York, N. Y.	Sewing machines.	Apr. 11, 1865.
50, 320	Abertson, Jas. M.	New London, Conn.	Valves, cut-off. (Antedated September 27, 1865.)	Oct. 10, 1865.
48, 222	{ Albright, Daniel K., and L. H. De Lange.	{ Philadelphia, Pa. Bordentown, N. J.	Hat.	June 13, 1865.
2, 177	{ Albright, Daniel K., and L. H. De Lange.	{ Philadelphia, Pa. Bordentown, N. J.	Hat. (Design).	Oct. 10, 1865.
2, 178	{ Albright, Daniel K., and L. H. De Lange.	{ Philadelphia, Pa. Bordentown, N. J.	Hat. (Design).	Oct. 10, 1865.
50, 999	{ Albright, Daniel K., and L. H. De Lange.	{ Philadelphia, Pa. Bordentown, N. J.	Hat, device for ventilating.	Nov. 21, 1865.
46, 435	Aldrich, Hubley	Lewistown, Pa.	Races, horse	Feb. 21, 1865.
47, 781	Alden, Albert	New York, N. Y.	Brush.	May 23, 1865.
2, 063	Alden, Augustus E.	Providence, R. I.	Photographic card.	June 13, 1865.
46, 616	Alden, Henry A. (See Molth, A. Theodore, assignor.)	East Toledo, Ohio	Trees from injury while ploughing, protecting.	Mar. 7, 1865.
46, 302	Aldrich, David C.	Anamosa, Iowa	Churns	Feb. 7, 1865.
47, 911	Aldrich, Hosea F., assignor to self and George Jenks	Spencer, Mass.	Sewing machines, waxed-thread.	May 30, 1865.
47, 912	Aldrich, Hosea F., assignor to self and George Jenks	Spencer, Mass.	Sewing machines, thread-waxing device for.	May 30, 1865.
49, 464	Alexander, Abram	Pittsburg, Pa.	Bolt machine.	Aug. 15, 1865.
50, 671	Alexander, Benjamin F.	Philadelphia, Pa.	Beetle, pressing, paring apples, and sharpening knives, machine for.	Oct. 31, 1865.
51, 000	Alexander, John H., and David R. (See Groom, John, assignor.)	Coleman, Mass.	Washing dishes, machine for.	Nov. 21, 1865.
50, 785	Alexander, Levi A.	Westerville, Ohio	Wagon, spring seat for.	Nov. 7, 1865.
	Alexander, Thomas J. (See Groom, John, assignor.)			
	Alexander, Wm., and W. J. Van Horn. (See Van Horn and Alexander, Wm. H. & Co. (See Jay, James M., assignor.)			
47, 265	Alexander, W. H. & Co. (See Jay, James M., assignor.)	Bangor, Maine.	Crutches.	Apr. 18, 1865.
51, 677	Alamby, Geo. T., and John G. Eugene	Bangor, Maine.	Crutches	Dec. 20, 1865.
	Allen, Geo. T., and John G. Eugene			
	Allen, Chas. T. (See Trimble, Charles B., assignor.)			
48, 883	Allen, D. D.	South Adams, Mass.	Valves	July 25, 1865.

51, 410	Ayer, James B.	Malden, Mass.	Fastener, lock key.	Dec. 12, 1865.
46, 619	Ayer, James C.	Lowell, Mass.	Ores, process for desulphurizing and dinitrifying. (Antedated January 24, 1865.)	Mar. 7, 1865.
46, 620	Ayer, James C.	Lowell, Mass.	Ores, process for desulphurizing and dinitrifying. (Antedated January 24, 1865.)	Mar. 7, 1865.
46, 621	Ayer, James C.	Lowell, Mass.	Ores, process for desulphurizing, desulphurizing, and oxidizing. (Antedated January 24, 1865.)	Mar. 7, 1865.
46, 623	Ayling, Henry A. (See Connor, John, assignor.)	Dalton, Wis.	Separator, grain.	June 13, 1865.
48, 146	Ayres, S. K., assignor to self and B. A. Wildor.	Cape Elizabeth, Maine.	Caster for furniture.	June 13, 1865.
50, 547	Babb, Marshall L.	Cape Elizabeth, Maine.	Rowlock.	Oct. 24, 1865.
51, 538	Babb, Marshall L.	Auburn, N. Y.	Bolt-securing machine.	Dec. 19, 1865.
46, 622	Babbitt, Avery.	Kokomo, Ind.	Boots, gaffer.	Mar. 7, 1865.
46, 623	Babbitt, Samuel.	New York, N. Y.	Thread and needle boxes.	Mar. 21, 1865.
45, 866	Babcock, Hannin.	Ionia, Mich.	Plaster and seed sower and roller combined.	Jan. 3, 1865.
	Babcock, Henry S., and Stillman H. Jenks.			
	Babcock, N., and C. B. Cottrell. (See Stillman, C. A., assignor.)			
	Babcock, Sylvester P. (See Kilbourn, Hiram, assignor.)			
	Bach, Simon & Co. (See Keck, Rudolph, assignor.)			

6,123	Bachelder, John	Norwich, Conn	Mowing machines	(Release)	Dec. 12, 1865.
20,180	Bacon, Frank M.	Ripon, Wis.	Planters, cotton seed		Sept. 26, 1865.
48,477	Bacon, F. M., and Joseph Fowler. (See Fowler & Bacon.)	New York, N. Y.	Vegetable washer		June 27, 1865.
50,529	Bacon, F. W., assignor to the New York Descenting Company.	Medina, Wis.	Harvester rake		Oct. 17, 1865.
* 51,127	Bacon, Jerome, assignor to self and John F. Schaeffer.	Medina, Wis.	Broom		Nov. 29, 1865.
49,685	Bacon, Nelson. (See Lewis, James, assignor.)	France	Friction, mode of diminishing		Aug. 29, 1865.
50,438	Bacon, Stephen T. (See Doughty, John, assignor.)	Orleansburg, N. Y.	Drills, grain, and cultivator combined		Oct. 17, 1865.
47,508	Bachelder, Charles E., and W. M. McDowell. (See McDowell & Bachelder.)	New York, N. Y.	Gas, apparatus for generating		Oct. 24, 1865.
47,509	Bagot, Joseph	Waltham, Mass.	Chairs, sick		May 9, 1865.
49,843	Bagley, Charles H.	East Gloucester, Mass.	Fluid, writing		Sept. 5, 1865.
47,969	Baldwin, Henry C.	Amesbury, Mass.	Hats, felt, printed, making		Apr. 18, 1865.
2,210	Bailey, Alford	Middle Haddam, Conn.	Cotton handle	(Design)	Oct. 31, 1865.
47,891	Bailey, A. J., and J. Power. (See Power & Bailey.) Release.	New York, N. Y.	Curtain fixtures		May 22, 1865.
47,890	Bailey, Jacob E., assignor to Samuel E. Bailey.	East Troy, Wis.	Hook, snap		May 16, 1865.
48,253	Bailey, Jonathan	Cleveland, Ohio	Stoves, coal		June 20, 1865.
51,081	Bailey, Robert	Cleveland, Ohio	Stoves, coal		Dec. 26, 1865.
2,087	Bailey, Robert M.	Boston, Mass.	Skirt border	(Design)	June 13, 1865.
51,411	Bailey, S. A., et al. (See Allender, John, assignor.) Release.	Nashville, Tenn.	Clocks, public, illuminating		Dec. 12, 1865.
48,503	Bailey, Stephen G., and Russell Wheeler. (See Wheeler & Bailey.) Design.	Wassail, N. Y.	Buckle		July 4, 1865.
48,504	Bailey, Thomas Ives	Troy, N. Y.	Hydrants		July 4, 1865.
2,084	Bailey, Truman G.	Philadelphia, Pa.	Lincoln, Abraham, statuette of	(Design)	June 13, 1865.
49,691	Bailey, J. A.	Brooklyn, N. Y.	Paper, sheets of, machinery for plating or finishing		Sept. 5, 1865.
51,527	Bainbridge, Charles T.	England	Dies for making railroad crossing joints		Dec. 12, 1865.
47,377	Baird, Hugh	New York, N. Y.	Engines, steam		Apr. 25, 1865.
48,355	Bald, John	Wheeling, West Va.	Furnace for boiling iron		June 27, 1865.
2,059	Baker, Christopher D.	Hartford, Conn.	Broom	(Release)	Aug. 29, 1865.
51,539	Baker, C. W., et al. (See Deltour, William, assignor.)	Rollersville, Ohio	Dough roller		Dec. 19, 1865.
49,065	Baker, D. B.	Pittsburg, Pa.	Well, oil, drills		Aug. 1, 1865.
50,765	Baker, Elias	South Reading, Mass.	Stove, cooking		Oct. 31, 1865.
50,322	Baker, F. M., assignor to Charles Jordan	Brooklyn, N. Y.	Dough, machine for kneading		Oct. 10, 1865.
46,983	Baker, George E.	New York, N. Y.	Ores, treating		Mar. 28, 1865.
46,984	Baker, G. W.	New York, N. Y.	Ores, treating and demulphurizing		Mar. 28, 1865.
45,956	Baker, Halley H.	New Market, N. J.	Fire bank		Jan. 17, 1865.
48,889	Baker, James R.	Kendallville, Ind.	Window sash, device for operating		July 25, 1865.
46,843	Baker, John G., ass'r, through mesne assignments, to Henry Diston.	Philadelphia, Pa.	Saw grinding machine		Mar. 14, 1865.
51,283	Baker, Loring J.	East Machias, Maine	Traps, animal		Dec. 5, 1865.
50,323	Baker, Robert B. (See Parry, George T., assignor.)	Providence, R. I.	Paper-making machines, dryer-felts for		Oct. 10, 1865.
48,243	Baker, Seth W.	England	White lead, manufacture of		June 13, 1865.
48,243	Baker, William				
	Baker, William E., and William O. Grover. (See Grover & Baker.) Extension.				

47, 915	Baile, Frederick	New York, N. Y.	Deck	May 30, 1865
47, 917	Bamford, William, and J. F. Tate, Jr.	Milwaukee, Wis.	Move	June 6, 1865
48, 545	Banister, George	Hartford, Vt.	Hose, chlorine, &c., socket for	July 4, 1865
48, 594	Banciler, Isaac	Newark, N. J.	Buckles	Feb. 14, 1865
46, 537	Banks, Henry C. (See Duff, William L., assignor.)			
51, 984	Banks, William	Mount Pleasant, Iowa	Cultivators	Feb. 28, 1865

48, 641	Barnard, Milton	Unionville, Pa.	Saws, circular, on their arbors, mode of adjusting	Feb. 14, 1865
51, 002	Barnes, Aaron P.	Boston, Mass.	Racks, sheep	July 11, 1865
49, 961	Barnes, Charles	Cincinnati, Ohio	Spirometers	Nov. 21, 1865
49, 362	Barnes, H. R. and M. T.	Watkins, N. Y.	Steam gauges	Sept. 19, 1865
51, 541	Barnes, Merrick M.	East Hampton, Mass.	W.-ll, deep, tubes, sinking	Aug. 15, 1865
48, 356	Barnes, William S.	Watertown, N. Y.	Sewing machines treadle-motion for	Dec. 19, 1865
	Barnett, Albert B., et al. (See Miller, Barnett & Study.)		Neck ties and shirt collars together, clasps for holding	June 27, 1865
50, 091	Barnett, Joseph	Dayton, Ohio	Ladder, step	Sept. 26, 1865
	Barnhart, George, and George F. Hassenpflug (See Hassenpflug and Barnhart.)			
49, 846	Barnes, Chas., and John F. Hempeley. (See Hempeley & Barnes.)			
48, 891	Barnum, E. T.	Waterbury, Conn.	Buttons	Sept. 12, 1865
49, 493	Barnum, J. W., and Peter M. McNoah	Detroit, Mich.	Petroleum, vessel for holding	July 25, 1865
2, 060	Barriquet, Lisle W.	New York, N. Y.	Spirometers	Aug. 22, 1865
50, 549	Barratt, Edward D., assignor to self and H. B. Bigelow	New Haven, Conn.	Engines, steam	Aug. 29, 1865
46, 997	Barratt, E. L.	Springfield, Ohio	Envelope	Oct. 24, 1865
	Barron, Thomas J.	Brooklyn, N. Y.	Liquids, inflammable, so as to prevent accidents, mode of preparing	Mar. 28, 1865
50, 325	Barth, Henry	Cincinnati, Ohio	Shears for cutting metal	Oct. 10, 1865
49, 404	Barth, Henry, and Charles Wells. (See Wells & Barth.)			
	Bartholomew, Seth W.	Burr Oak, Mich.	Stove-pipe thimble	Aug. 22, 1865

## List of patentees of inventions, designs, and reissues, 1865—Continued.

No.	Patentee.	Residence.	Invention or discovery.	Date.
47, 082	Bartholow, Roberts.	Cincinnati, Ohio	Blacking, &c., manufacture of.	Apr. 4, 1865.
47, 083	Bartholow, Roberts.	Cincinnati, Ohio	Oil for paint.	Apr. 4, 1865.
47, 084	Bartholow, Roberts.	Cincinnati, Ohio	Petroleum, for the manufacture of paints, &c., process of preparing.	Apr. 4, 1865.
49, 363	Bardle, Thompson C.	Independence, Iowa.	Sugar-evaporator.	Aug. 15, 1865.
49, 684	Barlett, F. C., and Wm. F. Morgan. (See Morgan & Barlett.)	La Grange, Mo.	Evaporating pans.	Sept. 5, 1865.
47, 916	Barlett, James C., and Joseph F. Wilson. (See Wilson & Barlett.)	Harmar, Ohio.	Digger and separator, potato.	May 30, 1865.
46, 064	Barlett, Joseph W.	New York, N. Y.	Sewing machines.	Jan. 31, 1865.
2, 180	Barlett, Joseph W.	New York, N. Y.	Sewing machine, frame of a.	Oct. 10, 1865.
2, 215	Barlett, Joseph W.	New York, N. Y.	Sewing machine, standard and treadle of a.	Nov. 7, 1865.
47, 271	Barlett, Stephen S.	Providence, R. I.	Spinning frames, self-lubricating spindle, bolsters of.	Apr. 18, 1865.
47, 691	Barlett, Stephen S.	Providence, R. I.	Harvesters.	May 16, 1865.
47, 692	Barlett, Stephen S.	Providence, R. I.	Mowing machines.	May 16, 1865.
1, 852	Barlett, Stephen S., assignor to self and Thomas H. Dodge	Providence, R. I.	Mortising machines.	Jan. 17, 1865.
48, 642	Bartol, B. H. (See Bechtel, William H., assignor.)	Baltimore, Md.	Shells, explosive, compound.	July 11, 1865.
47, 380	Barton, Henry B.	Metamora, Ill.	Cultivators.	Apr. 25, 1865.
50, 439	Barton, Lester B.	Metamora, Ill.	Cultivators.	Oct. 31, 1865.
46, 623	Barton, William E.	East Hampton, Conn.	Sleigh bells to straps, attaching.	Mar. 7, 1865.
48, 039	Barton, William E.	East Hampton, Conn.	Buckle attachment.	June 6, 1865.
48, 040	Barton, William E.	East Hampton, Conn.	Sleigh bell attachment.	June 6, 1865.
50, 870	Barram, Walker B., assignor to self and Henry B. Fenton.	Reading, Conn.	Sewing machine, button hole.	Nov. 7, 1865.
49, 191	Bassett, Charles H., assignor to the Birmingham Button Company	Birmingham, Conn.	Ivory machines for cutting rings from.	Aug. 1, 1865.
51, 003	Bassett, D.	Killingly, Conn.	Leaves, let-off and take-up motion for.	Nov. 21, 1865.
46, 770	Bassett, John A.	Salem, Mass.	Burners for carburetted air.	Mar. 14, 1865.
46, 771	Bassett, John A.	Salem, Mass.	Air, apparatus for carburetting.	Mar. 14, 1865.
47, 272	Bassett, John A.	Salem, Mass.	Air, apparatus for carburetting.	Apr. 18, 1865.
47, 273	Bassett, John A.	Salem, Mass.	Barrel for holding oil.	Apr. 18, 1865.
47, 766	Bassett, John A.	Salem, Mass.	Burner, gas.	May 23, 1865.
50, 675	Bassett, John A.	Salem, Mass.	Air, apparatus for carburetting.	Oct. 31, 1865.
49, 823	Bassett, John A., assignor to Oliver Bennett.	Salem, Mass.	Furnaces, steam blowers for.	Sept. 5, 1865.
46, 024	Bassett, J. A., and E. L. Norfolk.	Salem, Mass.	Combustion, system of supporting.	Mar. 7, 1865.
48, 011	Bassett, J. A., and O. C. Smith, assignors to Oliver Bennett.	Salem, Mass.	Air injectors.	May 30, 1865.
46, 606	Bassett, R. M., et al. (See Shepard, William A., assignor.)	Cambridge, Mass.	Petroleum, vessels for holding.	Feb. 7, 1865.
48, 613	Bassett, R. N., et al. (See Mallory, William H., assignor.)	Newburyport, Mass.	Bridges, trusses for.	July 11, 1865.
46, 538	Batchelder, William W.	New York, N. Y.	Lamps.	Feb. 26, 1865.
47, 381	Batchelder, W. W.	New York, N. Y.	Burners, coal oil.	Apr. 25, 1865.
51, 508	Batcheller, Charles, assignor to self, E. Purks, and J. R. Sherman.	Kenneb, N. H.	Wells, apparatus for boring.	Dec. 14, 1865.

50,796	Hatchler, C. W., et al. (See Hunt, Johnstun, assignor.)	Union, Mass.	Best cramping machine.	Nov. 7, 1865.
50,801	Hatchler, C. W.	Lowville, N. Y.	Boys' kite machine.	Nov. 14, 1865.
46,683	Bates, Albert U., and Silas S. Mowry. (See Mowry & Bates.)	New York, N. Y.	Grasshopper and projectile	Mar. 7, 1865.
47,917	Bates, Benjamin F., and Charles R. Macy.	Kingston, Mass.	Stonell plates, apparatus for applying paint to.	May 30, 1865.
48,892	Bates, Caleb.	Philadelphia, Pa.	Wells, drills for boring.	July 25, 1865.
47,683	Bates, Robert.	Elmore, Ill.	Stamming, instruments for the cure of. (Extension.)	Sept. 26, 1865.
46,636	Bates, William E.	Centre Point, Iowa.	Cultivators.	May 16, 1865.
	Bates, William N.		Seeding machine.	Mar. 7, 1865.
	Bates, Wm. S., and Catharine S. Smith, administrators, &c. (See Smith, John.)			
51,542	Battle, Joseph W.	Worcester, Mass.	Knife polisher.	Dec. 19, 1865.
49,467	Battle, Edwin, assignor to self and James Crane.	Mont Clair, N. J.	Paint.	Aug. 15, 1865.
49,982	Batty, L. M.	Canton, Ohio.	Mowing machines.	Sept. 19, 1865.
49,983	Batty, L. M.	Canton, Ohio.	Harvesting machines.	Sept. 19, 1865.
49,984	Batty, L. M.	Canton, Ohio.	Harvesters, rake attachments to.	Sept. 19, 1865.
49,384	Batty, William, and James Nichols. (See Nichols & Batty.)	Newark, N. J.	Punch, spring.	Aug. 15, 1865.
46,627	Bauer, Peter.	Philadelphia, Pa.	Mills, bone.	Mar. 7, 1865.
47,610	Baugh, Edwin P.	Philadelphia, Pa.	Lime, superphosphate of, mode of manufacturing.	May 9, 1865.
47,611	Baugh, Edwin P.	Philadelphia, Pa.	Manure, method of treading.	May 9, 1865.
	Baugh, J. P., E. P. and D. (See Adamson, William, assignor.)			
	Reisene			
51,692	Baum, C. C.	Oxford, Iowa.	Plough cultivator.	Dec. 26, 1865.
48,253	Baumelster, John.	Detroit, Mich.	Heater, water, stove pipe.	June 20, 1865.
46,988	Baur, Julius.	New York, N. Y.	Barrels for holding oil, &c., process for lining.	Mar. 28, 1865.
47,510	Baur, Julius.	Brooklyn, N. Y.	Steel, manufacture of.	May 2, 1865.
48,041	Baur, Julius.	Brooklyn, N. Y.	Barrels, oil, composition for lining.	June 6, 1865.
49,215	Baur, Julius.	Brooklyn, N. Y.	Barrels impervious to petroleum, &c., process for rendering.	Aug. 8, 1865.
			(Antedated July 24, 1865.)	
49,495	Baur, Julius.	New York, N. Y.	Steel, manufacture of.	Aug. 22, 1865.
47,382	Bauch, J. J., assignor to Bauch & Lomb.	Rochester, N. Y.	Microscopes.	Apr. 25, 1865.
49,216	Bauman, Abner L.	Minneapolis, Minn.	Ploughs, snow.	Aug. 7, 1865.
46,326	Bavler, John.	Newark, N. J.	Buckles.	Aug. 8, 1865.
49,989	Bavler, John.	Newark, N. J.	Tobacco smoke purifier.	Feb. 14, 1865.
46,065	Baxendale, Samuel.	South Malden, Mass.	Wadding, &c., machine for surface sizing.	Mar. 28, 1865.
	Baxter, Henry and John A. Fitch. (See Gibson, Wm., assignor.)			
46,870	Baxter, James P.	Portland, Me.	Pipe, smoking.	Mar. 21, 1865.
2,181	Baxter, James P.	Portland, Me.	Trade mark.	Oct. 10, 1865.
	Bay State Hardware Company. (See Miles, Nathaniel, assignor.)			
48,506	Bayard, R. B.	Philadelphia, Pa.	Fuel, artificial.	July 4, 1865.
47,383	Baylor, Charles F.	Clinton, N. J.	Churns.	Apr. 25, 1865.
49,695	Baymount, N. P., et al. (See Ochiltree & Johnson, assignors.)			
49,696	Beach, A. Ely.	Stratford, Conn.	Cars, railroad.	Sept. 5, 1865.
49,697	Beach, A. Ely.	Stratford, Conn.	Railroads, draught cables for.	Sept. 5, 1865.
49,698	Beach, A. Ely.	Stratford, Conn.	Railroads, sliding draught cables for.	Sept. 5, 1865.
49,699	Beach, A. Ely.	Stratford, Conn.	Railroads, trucks for.	Sept. 5, 1865.
2,104	Beach, A. Ely.	Stratford, Conn.	Letterers, packages, &c., mode of transporting and delivery.	Sept. 5, 1865.
	Beach, E. B., assignor through agents assignments to George H. and J. T. Clark.	Meriden, Conn.	Chucks, self centring. (Belaine.)	Nov. 14, 1865.
51,285	Beach, Frederick C.	Stratford, Conn.	Fork and sharpener, combined.	Dec. 5, 1865.

48,366	Belcher, H. B. (See Gale, Warren, assignor.)	Bellevue.
51,683	Belcher, H. B. (See Gale, Warren, assignor.)	Bellevue.
46,353	Belfield, Henry	Bellevue.
45,798	Bel, J. O.	Bellevue.
46,901	Bel, Thomas	Bellevue.
46,901	Bel, William G., assignor to William G. Bell & Co.	Bellevue.
46,146	Bel, William S., assignor to self and William S. Bell, Jr.	Bellevue.
	Bel, William S., Jr.	Bellevue.
	Bel, W. S., Jr., and Chas. Spofford, (See Spofford & Bell.)	Bellevue.
51,254	Belknap, C. L. (See Scott, Oliver P., assignor.)	Bellevue.
51,684	Bellevue, W. S., et al. (See Field, L. C., assignor.)	Bellevue.
	Benda, William A.	Bellevue.
	Bench, George and William.	Bellevue.
	Benedict and Barnham, manufacturing company. (See Croft, Edward, assignor.)	Bellevue.
46,772	Benedict, Philander H.	Bellevue.
46,645	Benn, B. H., and W. H. Burgess	Bellevue.
47,874	Benner, L. D., and W. R. Evans. (See Evans & Benner.)	Bellevue.
49,547	Bennett, Anthony A.	Bellevue.
	Bennett, Charles F., assignor to Maria Bennett.	Bellevue.
46,761	Bennett, Edwin, assignor to self and W. T. Gillinder.	Bellevue.
	Bennett, Edwin, and W. T. Gillinder. (See Gillinder & Bennett.)	Bellevue.
47,385	Bennett, Jacob B., and James S. Gibbs	Bellevue.
49,701	Bennett, J. R., and P. W. Birck	Bellevue.
46,149	Bennett, Noah	Bellevue.
	Bennett, Oliver. (See Bassett & Smith, assignors.)	Bellevue.
50,551	Bennett, Oliver. (See Bassett, John A., assignor.)	Bellevue.
50,572	Bennett, Silas	Bellevue.
46,436	Bennett, William H.	Bellevue.
	Benoit, Charles Petit	Bellevue.
	Bessie, Joseph. (See Henry, Levi J., assignor.)	Bellevue.
45,688	Bent, Samuel S.	Bellevue.
	Bentley, Daniel, and Alexander W. Hall. (See Hall & Bentley.)	Bellevue.
46,420	Bentley, George J.	Bellevue.
47,676	Bentley, George W., assignor to self and Charles S. Hine.	Bellevue.
47,862	Bentley, George W., assignor to self and Charles S. Hine.	Bellevue.
46,990	Benton, John B.	Bellevue.
	Benz, J., et al. (See Dupper, Charles F., assignor.)	Bellevue.
	Berget, J. G., and A. A. Foubert. (See Foubert & Bequet.)	Bellevue.
49,846	Berdan, Hiram	Bellevue.
45,886	Berdan, Hiram, assignor to L. P. Morton, trustee of H. Berdan, A. A. Sclover, and William H. Benson.	Bellevue.
45,889	Berdan, Hiram, assignor to L. P. Morton, trustee of H. Berdan, A. A. Sclover, and William H. Benson.	Bellevue.
45,901	Berdan, Hiram, assignor to L. P. Morton, trustee of H. Berdan, A. A. Sclover, and William H. Benson.	Bellevue.
46,292	Berdan, Hiram, assignor to L. P. Morton, trustee of H. Berdan, A. A. Sclover, and William H. Benson.	Bellevue.
2,163	Berg, Ezechiel, and William B. Benson.	Bellevue.
	Steam generators, water gauge for	Bellevue.
	Evaporator	Bellevue.
	Reels, tanks, mode of rolling	Bellevue.
	Met cutters	Bellevue.
	Collars, paper, folding	Bellevue.
	Collars, paper	Bellevue.
	Boots and shoes, machines for shaving heels of	Bellevue.
	Pumps	Bellevue.
	Wagon brake	Bellevue.
	Buttons	Bellevue.
	Candy, medicated	Bellevue.
	Carding engines, waste-saving attachment to	Bellevue.
	Cloth drying machines	Bellevue.
	Furnace, annealing	Bellevue.
	Soap, manufacture of	Bellevue.
	Table and bedstead combined	Bellevue.
	Apples, machine for coring, slicing, and stringing	Bellevue.
	Heat from a furnace, apparatus for utilizing	Bellevue.
	Barrel heads, cutters for	Bellevue.
	Tool holder, adjustable	Bellevue.
	Register and summer place, combined	Bellevue.
	Hoops, machine for riving	Bellevue.
	Boxes, bucking, manufacture of	Bellevue.
	Boxes of sheet metal, machine for manufacturing	Bellevue.
	Water meters. (Antedated March 12, 1865)	Bellevue.
	Gun wipers	Bellevue.
	Fire-arms, breech-loading, rifling	Bellevue.
	Fire-arms, breech-loading	Bellevue.
	Fire-arms, attaching bayonets to	Bellevue.
	Cartridges for breech-loading rifled fire-arms	Bellevue.
	Sign	Bellevue.

## List of patentees of inventions, designs, and reissues, 1865—Continued.

No.	Patentee.	Residence.	Invention or discovery.	Date.
47, 787	Bergman, Henry, and R. Borchardt. (See Borchardt & Bergman.)	Union Hill, N. J.	Barnes, gas	May 23, 1865.
46, 629	Berg, Herman	Galesburg, Ill.	Planters, corn	Mar. 7, 1865.
49, 601	Bergen, George I.	Galesburg, Ill.	Planters, corn	Aug. 29, 1865.
1, 935	Bergen, George I.	Galesburg, Ill.	Planters, corn	Apr. 18, 1865.
2, 134	Berger, Henry	New York, N. Y.	Lincoln, A., best of	July 18, 1865.
46, 066	Bergner, Theodore	Philadelphia, Pa.	Photographic instrument for cutting	Jan. 31, 1865.
46, 440	Bergtetter, Edwin L.	Berryburg, Pa.	Churns	Feb. 21, 1865.
49, 335	Berry, C. M., and Charles C. Sheldrake, assignors to selves and J. Bready.	Philadelphia, Pa.	Soda fountain, strip stand for	Aug. 8, 1865.
49, 051	Bessemer, Henry	England	Iron and steel, manufacture of. (Patented in England March 15, 1856.)	July 25, 1865.
49, 052	Bessemer, Henry	England	Iron and steel, manufacture of. (Patented in England May 31, 1856.)	July 25, 1865.
49, 053	Bessemer, Henry	England	Iron and steel, manufacture of. (Patented in England January 24, 1857.)	July 25, 1865.
49, 054	Bessemer, Henry	England	Iron and steel, process for manufacturing axes, &c., from. (Patented in England March 16, 1859.)	July 25, 1865.
49, 055	Bessemer, Henry	England	Iron and steel, machine for the manufacture of. (Patented in England March 1, 1860.)	July 25, 1865.
51, 397	Bessemer, Henry	England	Iron and steel, manufacture of. (Patented in England February 1, 1861.)	Dec. 5, 1865.
51, 398	Bessemer, Henry	England	Iron and steel, manufacture of. (Patented in England January 8, 1862.)	Dec. 5, 1865.
51, 399	Bessemer, Henry	England	Iron and steel, malleable, manufacture of. (Patented in England January 13, 1863.)	Dec. 5, 1865.
51, 400	Bessemer, Henry	England	Iron and steel, malleable, manufacture of. (Patented in England January 13, 1863.)	Dec. 5, 1865.
51, 401	Bessemer, Henry	England	Iron and steel, malleable, manufacture of. (Patented in England November 5, 1863.)	Dec. 5, 1865.
49, 917	Best, Isaiah. (See Brewer & Wilmer, assignors.)	Schenectady, N. Y.	Water elevators	Aug. 8, 1865.
43, 869	Best, Jacob H.	Pittsburg, Pa.	Glass, manufacture of	Jan. 10, 1865.
49, 218	Betteley, Albert	Boston, Mass.	Fuel, preparing peat for	Aug. 6, 1865.
51, 004	Betteley, Albert	Boston, Mass.	Paper stock, manufacture of	Nov. 21, 1865.
39, 069	Betts, Henry F.	Norwalk, Conn.	Lanterns	Aug. 1, 1865.
51, 005	Betts, Lewis F.	St. Louis, Mo.	Lanterns	Nov. 28, 1865.
47, 612	Betzol, Charles W.	Philadelphia, Pa.	Trusses	May 9, 1865.
48, 323	Bever, John T.	New York, N. Y.	Water pipes from bending, apparatus for preventing	Mar. 14, 1865.
48, 324	Bever, John T.	Bethel, Ill.	Cultivators	June 27, 1865.
51, 996	Beyer, John	Bethel, Ill.	Cultivators	Dec. 5, 1865.
48, 615	Beyer, John, assignor to self and John E. Smith.	Ruffalo, N. Y.	Wells, mode of extracting drills from	July 4, 1865.
50, 871	Beyer, I. O., assignor to self and J. Ulmsky.	St. Louis, Mo.	Photographic prints, process for coloring	Nov. 9, 1865.
47, 511	Bos, George	St. Louis, Mo.	Evaporating pan	May 9, 1865.
	Bos, G., et al. (See Grenell, Bos & Stoll.)	Mokena, Ill.	Evaporating pan	May 9, 1865.

48, 496	Bibby, John, and Allen Lapham	Brooklyn, N. Y.	Stills for distilling petroleum.	July 25, 1865
47, 085	Bickel, J. L., and Theo. Goudelinger. (See Goudelinger & Bickel.)	Philadelphia, Pa.	Crutches	May 16, 1865
48, 043	Bickel, August	Elizabeth, N. J.	Press machine	June 8, 1865
48, 785	Bickel, William	Pottsville, Pa.	Drills for boring rocks, &c.	July 15, 1865
48, 043	Bickford, Allen P. (See Labounty, Leonard J., assignor.)	Boston, Mass.	Air engines	June 6, 1865
48, 073	Bickford, Dana	Boston, Mass.	Engine, rotary mechanism for operating	Aug. 1, 1865
49, 070	Bickford, Dana	Boston, Mass.	Air apparatus for carburettling	Nov. 21, 1865
51, 006	Bickford, Dana	Boston, Mass.	Elevators hydraulic	Nov. 28, 1865
51, 128	Bickford, Dana	Boston, Mass.	Press for blanking, &c.	Nov. 28, 1865
51, 129	Bickford, Dana	Boston, Mass.	Press for blanking, &c.	May 9, 1865
47, 677	Bickford, John S., assignor to self and Joseph Taylor	Great Britain	Screw-nutting machine	Jan. 17, 1865
45, 946	Bickel, A. Church	Boston, Mass.		
47, 161	Bidwell, D. M. Robertson. (See Robertson & Bidwell.)	Prussia	Cork pull.	April 4, 1865
	{ Bidwell, A. C. F.	Hamburg		
	{ Schwab, C. C. F.	Springfield, Mass.	Soda water, &c., apparatus for cooling	Nov. 28, 1865
51, 130	Biglow, Edmund F.	Chicago, Ill.	Collar, paper	June 27, 1865
48, 359	Biglow, Gilbert	Philadelphia, Pa.	Horse-shoe machines.	Oct. 17, 1865
50, 440	Biglow, H. B., & al. (See Barrett, Edw'd D., assignor.) Release.			
50, 440	Biglow, Lewis H.			
46, 630	Bignor, S. O., & al. (See Oliver, William G., assignor.)	Cuyahoga Falls, Ohio	Reaping machines	Mar. 7, 1865
46, 774	Billard, Joshua Y. (See Reed, John C., assignor.)	New York, N. Y.	Bleaching, preparation of cloth and vegetable fibre for. (Ante-dated February 27, 1865.)	Mar. 14, 1865
	Billing, George W.			
50, 414	Billings, Jasper, assignor to self, Thos. D. Mitchell, and A. Kuhns	Dayton, Ohio	Drying boxes, fruit	Oct. 10, 1865
45, 957	Billing, William B.	New York, N. Y.	Stove, coal-oil	Jan. 17, 1865
50, 892	Billing, William B.	New York, N. Y.	Lamps, coal-oil, for cooking purposes	Nov. 14, 1865
48, 793	Billon, Louis	Brooklyn, N. Y.	Collar, metallic	Sept. 5, 1865
48, 793	Billon, Louis	Brooklyn, N. Y.	Shirt bosoms, metallic	Sept. 5, 1865
51, 414	Blahney, J., & al. (See Boechian, Blindner & Caffon.)	Brooklyn, N. Y.	Watch escapements	Dec. 12, 1865
46, 908	Bingham, E. B.	Newark, N. J.	Twine from paper, process of manufacturing	Feb. 7, 1865
51, 287	Bingham, Solomon	Troy, N. Y.	Bakes, horse	Dec. 5, 1865
46, 331	Bisney, Benjamin S. (See Goodale, E. W., assignor.)	Boston, Mass.	Lamps, lanterns, &c., street	Mar. 7, 1865
48, 705	Birchard, John	Milwaukee, Wis.	Air apparatus for carburettling	July 11, 1865
46, 441	Birchmeyer, Paul	Syracuse, N. Y.	Cannon, brushes for	Feb. 21, 1865
	Birk, P. W., and J. R. Bennett. (See Bennett & Birk.)			
	Birk, Charles G. (See Arnold, Varnum G., assignor.)			
48, 044	Bird, James	New York, N. Y.	Holding machine	June 6, 1865
45, 958	Bird, Joseph C.	Rising Sun, Md.	Horse power, safety brakes for	Jan. 17, 1865
51, 988	Bird, Lewis J. (See Wood, Alfred, assignor.)	Flemington, N. J.	Beef dried, and vegetable cutter	Dec. 5, 1865
50, 678	Birkby, John Q.	Philadelphia, Pa.	Heater, gas	Oct. 31, 1865
49, 071	Birmingham Button Company. (See Bassett, Chas. H., assignor.)	York, Ohio	Pokes, animal	Aug. 1, 1865
48, 786	Bishop, Abner W.	Poughkeepsie, N. Y.	Churns	July 18, 1865
48, 786	Bishop, Caleb G.			
48, 786	Bishop, Charles and Thomas Neely. (See Neely & Bishop.)	Meriden, Conn.	Monitors' bench	Feb. 7, 1865
48, 209	Bishop, Charles L.	Burton, Ohio	Straw cutters and feed mixer combined	Apr. 25, 1865
47, 386	Bishop, E. F.			

*List of patentees of inventions, designs, and reissues, 1865—Continued.*

No.	Patentee.	Residence.	Invention or discovery.	Date.
49,966	Bishop, Frederick W.	West Haven, Conn.	Wagon, freight, shipping and unshipping blind boards to. (Antedated August 31, 1865.)	Sept. 19, 1865.
47,180	Bishop, J. W.	New Haven, Conn.	Boiler feeders.	Apr. 11, 1865.
47,181	Bishop, J. W.	New Haven, Conn.	Boiler feeders, automatic.	Apr. 11, 1865.
47,182	Bishop, J. W.	New Haven, Conn.	Steam traps.	Apr. 11, 1865.
47,183	Bishop, J. W.	New Haven, Conn.	Low-water indicators.	Apr. 11, 1865.
47,184	Bishop, J. W.	New Haven, Conn.	Water regulator.	Apr. 11, 1865.
46,750	Bishop, Richard F., and Wm. Gladden. (See Gladden & Bishop.)	New York, N. Y.	Telegraph wires, composition for insulating.	Mar. 7, 1865.
45,965	Bishop, Samuel T., assignor to the Bishop Gutta-percha Company	Fond du Lac, Wis.	Horse-power elevator and excavator.	Jan. 24, 1865.
45,966	Bishop, Stephen T., and Andrew Staveley	Fond du Lac, Wis.	Horse-power elevator and excavator.	Jan. 24, 1865.
45,967	Bishop, Stephen T., and Andrew Staveley	Fond du Lac, Wis.	Horse-power elevator and excavator.	Jan. 24, 1865.
45,968	Bishop, Stephen T., and Andrew Staveley	Fond du Lac, Wis.	Horse-power elevator and excavator.	Jan. 24, 1865.
47,788	Black, Andrew	New York, N. Y.	Rendering pan.	May 23, 1865.
50,415	Black, Horatio N., assignor to self, Wm. L. and Henry K. Boyer	Philadelphia, Pa.	Car spring.	Oct. 10, 1865.
51,543	Black, Jas. and Robt. E. Rogers. (See Rogers & Black.)	Lancaster, Ill.	Flongha, gung.	Dec. 19, 1865.
49,849	Black, J. F., and W. L. Terrel.	Spring Hills, Ohio.	Chairs, invalid.	Sept. 12, 1865.
50,883	Blackie, John.	Washington, D. C.	Wells, deep, sectors for.	Nov. 14, 1865.
49,824	Blackie, John, assignor to self, Wm. C. Dodge, and Wm. S. King	Washington, D. C.	Galvanic batteries.	Sept. 5, 1865.
50,791	Blackwood, Ephraim N.	McGraverville, N. Y.	Potters ware, machine for moulding.	Nov. 7, 1865.
1,668	Blackwood, J. V., deceased, by Emma A. Blackwell, administratrix	Ovid, N. Y.	Clover, machine for hulling.	Nov. 7, 1865.
51,269	Blair, Thomas S.	Pittsburg, Pa.	Furnaces for converting bars into steel.	Feb. 14, 1865.
49,850	Blanchin, William D., and James E. Atwood	Lynn, Mass.	Carpet fastener.	Dec. 5, 1865.
46,067	Blake, Alpheus D.	Milton, Mass.	Ventilator, centrifugal.	Jan. 31, 1865.
47,883	Blake, George F., assignor to self, P. Hubbell, and Job A. Turner	Medford, Mass.	Water meters.	May 23, 1865.
47,884	Blake, George F.	Boston, Mass.	Water meters.	Dec. 12, 1865.
51,415	Blake, George F.	Boston, Mass.	Water meters.	Dec. 12, 1865.
49,408	Blake, Gorham. (See Clark, Anthony, assignor.)	New Britain, Conn.	Padlocks.	Aug. 15, 1865.
47,696	Blake, Henry D., assignor to F. and F. Corbin.	Boston, Mass.	Boots and shoes, construction of.	May 16, 1865.
49,219	Blake, Lyman R.	Boston, Mass.	Boot or shoe, nailed.	Aug. 6, 1865.
47,375	Blake, Lyman R., and Gordon McKay. (See McKay & Blake.)	Almond, N. Y.	Roof composition, fire-proof.	Apr. 18, 1865.
47,376	Blake, N. E.	Worcester, Mass.	Bread and vegetable cutter.	Jan. 3, 1865.
45,689	Blake, Solomon E.	Worcester, Mass.	Ice, device for cutting and shaving.	Feb. 14, 1865.
45,690	Blake, Thomas S., and O. E. Mosher.	New York, N. Y.	Refrigerator. (Antedated Feb. 12, 1865.)	Jan. 3, 1865.
47,085	Blakeney, John.	Philadelphia, Pa.	Boots and shoes, machines for securing soles to.	Apr. 4, 1865.
2,022	Blakeloe, Charles F.	New York, N. Y.	Dolls, arms for.	Jan. 3, 1865.
47,681	Blakeloe, Erastus	New Haven, Conn.	Belt hook, military.	Feb. 7, 1865.
1,881	Blakeloe, Erastus	New Haven, Conn.	Cartridge-box.	Feb. 7, 1865.
46,210	Blakeloe, Erastus	New Haven, Conn.	Kit, mess.	Feb. 7, 1865.
50,327	Blakeloe, J. G., and A. Mansel.	Sing Sing, N. Y.	Grate bars for steam generators.	Oct. 10, 1865.
50,327	Blakeloe, Thos. H., and Harry Mardon. (See Mardon & Blakeloe.)	Sing Sing, N. Y.	Grate bars for steam generators.	Oct. 10, 1865.

46, 449	Blanchard, John.	Pawtucket, R. I.	Leaves, hair-cloth, waff-feeding device for. (Antedated Feb. 16, 1865)	Feb. 21, 1865.
50, 441	Blanchard, Virgil W. Blythe, J. P. and D. E. (See Drake, Robert, assignor.)	Bridgeport, Vt.	Harvesters	Oct. 17, 1865.
48, 150	Blossing, William	Jeffersonville, Ohio.	Planters, corn	June 13, 1865.
48, 254	Blythe, Henry W.	Buffalo, N. Y.	Lanterns, regulator for the wicks of	June 30, 1865.
50, 673	Blythe, Henry W.	Ottumwa, Iowa	Vegetable cutter.	Oct. 31, 1865.
47, 768	Blythe, Henry W.	Port Huron, Mich.	Bed bottom	May 23, 1865.
51, 131	Blythe, Henry W.	Port Huron, Mich.	Blind, venetian, for windows.	Nov. 26, 1865.
50, 530	Blythe, Henry W.	Richmond, Ind.	Planes, bench	Oct. 17, 1865.
51, 416	Blythe, Henry W.	Fairfield, Vt.	Weighting apparatus	Dec. 12, 1865.
48, 897	Blythe, Henry W.	Boston, Mass.	Gallons, spring	July 25, 1865.
51, 685	Blythe, Henry W.	Fond du Lac, Wis.	Tire cooler	Dec. 26, 1865.
46, 283	Blocher, John, and Job S. Dawley & Blocher. Bloom, Joseph Alexander	Lynn, Mass.	Coal and ash sifter	Feb. 7, 1865.
49, 367	Blood, Abijah E. and Josiah B. assignors to selves and William J. and Benjamin F. Larabee.	New York, N. Y.	Yarns, felted, manufacture of	Sept. 5, 1865.
51, 686	Blood, A. E. and E. P. Woods. (See Woods & Blood.)	Lowell, Mass.	Pumps	Dec. 26, 1865.
51, 290	Bloodgood, John H., and	Philadelphia, Pa.	Compasses, liquid	Dec. 5, 1865.
45, 758	Bloom, Joseph Alexander	Brooklyn, N. Y.	Gun, spring. (Antedated May 2, 1862.)	Jan. 3, 1865.
47, 790	Blythe, John E., assignor to M. Vedder and H. S. Myers	Pawtucket, R. I.	Boilers, steam	May 23, 1865.
49, 971	Boardman, Charles T.	Lancaster, Pa.	Cork machines	Sept. 19, 1865.
48, 478	Boardman, Horace	New York, N. Y.	Iron, wrought, from the ore, manufacture of	June 27, 1865.
49, 220	Boch, Louis, and Albert F. Wheeler	Sheboygan, Wis.	Cork, artificial	Aug. 8, 1865.
46, 330	Boch, Henry	New York, N. Y.	Buttons, machine for making	Feb. 14, 1865.
48, 646	Bodges, John S.	Bath, N. Y.	Hoppers, feed-regulating mechanism for	July 11, 1865.
51, 687	Bodges, John S.	Bath, N. Y.	Separators, grain	Dec. 26, 1865.
2, 276	Bodiker, James F.	Madison, Wis.	Picture, emblematic	Oct. 24, 1865.
51, 544	Bodwell, H. E., Jr.	Millburn, N. J.	Sewing machines, device for controlling the spool-thread in	Dec. 19, 1865.
50, 652	Boeken, Rinhold	Brooklyn, N. Y.	File, letter or invoice	Oct. 24, 1865.
49, 221	Boeken, R. and William Staehlen	Brooklyn, N. Y.	Hydrometers	Aug. 8, 1865.
51, 007	Boeklen, Rinhold	Brooklyn, N. Y.	Pumps, deep-well	Nov. 21, 1865.
51, 006	Boeklen, Rinhold	Brooklyn, N. Y.	Oil ejectors	Nov. 21, 1865.
2, 135	Bogert, Horatio. (See Bradford, Hezekiah, assignor.)	New York, N. Y.	Collars, cuffs, &c., paper	July 18, 1865.
49, 851	Bogue, John	Auburn, Wis.	Evaporator	Sept. 12, 1865.
46, 539	Bogman, William	New York, N. Y.	Padlocks	Feb. 26, 1865.
2, 223	Bohner, Frederick	New York, N. Y.	Pipe, sheet-metal, elbow of a	Dec. 5, 1865.
50, 448	Boland, D. A.	Pittsburg, Pa.	Presses, upsetting	Oct. 17, 1865.
48, 202	Bolander, Frederick C., assignor to self and William F. Doggett.	Lima, Ohio	Broom head	June 13, 1865.
46, 013	Boles, John, 2d	Boston, Mass.	Bridges	May 30, 1865.
47, 920	Boles, John, 2d	Boston, Mass.	Bridges	May 30, 1865.
48, 647	Boley, John	Baldwinsville, N. Y.	Pumps	July 11, 1865.
46, 046	Bollen, George N., assignor to S. W. Walker & Co.	Kalamazoo, Mich.	Wringing machine	Jan. 24, 1865.
46, 175	Bollen, George N., assignor to S. W. Walker & Co.	Kalamazoo, Mich.	Tools, boring, coupling, shafts of	Jan. 31, 1865.
47, 613	Bollen, Jesse N.	Baltimore, Md.	Castings, chilled, making	May 9, 1865.
50, 680	Bollman, George W., and William Neemes	Pittsburg, Pa.	Amalgamating gold and silver, apparatus for	Oct. 31, 1865.
46, 632	Bolthoff, H.	Burlington, Iowa.	Sewing machines, tack-creasing device for	Mar. 7, 1865.
46, 871	Bolton, James	Chicago, Ill.		Mar. 21, 1865.

## List of patentees of inventions, designs, and reissues, 1865—Continued.

No.	Patentee.	Residence.	Invention or discovery.	Date.
49, 967	Bolton, James, and Jerome Secor.	Chicago, Ill.	Sewing machines, feeding device for	Sept. 19, 1865.
	Bond, E. T. (See Field, B. F., assignor.)			
	Bond, E. T. (See Field, B. F., assignor.)	Waltham, Mass.	Lampwick's, device for trimming	Jan. 3, 1865.
45, 692	Bond, H. F.	New York, N. Y.	Boiler feeders, automatic	May 23, 1865.
47, 791	Bond, Joseph N. B.	Cleveland, Ohio.	Ladder, fruit and step	Nov. 14, 1865.
50, 884	Bond, W. E.			
	Bonnell, William H., and Harvey Ball. (See Sangster, Jas., see r.)			
47, 697	Bonney, M.	Mantua, Ohio.	Shingles, machines for measuring and counting	May 16, 1865.
50, 328	Bonwill, William G. A.	Dover, Del.	Screw-drivers. (Antedated August 27, 1865.)	Oct. 10, 1865.
46, 872	Boon, Alonso T., and William W. Spaulding.	Galesburg, Ill.	Mop. (Antedated February 1, 1865.)	Mar. 21, 1865.
50, 792	Boon, Alonso T., and Charles L. Stevens.	Galesburg, Ill.	Dryer, grain	Nov. 7, 1865.
51, 123	Boote, Thomas L., and Richard.	England	Pottery and such like wares, manufacture of. (Patented in England November 10, 1864.)	Nov. 21, 1865.
49, 981	Booth, George, assignor to Porter & Booth.	Philadelphia, Pa.	Girdrons, sheet-metal	Aug. 22, 1865.
45, 810	Bope, Jacob W.	St. Louis, Mo.	Harvesters	Jan. 10, 1865.
45, 811	Bope, Jacob W.	St. Louis, Mo.	Harvesters, corn	Jan. 10, 1865.
45, 905	Bope, Jacob W.	St. Louis, Mo.	Harvesters	Jan. 10, 1865.
45, 906	Bope, Jacob W.	St. Louis, Mo.	Harvesters	Jan. 17, 1865.
51, 009	Borchardt, R., and Henry Bergman	St. Louis, Mo.	Composition for the manufacture of toys	Jan. 17, 1865.
2, 103	Borden, Gail	Tompkinsville, N. Y.	Milk, condensing	Nov. 21, 1865.
	Bordentown Machine Company. (See Molyneux, James, assignor.)	America, N. Y.		Nov. 14, 1865.
	Bordentown Machine Company. (See Wright & Molyneux, assignors.)			
45, 895	Borlan, Charles, J. Bindtner and William Casron.	Nova Scotia	Grate, revolving	Jan. 10, 1865.
48, 635	Botwick, J. W., and Orsamus A. White. (See White & Botwick.)	Austria	Lamps	July 4, 1865.
50, 895	Botwick, J. W., and Orsamus A. White. (See White & Botwick.)			
49, 072	Bozwell, Daniel K.	Corinth, Miss.	Drying apparatus	Nov. 14, 1865.
	Bozwell, Edward H.	Philadelphia, Pa.	Brush, muckage and marking	Aug. 1, 1865.
	Bozwell, Henry J., and William Ennis. (See Ennis & Bozworth.)			
46, 443	Bottari, Giuseppe.	Boston, Mass.	Leather and process of manufacturing the same	Feb. 21, 1865.
46, 559	Bottomley, Henry	Camden, N. J.	Wool, lubricating material for	July 4, 1865.
	Bottom, James M.	New York, N. Y.	Watches in lathes, securing pinions, &c., of	July 12, 1865.
47, 376	Botyer, Poliforus	Newark, N. J.	Saddles, harness	Apr. 18, 1865.
47, 387	Boudreaux, Louis.	Tribodenez, La.	Presses	Apr. 25, 1865.
46, 506	Boughton, John W.	Appleton, Wis.	Bottles, muckage, top for	July 4, 1865.
46, 787	Boughton, John W.	Appleton, Wis.	Car-coupling	July 18, 1865.
	Bourne, Theodore. (See Stevens, John, assignor.)			
50, 217	Bouton, Andrew	Napa, Cal.	Cultivators	Oct. 3, 1865.
	Bavier, John V., and Lindsay J. Howe. (See Howe & Bavier.)			
50, 896	Bowden, William	White's Corner, N. Y.	Wells, oil, tool for removing obstacles from	Nov. 14, 1865.
47, 086	Bowditch, J. Blair.	New Haven, Ct.	Red-bottom uping	Apr. 4, 1865.
1, 929	Bowen, Andrew J., assignor through means assignment to the Tobacco Pipe Company.	Baltimore, Md.	Tobacco pipe	Apr. 4, 1865.

46, 068	Bowen, Levi. (See Fairbanks, Edward, assignor.)	Ovid Centre, Mich.	Stove machines.....	Jan. 31, 1865.
46, 529	Howers, Jacob.	Conneautville, Pa.	Ovens, coke.....	Oct. 24, 1865.
50, 529	Howers, James.	New York, N. Y.	Corsets.....	June 6, 1865.
46, 045	Howers, Daniel.	Boston, Mass.	Slipper, carpet.....	July 18, 1865.
46, 776	Hawker, Milton.	Fitchburg, Mass.	Turning gauge, conical.....	Aug. 1, 1865.
46, 073	Hawker, Milton, assignor to Warren N. Abbott.	Fitchburg, Mass.	Turner, centre.....	Aug. 17, 1865.
50, 449	Hawley, George W.	Monroe, Mich.	Stamp, postage, &c.....	Dec. 26, 1865.
51, 782	Howland, Lewis H.	Norriton, Pa.	Drill, oil.....	Sept. 13, 1865.
46, 704	Howman, Lewis H.	Lowell, Mass.	Carpet-stretcher.....	Dec. 13, 1865.
46, 545	Boyd, Robert H., and William W. Grier. (See Grier & Boyd.)			
46, 294	Boyd, Robert H., and William W. Grier. (See Grier & Boyd.)			
46, 294	Boyd, Samuel. (See Stearns & Corry, assignors.)	Newark, N. J.	Fibrous materials, picking cylinder of machines for diluting.....	Feb. 7, 1865.
46, 294	Boyd, Samuel. (See Stearns & Corry, assignors.)			
46, 294	Boyer, B. Frank. (See Heller, Daniel C., assignor.)			
46, 294	Boyer, William L., and Henry K. (See Black, Horatio N., as't.)	New York, N. Y.	Photographic lenses. (Antedated October 25, 1865.)	Oct. 31, 1865.
50, 681	Boyle, Charles B.	New York, N. Y.	Telegraph, electro-magnetic.....	Aug. 22, 1865.
46, 585	Boyle, David. (See Litchfield, Calvin A., assignor.) (Reissue.)	New York, N. Y.	Flamers, corn.....	May 9, 1865.
47, 614	Boyle, Robert, assignor to self and Giuseppe Tagliabue.	Cazenovia, N. Y.	Button to cords, securing.....	Aug. 29, 1865.
46, 674	Boyle, William H.	New York, N. Y.	Light, gas, multipliers.....	Sept. 5, 1865.
46, 674	Boynston, Edward S., assignor to the French Self-fastening Button Company.	Syracuse, N. Y.	Torpedoes for oil wells.....	Sept. 5, 1865.
46, 705	Boynston, John F.	Syracuse, N. Y.	Head, coverings for.....	Sept. 5, 1865.
49, 706	Boynston, John F.	New York, N. Y.	Pen-holders. (Antedated November 5, 1865.)	Nov. 14, 1865.
4, 510	Bracket, Thomas	Calais, Me.	Clothes and hat rack.....	Mar. 7, 1865.
50, 897	Bracket, Frederick	Newark, N. J.	Sewing machines.....	July 4, 1865.
46, 751	Bradbury, Samuel A. (See Carvay, A. C., assignor.)	Boston, Mass.	Bobbin, conical, machines for winding.....	Aug. 22, 1865.
46, 511	Bradford, E. F., and L. L. Barber.	Birmingham, Ala.	Ore, roasting and desulphurizing. (Antedated Feb. 16, 1865.)	Feb. 21, 1865.
49, 582	Bradford, George S., assignor to self and Clark Tompkins	New York, N. Y.		
46, 520	Bradford, Hezekiah, assignor to Horatio Boyer.			
46, 520	Bradley, C. E., et al. (See Cooley, Smith & Bradley.)			
46, 520	Bradley, David, and Conrad Furst. (See Lacey, John, assignor.)	New York, N. Y.	Magnets, bolsters for.....	Aug. 1, 1865.
49, 074	Bradley, Everett.	Jersey City, N. J.	Telegraphs, machines for perforating paper for.....	June 27, 1865.
46, 479	Bradley, Leverett, assignor to Marshall Lefferts	Albany, N. Y.	Knives, &c., attaching handles to.....	June 6, 1865.
49, 222	Bradley, Miles.	Albany, N. Y.	Stove pipe clamp.....	June 6, 1865.
46, 046	Bradshaw, John, and Samuel C. Wilson	Albany, N. Y.	Bedstead sofa.....	May 9, 1865.
47, 513	Brady, Elijah.	Baltimore, Md.	Ordnance, light for.....	Feb. 14, 1865.

51,426	Close, Jeremiah, and Ira Buckman, Jr.	Brooklyn, N. Y.	Hinges	May 2, 1865.
47,523	Close, W. R.	Bangor, Me.	Yoke, ox	May 2, 1865.
47,597	Close, W. R., assignor to self and G. W. Merrell	Bangor, Me.	Saws, circular, hanging	May 2, 1865.
51,697	Cloude, Alfred, and Hiram Richmond. (See Richmond & Cloude.)	Waukon, Wis.	Wagons, rubber springs for	Dec. 26, 1865.
46,992	Clough, Samuel G.	Rochester, N. Y.	Balances	Mar. 28, 1865.
47,630	Clum, Henry A.	Coboes, N. Y.	Knitting machine burrs	May 9, 1865.
51,294	Cute, John	Hadley, Mich.	Hay, means for loading	Dec. 5, 1865.
50,456	Cobb, Russell	Lowell, Mass.	Odometers	Oct. 17, 1865.
	Coburn, H. R.			
	Coburn, James, et al. (See Swan, Thomas, assignor.)			
48,154	Coburn, John H.	Lowell, Mass.	Looms, shuttles for	June 13, 1865.
48,481	Coburn, John W., assignor to self and O. F. Case	New Haven, Conn.	Sales, water-proof	June 27, 1865.
50,336	Coburn, Samuel	Stamford, Conn.	Detergents, manufacture of	Oct. 10, 1865.
46,061	Cochran, Alexander	Port Richmond, N. Y.	Beverage	Jan. 31, 1865.
48,519	Cochran, D. M., and A. Gear	Richmond, Ind.	Sticking straw, machine for	July 4, 1865.
47,922	Cochran, John B.	Brooklyn, N. Y.	Valves, slide	May 30, 1865.
47,068	Cochran, John W.	New York, N. Y.	Fire-arm, breech-loading	Apr. 25, 1865.
47,386	Cochran, John W.	Wall Township, N. J.	Fire-arm, breech-loading	Apr. 25, 1865.
46,722	Cochrane, John	Springfield, Ohio	Railway chairs	Sept. 5, 1865.
46,178	Cochrane, William F., assignor to self and Warder & Child	Springfield, Ohio	Harvesters	Jan. 31, 1865.
46,179	Cochrane, William F., assignor to self and Warder & Child	Springfield, Ohio	Harvesters	Jan. 31, 1865.
46,180	Cochrane, William F., assignor to self and Warder & Child	Springfield, Ohio	Harvesters	Jan. 31, 1865.
46,181	Cochrane, William F., assignor to self and Warder & Child	Springfield, Ohio	Harvesters	Jan. 31, 1865.
46,182	Cochrane, William F., assignor to self and Warder & Child	Springfield, Ohio	Harvesters	Jan. 31, 1865.

## List of patentees of inventions, designs, and reissues, 1865—Continued.

No.	Patentee.	Residence.	Invention or discovery.	Date.
46, 183	Cochrane, William F., assignor to self and Warder & Child	Springfield, Ohio	Harvesters	Jan. 31, 1865.
49, 024	Cochrane, William F., assignor to self, B. H. Warder, and J. C. Child.	Springfield, Ohio	Harvesting machines	July 25, 1865.
50, 056	Cochrane, William F., assignor to self, B. H. Warder, and J. C. Child.	Springfield, Ohio	Harvester rakes	Sept. 19, 1865.
50, 906	Codman, Martha P.	Boston, Mass.	Cups, drinking, for the sick	Nov. 14, 1865.
51, 295	Codrus, Jasper G.	Port Richmond, N. Y.	Windlass for tightening ships' standing rigging	Apr. 4, 1865.
50, 222	Coe, Orson A.	Charlestown, Ohio	Tanning, process for	Oct. 3, 1865.
47, 397	Coe, William	Worcester, Mass.	Horseshoe	Apr. 25, 1865.
49, 023	Coffee, Earl D.	Hollatown, Mass.	Boots	Sept. 5, 1865.
51, 107	Coffin, David N. B., Jr., assignor to self and J. D. Spaulding	Boston, Mass.	Captain, power	Nov. 21, 1865.
48, 370	Coffin, George	Jamaica Plain, Mass.	Anchor	Nov. 27, 1865.
49, 233	Coffin, George	Boston, Mass.	Steering apparatus	Aug. 8, 1865.
50, 688	Cogan, Joseph	Boston, Mass.	Strapping or clasp	Oct. 31, 1865.
49, 607	Cogswell, William	Ottawa, Ill.	Harvesters	Aug. 29, 1865.
49, 608	Cogswell, William	Ottawa, Ill.	Harvesters	June 20, 1865.
52, 007	Cogswell, William, and Ira, Jr., assignors through mesne assigns to William Cogswell and William H. H. Cushman.	Ottawa, Ill.	Harvesters	June 20, 1865.
46, 993	Colahan, Samuel	Cleveland, Ohio	Baling, machine for cutting and preparing hay for	Mar. 28, 1865.
51, 295	Colburn, Levi H.	Chicago, Ill.	Propeller, screw	Dec. 5, 1865.
51, 509	Colburn, E. T., assignor to self and William P. and Isaac Gannett	Boston, Mass.	Clothes sprinkler	Dec. 12, 1865.
45, 909	Colburn, G. F. J.	Newark, N. J.	Combs	Jan. 17, 1865.
46, 082	Colburn, G. F. J.	Newark, N. J.	Combs	Jan. 31, 1865.
46, 296	Colburn, G. F. J., assignor to James T. and Horace A. Pratt	Newark, N. J.	Coat and hat hook	Feb. 7, 1865.
1, 997	Colburn, G. F. J., assignor to James T. and Horace A. Pratt	New York, N. Y.	Coat and hat hook	June 13, 1865.
1, 862	Colburn, G. F. J., assignor to James T. and Horace A. Pratt	Norwich, Conn.	Engines, steam, supplemental valves for	Feb. 7, 1865.
48, 155	Colburn, Richard, and L. W. Hanson	Claremont, N. H.	Fertilizers to growing plants, implement for distributing	June 13, 1865.
48, 156	Colby, Daniel C.	Claremont, N. H.	Sifter, flour	June 13, 1865.
48, 520	Colby, Daniel C.	New York, N. Y.	Sifter, flour	July 4, 1865.
47, 489	Colby, Daniel C., assignor to self, D. W. Rawson, J. Redding, and T. I. Harris	Claremont, N. H.	Heating and fuel-saving devices	Apr. 25, 1865.
1, 991	Colby, George J.	Waterbury, Vt.	Willow, machine for peeling	June 13, 1865.
1, 992	Colby, George J.	Waterbury, Vt.	Rubber, India, rolls to metallic shafts, mode of fastening. (Re-issue.)	June 13, 1865.
48, 907	Colby, George J.	Waterbury, Vt.	Carpet, flooring or dust rack for	July 25, 1865.
48, 908	Colby, George J.	Waterbury, Vt.	Window shutters	July 25, 1865.
48, 909	Colby, George J.	Waterbury, Vt.	Latch, knob	July 25, 1865.
49, 983	Colby, Hall	New York, N. Y.	Compound, lubricating, for journal boxes, &c.	Sept. 19, 1865.
50, 337	Cole, A. H.	Sylvania, Ohio	Buckle	Oct. 10, 1865.
46, 779	Cole, Benjamin	Brooklyn, N. Y.	Safe, money	Mar. 14, 1865.
	Cole, James A., and Albert Moore. (See Moore & Cole.)			
	Cole, Job H., and Malcolm Campbell. (See Campbell & Cole.)			
	Cole, Lewis L., and Walter W. Jerome. (See Jerome & Cole.)			
48, 910	Cole, Sylvanus	Pawtucket, R. I.	Clothes-dryer	July 25, 1865.

51, 147	Colomann, Ambrose, II. (See Higgins, H. B., assignor.)	Lyndenville, N. Y.	Yoke, neck.	Nov. 24, 1865.
48, 157	Colomann, E. C., et al. (See Higgins, H. B., assignor.)	Providence, R. I.	Rings, ellmah, machine for making.	June 13, 1865.
46, 337	Colomann, J. A.	Philadelphia, Pa.	Nuts, machines for making.	Feb. 14, 1865.
50, 907	Colomann, James E. (See Kellogg, E. C. C., assignor.)	Newark, N. J.	Potash, prussiate of, retorts for the manufacture of.	Nov. 14, 1865.
47, 333	Colomann, James E. (See Kellogg, E. C. C., assignor.)	Fort Jervis, N. Y.	Hook, chain.	Apr. 11, 1865.
48, 996	Colomann, James E. (See Kellogg, E. C. C., assignor.)	Poughkeepsie, N. Y.	Harvesting machines.	July 11, 1865.
46, 996	Colomann, John H.	Cannonsburg, Pa.	Carpet stretcher.	Mar. 21, 1865.
51, 298	Colman, W., & Sons, et al. (See Gladding, Henry C., assignor.)	Wayne, Mich.	Weather strips, for doors.	Dec. 5, 1865.
46, 043	Collins, I. M.	New Bedford, Mass.	Car brakes.	Mar. 7, 1865.
51, 148	Collins, John J. G.	Philadelphia, Pa.	Pumps, deep-well.	Nov. 28, 1865.
50, 338	Collins, M. Grier, assignor to H. Reley and H. H. Hartsock.	Cumberland, Md.	Paddle wheel, feathering.	Oct. 10, 1865.
49, 964	Collins, Michael H.	Chelsea, Mass.	Lamps.	Sept. 19, 1865.
51, 021	Collins, Michael H.	Chelsea, Mass.	Amalgamator.	Nov. 21, 1865.
49, 305	Collins, Owen.	New York, N. Y.	Glas, illuminating, apparatus for making.	Aug. 22, 1865.
50, 097	Collins, Thos. A., Josiah D. Evans, and Thomas J. Sm-dil-y	Smyrna, Del.	Tiles, drain, machine for making.	Sept. 26, 1865.
Release.				
46, 883	Colquitt, C. A., et al. (See Ritterhoff, Colquitt, & Mulchahey.)	Sardinia, N. Y.	Gates, flood, for mill dams.	Mar. 21, 1865.
46, 594	Colton, Martin.	Philad-elphia, Pa.	Mitkers, cow.	Mar. 28, 1865.
50, 457	Colvin, L. O.	Philadelphia, Pa.	Breast pumps.	Oct. 17, 1865.
47, 069	Colvin, L. O.	Macedonia, Ohio.	Railroad switches.	Apr. 4, 1865.
1, 884	Colwell, J. W.	Troy, N. Y.	Bridges, truss. (Release.)	Feb. 28, 1865.
Comstock, A. M., and A. C. G. Rathburn. (See Rathburn & Comstock.)				
46, 995	Comstock, Cicero.	Milwaukee, Wis.	Spader, rotary.	Mar. 28, 1865.
50, 223	Conant, A. F.	Southland, N. Y.	Saw-mills.	Oct. 3, 1865.
48, 659	Condell, John.	Morris-town, N. Y.	Arms, artificial.	July 11, 1865.
48, 660	Condell, John.	Morris-town, N. Y.	Legs, artificial.	July 11, 1865.
48, 792	Condell, John.	Morris-town, N. Y.	Legs, artificial.	July 16, 1865.
Release.				
48, 521	Concett, N. W., and D. S. Steele. (See Stevens, Wm. J., assignor.)	Middletown, Conn.	Lathe, chuck for.	July 4, 1865.
48, 521	Cone, S. J.	Yorktown, N. Y.	Scales, platform.	Apr. 4, 1865.
49, 826	Conklin, James H.	Cookingville, N. Y.	Leather water proof, process for rendering.	Sept. 5, 1865.
Conkling, C., assignor to Caroline A. Conklin.				
50, 339	Conkling, Theodore. (See Funnell, William, assignor.)	Bloomington, Ill.	Stoves, cooking.	Oct. 10, 1865.
50, 098	Connel, Wm. F., and Wm. M. Slikman. (See McClave, Wm., as'or.)	Winnington, Del.	Supporter, sail.	Sept. 28, 1865.
51, 510	Conner, William.	Winnington, Del.	Steam generators.	Dec. 12, 1865.
48, 661	Conner, William.	Evansville, Ind.	Wool bending machines.	July 11, 1865.
47, 151	Conner, John, assignor to self and Wm. G. Pennypacker.	Boston, Mass.	Weaving fabrics with button-holes therein, mode of.	Apr. 4, 1865.
46, 083	Conor, Edward O., and Philip Keenan. (See Keenan & Connor.)	Chesham, Ill.	Roller and corn planer, combined.	Jan. 31, 1865.
48, 754	Conrad, Peter.	Philadelphia, Pa.	Pitcher, ice.	Sept. 3, 1865.
50, 340	Conrad, Charles.	Chicago, Ill.	Wagon boxes, casing skins of.	Oct. 10, 1865.
46, 662	Conradine, Thomas.	New York, N. Y.	Ripping sutures in cloth, instrument for.	July 11, 1865.

## List of patentees of inventions, designs, and reissues, 1865—Continued.

No.	Patentee.	Residence.	Invention or discovery.	Date.
49,086	Converse, William F.	Harrison, Ohio.	Car springs, railroad.	Aug. 1, 1865.
47,690	Converse, William H.	Newcastle, Maine.	Harrow and roller combined.	Apr. 4, 1865.
49,722	Conwell, W. C.	Wilmington, Del.	Piston rods, packing-rings for.	Sep. 5, 1865.

No.	Patentee.	Residence.	Invention or discovery.	Date.
46,886	Dickey, Adam.	Cincinnati, Ohio.	Knapack supporter.	Mar. 21, 1865.
47,805	Dickey, Julia C.	Saratoga Springs, N. Y.	Drills, rock.	May 23, 1865.
48,914	Dickey, Julius C.	Saratoga Springs, N. Y.	Drills, rock.	July 25, 1865.
	Dickey, Julius C.	Saratoga Springs, N. Y.	Drying fruit and other articles, revolving frames for. (Extended.)	May 16, 1865.
47,191	Dickinson, E. M.	Fitchburg, Mass.	Boots and shoes, machine for holding the uppers of.	Apr. 11, 1865.
51,703	Dickinson, Samuel C. (See Tuter, David B., assignor.)	Reading, Pa.	Filters and coolers.	Dec. 26, 1865.
48,532	Dickson, William P.	Seranton, Pa.	Coal breaker.	July 4, 1865.
49,864	Dickson, John A.	Seranton, Pa.	Railroad rule.	Sept. 12, 1865.
48,533	Diehl, Charles A. (See Groves, F., assignor.)	New York, N. Y.	Washstand appliances for one-armed persons.	July 4, 1865.
	Dietrich, Gustave.	Norwalk, Ohio.	Saws.	Dec. 5, 1865.
	Dietrich, E. T., and Waldron J. Cheyney. (See Cheyney & Dietrich.)			
51,385	Dillingham, Hiram P., assignor to M. O. Waggoner and George P. Roberts.	Falmouth, Ky.	Ploughs.	Sept. 5, 1865.
49,733	Dills, Kern & Co. (See Leeper & Kidder, assignors.)	Syracuse, N. Y.	Car brakes.	Aug. 8, 1865.
49,243	Dinmock, Samuel R.	Flournoe, Mass.	Cotton, &c., machine for combing.	Sept. 12, 1865.
49,865	Dinmock, Ira.	New York, N. Y.	Engines, steam.	Feb. 21, 1865.
1,877	Dimpfel, Frederick P.	New York, N. Y.	Engines, steam.	Aug. 29, 1865.
	Dimpfel, Frederick P.	Montreal, Canada.	Alarm, fire.	Jan. 31, 1865.
49,686	Dion, Charles.	San Francisco, Cal.	Horse-shoe.	Apr. 4, 1865.
	Dirks, R., et al. (See Christy, James, assignor.)	Philadelphia, Pa.	Saw, cross-cut, method of attaching handles to.	Jan. 24, 1865.
46,087	Diabrow, William.	Philadelphia, Pa.	Saw-setting machine.	May 23, 1865.
47,093	Diabrow, William.	Philadelphia, Pa.	Seal and desk, school.	Dec. 12, 1865.
45,980	Disaton, Charles.	Philadelphia, Pa.	Seal and desk, school.	Dec. 12, 1865.
47,806	Disaton, Charles.	Philadelphia, Pa.	Saw, cross-cut, method of attaching handles to.	Dec. 12, 1865.
	Disaton, Henry. (See Baker, John G., assignor.)	Philadelphia, Pa.	Paper pulp, apparatus for the manufacture of.	Dec. 12, 1865.
51,430	Dixon, John W.	Philadelphia, Pa.	Paper pulp, apparatus for the manufacture of.	Dec. 12, 1865.
51,431	Dixon, John W.	Philadelphia, Pa.	Paper pulp, apparatus for the manufacture of.	Dec. 12, 1865.
51,432	Dixon, John W.	Philadelphia, Pa.	Paper pulp, apparatus for the manufacture of.	Dec. 12, 1865.
51,433	Dixon, John W.	Philadelphia, Pa.	Paper pulp, apparatus for the manufacture of.	Dec. 12, 1865.
51,568	Dixon, John W.	Philadelphia, Pa.	Paper pulp, apparatus for the manufacture of.	Dec. 12, 1865.
51,569	Dixon, John W.	Philadelphia, Pa.	Paper pulp, apparatus for the manufacture of.	Dec. 12, 1865.
51,570	Dixon, John W.	Philadelphia, Pa.	Paper pulp, apparatus for the manufacture of.	Dec. 12, 1865.
51,571	Dixon, John W.	Philadelphia, Pa.	Paper pulp, apparatus for the manufacture of.	Dec. 12, 1865.
51,572	Dixon, John W.	Philadelphia, Pa.	Paper pulp, apparatus for the manufacture of.	Dec. 12, 1865.
51,704	Dixon, John W.	Philadelphia, Pa.	Paper pulp, apparatus for the manufacture of.	Dec. 12, 1865.
51,705	Dixon, John W.	Philadelphia, Pa.	Paper pulp, apparatus for the manufacture of.	Dec. 12, 1865.
51,706	Dixon, John W.	Philadelphia, Pa.	Paper pulp, apparatus for the manufacture of.	Dec. 12, 1865.
	Doane, Charles R.	Spotswood, N. J.	Washstand appliances for one-armed persons.	Nov. 7, 1865.
50,808	Doane, William H.	Cincinnati, Ohio.	Saw, fruit, stopper for.	Jan. 24, 1865.
48,161	Doane, William H.	Cincinnati, Ohio.	Saw, fruit, stopper for.	Jan. 24, 1865.
49,384	Doane, William H., assignor to self and J. A. Fay & Co.	Cincinnati, Ohio.	Sawing machine, scroll.	Aug. 22, 1865.
	Doane, William H., assignor to self and J. A. Fay & Co.	Cincinnati, Ohio.	Journal box.	Aug. 22, 1865.

46,533	Dobhins, Jacob.....	Litchfield, Mich.....	Hoop cutting and bending.....	July 4, 1863
46,611	Dodd, Levia C., and Robert Walsh.....	Three Rivers, Mich.....	Carriage tops.....	Aug. 20, 1863
46,636	Dodd, William B., assignor to self and Niel Macneale.....	Cincinnati, Ohio.....	Locks.....	Mar. 14, 1863
47,193	Dodge, Heskiah.....	Albany, N. Y.....	Presses.....	Apr. 11, 1863
51,513	Dodge, Hiram S., assignor to J. W. Doty.....	Lockport, N. Y.....	Connecting-rod couplings.....	Dec. 12, 1863

## List of patentees of inventions, designs, and reissues, 1865—Continued.

No.	Patentee.	Residence.	Invention or discovery.	Date.
46, 523	Doty, J. W. (See Dodge, Hiram S., assignor.)	Warren, Ill.	Drill, grain. (Antedated February 6, 1863)	Feb. 21, 1865.
49, 844	Donblair, J. W. H., assignor to self and John E. Wynne.	Great Britain.	Fire-arm, breech-loading. (Patented in England April 15, 1864.)	Sept. 5, 1865.
47, 538	Dougherty, Horace F. (See Ingersoll, F. C., assignor.)	Paterson, N. J.	Railroad rails, lock joint for.	May 2, 1865.
48, 263	Dougherty, Aaron	Lowell, Mass.	Washing machine.	June 20, 1865.
50, 364	Douglas, Erasmus	Lazearie, Pa.	Railroad switch.	Oct. 24, 1865.
50, 807	Douglas, George	Scranton, Pa.	Car spring.	Nov. 7, 1865.
48, 783	Dougherty, J. H.	New York, N. Y.	Box, blacking.	Mar. 14, 1865.
46, 999	Dougherty, J. H.	New York, N. Y.	Clothes dryer.	Mar. 28, 1865.
46, 229	Dove, Samuel H. (See Draper, James, assignor.)	Boston, Mass.	Bread and meat slicer.	Feb. 7, 1865.
48, 381	Dow, N. M. (See Gauger, Samuel F., assignor.)	Boston, Mass.	Wagons	June 27, 1865.
46, 646	Dow, N. M. (See Bundy, Nelson H., assignor.)	Syracuse, N. Y.	Filters, water. (Antedated February 27, 1865)	Mar. 7, 1865.
48, 796	Downer, Wm. P. (See Archer, Wm., assignor.)	Paterson, N. J.	Cloth, hair and grass, machine for preparing wool for the manufacture of.	July 18, 1865.
51, 436	Downie, James	Paterson, N. J.	Trusses	Dec. 12, 1865.
51, 108	Downing, William H.	Delavan, Wis.	Cloth, the web of which is made of hair, grass, &c.	Nov. 31, 1865.
47, 194	Downing, George, and Nathaniel Grant. (See Grant & Downs.)	Philadelphia, Pa.	Wells, apparatus for withdrawing tubes from.	Apr. 11, 1865.
50, 921	Doyle, Edwin S.	Sharon, Conn.	Steak, beef, crusher.	Nov. 14, 1865.
47, 255	Drake, Edwin B.	Portland, Maine	Saw	Apr. 11, 1865.
51, 155	Drake, Francis B.	Chicopee, Mass.	Shoes	Nov. 28, 1865.
48, 195	Drake, Maxwell D.	Providence, R. I.	Spinning frame, upper bearings or bolsters for spindles of.	Apr. 11, 1865.
48, 129	Drake, Oliver F. (See Mihan, Patrick, assignor.)	Newark, N. J.	Iron, and	June 6, 1865.
2, 046	Drake, Robert, assignor to self and J. F. and D. F. Bliss.	Clinton Township, N. J.	Skirt, skeleton	Aug. 1, 1865.
2, 083	Drake, Robert, assignor to self and Leonard E. Downie.	North Attleboro', Mass.	Dies for stamping sheet	Sept. 5, 1865.
50, 200	Draper, Virgil, assignor to Oscar M. Draper.	North Attleboro', Mass.	Chain links, devices for averaging.	Sept. 29, 1865.
51, 437	Draper, W. P.	North Attleboro', Mass.	Steady po. plates, devices for casting.	Sept. 12, 1865.
48, 763	Draper, Wm. W., assignor to self and Alonzo Parker.	Attleboro', Mass.	Tool stock	July 1, 1865.
51, 435	Dravburgh, Daniel.	Greenville, Mass.	Nail-plate feeders.	Dec. 19, 1865.
49, 724	Dreher, B., and Wm. J. Kinard. (See Kinard & Dreher.)	Detroit, Mich.	Wagons, releasing the tailboards of.	Sept. 5, 1865.
51, 309	Dreher, Caspar.	Detroit, Mich.	Screw-thread cutting tool.	Nov. 7, 1865.
50, 103	Dreher, Caspar.	Detroit, Mich.	Bolt cutter	Nov. 7, 1865.
47, 623	Dreman, C. H.	Boston, Mass.	Air, apparatus for carburizing	Sept. 29, 1865.
47, 623	Drew, Gubbins. (See Glass, Chapman E., assignor.)	Dixon, Ill.	Boots, pattern for cutting	May 9, 1865.
	Drew, Reuben W. (See Goddard, Louisa, assignor.)			

46, 605	Drieslein, Charles L.	Chicago, Ill.	Hay forks	July 11, 1905.
46, 764	Driggs, Spencer H.	New York, N. Y.	Cars, railroad, running gear for	Mar. 14, 1905.
47, 360	Driggs, Spencer H.	New York, N. Y.	Plum-boring	Apr. 11, 1905.
47, 361	Driggs, John P.	New York, N. Y.	Sault, marsh and swamp, mode of reclaiming	June 27, 1905.
48, 613	Driver, John P.	Muncie, Ind.	Means, means for earthing	Aug. 26, 1905.
50, 606	Driver, John P.	Muncie, Ind.	Boiler feeders, automatic	Oct. 31, 1905.
50, 649	Driver, Samuel, assignor to self and Edward Longan	Philadelphia, Pa.	Hinges, shifter	Sept. 12, 1905.
46, 384	Drummond, Chas. H. (See Small, George G., assignor.)	Allegheny, Pa.		June 30, 1905.
50, 585	Dryden, William A. and James H. Montgomery	Monmouth, Ill.	Mill-stone, dressing, machine for	Oct. 24, 1905.
45, 819	Dubber, J. Frederick	Brooklyn, N. Y.	Book, pocket	Jan. 10, 1905.
47, 684	Dubernet, L.	New York, N. Y.	Stand, portfolio	May 9, 1905.
45, 913	Du Bois, John	Williamsport, Pa.	Gates, food, revolving	Jan. 17, 1905.
50, 439	Duboung, V.	Germany	Burners, gas	Oct. 10, 1905.
46, 965	Duboung, A.	Baltimore, Md.	Petroleum, apparatus for distilling	June 20, 1905.
51, 156	Duboung, A.	Baltimore, Md.	Petroleum, process for distilling	Nov. 22, 1905.
47, 167	Duck, John H., and Edwin S. Gould	Elgin, Ill.	Washing machine	Apr. 4, 1905.
2, 018	Duckworth, Christopher	Mt. Carmel, Conn.	Looms	July 4, 1905.
2, 019	Duckworth, Christopher	Mt. Carmel, Conn.	Looms, power, harness motion for	July 4, 1905.
45, 086	Duckworth, Christopher	Mt. Carmel, Conn.	Press, hydraulic, portable	Aug. 1, 1905.
49, 097	Dudgeon, Richard	New York, N. Y.	Jack, hydraulic	Aug. 1, 1905.
46, 796	Dudson, Hawthorne & Brothers (See Hawthorne, Thos., as or.)	Philadelphia, Pa.	Plas dentists' machines for bending	Mar. 14, 1905.
49, 016	Duff, William A., and Jethro P. Griffith	Quincy, Ill.	Collars, paper	Mar. 30, 1905.
46, 088	Duff, William L., assignor to Henry C. Banks	New Orleans, La.	Petroleum, reorts for distilling	Jan. 31, 1905.
46, 089	Duffin, George H.	New Orleans, La.	Petroleum, reorts for distilling	Jan. 31, 1905.
46, 090	Duffin, George H.	New Orleans, La.	Petroleum, reorts for distilling	Jan. 31, 1905.
50, 992	Dugdale, James K.	Richmond, Ind.	Washing machines	Nov. 21, 1905.
50, 511	Dunmer, Samuel R.	New York, N. Y.	Measure and tunnel, combined	June 27, 1905.
46, 511	Dunmer, Samuel R.	New York, N. Y.	Hinges	Aug. 24, 1905.
50, 566	Dunmer, Samuel R.	New York, N. Y.	Hinges	Oct. 19, 1905.
51, 438	Dunmer, Elijah F.	Cummins, Ohio	Root, reel	Dec. 19, 1905.
49, 266	Dunbar, Edwin	Buffalo, N. Y.	Engine, steam, piston for	June 30, 1905.
50, 099	Dunbar, Henry D.	Springfield, Mass.	Plasma, steam, metallic packing for	July 19, 1905.
50, 687	Dunbar, Robert	Springfield, Mass.		Oct. 31, 1905.
46, 456	Dunbar, Robert (See Worcester, Josh H., assignor.)	Aurora, Ill.	Lock for car seat	Feb. 21, 1905.
51, 571	Duncan, Asa, and John M. Zeigler	West Milton, Ohio	Safe, meat	Dec. 19, 1905.
46, 647	Duncan, George & d. (See Skinner, Duncan & Merritt.)	Syracuse, N. Y.	Hay, machines for raking and loading	Mar. 7, 1905.
50, 231	Duncan, Albert S.	Taunton, Mass.	Stoves, cook	Oct. 3, 1905.
48, 383	Dunham, D. M. (See Webb, Albion, assignor.)	Unionville, Conn.	Net machine	June 27, 1905.
48, 393	Dunham, George	Unionville, Conn.	Net machine (Antedated July 1, 1905)	Nov. 14, 1905.
50, 462	Dunham, Henry Jr.	Ablington, Mass.	Shoe, sewed	Oct. 17, 1905.
51, 157	Dunham, Robert Jr.	Ablington, Mass.	Sawing machine	Nov. 28, 1905.
50, 577	Dunham, Robert	Porter, Me.	Ladders	Oct. 24, 1905.
48, 384	Dunlap, Robert	New York, N. Y.	Hats	June 27, 1905.
46, 795	Dunlap, Benjamin F.	Galesburg, Ill.	Presses, hay and cotton	Mar. 14, 1905.
47, 283	Duncomb, Edward	Boston, Mass.	Piston-rods, guide for	Apr. 12, 1905.

*List of patentees of inventions, designs, and reissues, 1865—Continued.*

No.	Patentee.	Residence.	Invention or discovery.	Date.
47, 679	Duncombe, Edward, assignor to Wm. F. Perkins and L. L. Fuller.	Boston, Mass.	Air, apparatus for carburetting	May 9, 1865.
50, 104	De Pout, Lamnot	Wilmington, Del.	Gunpowder, plates for pressing	Sept. 26, 1865.
50, 568	De Pout, Lamnot	Wilmington, Del.	Gunpowder, presses for pressing	Oct. 24, 1865.
51, 106	Dwyer, Chas. F., assignor to self, J. Benz, and J. Hackert.	Bridgeport, Conn.	Ivory, artificial	Nov. 21, 1865.
47, 549	Dwyer, Chas. F.	New York, N. Y.	Iron and steel directly from the ore, manufacture of	Feb. 28, 1865.
46, 987	Dunlap, George W.	Norfolk, Va.	Boiler tubes, ferrules for	Sept. 13, 1865.
50, 180	Dunn, Francis	France	Gins, cotton	Sept. 13, 1865.
50, 300	Duraud, John H., assignor to E. P. H. Gondouin.	Kalamazoo, Mich.	Bedstead, folding	Oct. 3, 1865.
46, 550	Durant, A. P., and D. M. Buckley	Atlanta, Ill.	Cultivator, wheel	Feb. 28, 1865.
	Durbin, John C., and Miles K. Lewis. (See Lewis & Durbin.)			
	Durbin, John C., et al. (See Lewis, Durbin & Lewis.)			
	Durfee, Z. S. (See Griffiths, John, assignor.)			
46, 301	Durra, Henry	New York, N. Y.	Engines, rotary	Aug. 15, 1865.
48, 385	Dutree, George	New York, N. Y.	Ink, printing, manufacture of	June 27, 1865.
48, 207	Dutrieple, William	Malden, Mass.	Pipe-couplings	July 15, 1865.
50, 541	Dutrieple, Victor	France	Engines, steam, stuffing-boxes for	Oct. 15, 1865.
9, 047	Dutton, Rufus	New York, N. Y.	Harvesters	Aug. 5, 1865.
2, 079	Dutton, Rufus, assignor, through mesne assignments, to self and Richard L. Allen.	New York, N. Y.	Mowing machines	Oct. 3, 1865.
50, 343	Dutton, Thomas, and Thomas Maguire	Port Jervis, N. Y.	Wells, pipes or tubes for	Oct. 10, 1865.
48, 798	De Vergis, H. A. G. (See Mills, M. J. A., assignor.)	Dorchester, Mass.	Nails, horsehoe, machine for making	July 18, 1865.

46, 223	Eada, James B.	St. Louis, Mo.	Guns, and gun-turret, operating	Feb. 7, 1865.
46, 342	Eada, James B.	St. Louis, Mo.	Ordnance, operating	Feb. 14, 1865.
	Eagle Aircraft and Steam Manufacturing Company. (See Tracy, Ed. H., assignor.)			
46, 551	Earl, Benjamin A.	Philadelphia, Pa.	Wool, lubricant for	Feb. 28, 1865.
47, 938	Earl, B. A., and Earl, Henry	Media, Pa.	Wool, apparatus for oiling	May 30, 1865.
47, 001	Earle, Jonathan H.	Philadelphia, Pa.	Saw press	Apr. 25, 1865.
49, 627	Earle, John F., assignor to J. P. Lindsey	Philadelphia, Pa.	Pipe, current, machine for making	Nov. 7, 1865.
45, 920	Earle, Oscar T.	Scranton, Pa.	Engines, steam, valves for	Sept. 5, 1865.
46, 887	Earle, Timothy	Scranton, Pa.	Engines, steam, valves for	Sept. 10, 1865.
48, 016	Earle, John W.	Wills, Pa.	Sifters, flour	Mar. 21, 1865.
48, 534	Eastman, John	Lowell, Mass.	Washing, D. C.	July 25, 1865.
49, 867	Eastbrook, M.	Washington, D. C.	Metal plates, machine for bending	July 4, 1865.
46, 081	Eastman, Henry W.	Geneva, N. Y.	Harrows	Sept. 12, 1865.
	Eastman, John E. (See Fanketh, James, assignor.)	Baltimore, Md.	Crib and cradle	Jan. 31, 1865.
47, 402	Eastwick, Edward F.	Baltimore, Md.	Syrup and saccharine solutions, process for treating	Apr. 25, 1865.
46, 648	Eaton, Calvin	Webster, N. Y.	Ladder, extension	Mar. 7, 1865.

48,968	Faton, D. C., et al. (See Arnold, Alfred, assignor.)	Boston, Mass.	Spinning machines.	Sept. 19, 1865.
48,969	Faton, James.	Stoughton, Iowa.	Spinning machines.	July 25, 1865.
48,970	Faxon, Richard, and John A. Hotchkiss. (See Hotchkiss & Faxon.)	Madison, Pa.	Process of producing coloring matter for	Mar. 21, 1865.
48,971	Faxon, Richard, William	Philadelphia, Pa.	Wool-carding machines, machinery for	Apr. 11, 1865.
47,197	Fby, John.	Trenton, Ohio.	Warner foot	May 16, 1865.
47,767	Fecher, James, assignor to self and Robert Kordlaw.	Lodi, Wis.	Vinegar manufacture of	Mar. 28, 1865.
46,649	Fecher, Augustus.	Racine, Wis.	Cars, platform, stake-holders for	Nov. 28, 1865.
51,159	Feddy, Edwin A.	Racine, Wis.	Cars, platform, stake-holders for	July 18, 1865.
48,799	Feddy, Edwin A.	Brooklyn, N. Y.	Stove-pipe thimble.	July 18, 1865.
48,800	Feddy, Edwin A.	Jersey City, N. J.	Stove-pipe thimble.	Nov. 14, 1865.
50,924	Feddy, Samuel, and Peter H. Jackson. (See Jackson & Eddy.)	Spiceland, Ind.	Retorta, clay, decarboxizing	Sept. 19, 1865.
48,989	Feddy, Samuel.	St. Vernon, Ohio	Evaporator, cane-juice	Aug. 15, 1865.
49,392	Edgerton, Walter.	Boston, Mass.	Churns	July 11, 1865.
48,666	Edmunds, C. L. (See Brodhead, Wessel, assignor.)	Stowe, Mass.	Pumps, ships'	Aug. 15, 1865.
49,393	Edmunds, John L. (See Bull, Daniel, assignor.)	Kokomo, Ind.	Game boards	Apr. 23, 1865.
47,491	Edson, James T., assignor to self and Geo. L. Crosby	Cambridge, Ill.	Collar, horse	Mar. 28, 1865.
47,492	Edson, Samuel B.	Cambridge, Ill.	Vessels, stunken, &c., indicator for raising	July 4, 1865.
48,539	Edson, Temperance P.	Madison, Ill.	Hygrometers	July 4, 1865.
48,540	Edson, William, assignor to Shedd and Edson.	Chicago, Ill.	Ice-cream freezer	Nov. 23, 1865.
48,620	Edwards, Albert W.	Chicago, Ill.	Ice-cream freezer	Nov. 23, 1865.
51,160	Edwards, Albert W.	Chicago, Ill.	Kidicator, heat	July 4, 1865.
48,540	Edwards, Alfred.	Boston, Mass.	Traps, animal	Sept. 3, 1865.
49,735	Edwards, Alfred.	Boston, Mass.	Range, heating and cooking	May 16, 1865.
47,706	Edwards, Eben.	Zanesville, Ohio	Lamp burners	May 9, 1865.
47,825	Edwards, Giles, and Robert Thomas. (See Thomas & Edwards.)	Brooklyn, N. Y.	Awls	Apr. 25, 1865.
47,403	Egan, James P.	Brooklyn, N. Y.	Burnishers, shoemakers	Apr. 25, 1865.
51,439	Egan, Richard.	Wenatchee, Wash.	Seeding machines	Dec. 14, 1865.
46,889	Eggleston, Leonard, assignor to Rumsey & Co	St. Louis, Mo.	Pump, chain or well, stock of a	Mar. 21, 1865.
2,183	Eggleston, Leonard, assignor to Rumsey & Co	St. Louis, Mo.	Seeding machines	Mar. 21, 1865.
50,344	Eben, John C.	New York, N. Y.	Pump, chain or well, stock of a	Oct. 10, 1865.
46,322	Eckemeyer, Rudolph.	New York, N. Y.	Has bodies, machine for punching and napping	Oct. 10, 1865.
46,322	Eckemeyer, Rudolph.	New York, N. Y.	Has bodies, machine for punching and napping	Feb. 29, 1865.
46,353	Eckstrand, G., and N. P. Cusack.	New York, N. Y.	Has bodies, machine for punching and napping	Feb. 29, 1865.
49,312	Elder, H. L., and S. H. Kennedy. (See Fields and Townsend, assignors.)	Walaga, Ill.	Cultivators	Aug. 22, 1865.
48,763	Elder, H. L., and S. H. Kennedy. (See Fields and Townsend, assignors.)	Walaga, Ill.	Cultivators	Aug. 22, 1865.
48,763	Elder, James H., et al. (See Gray, Joshua, assignor.)	Walaga, Ill.	Cultivators	Aug. 22, 1865.
48,890	Eldredge, E. H., et al. (See Gray, Joshua, assignor.)	Walaga, Ill.	Cultivators	Aug. 22, 1865.
49,014	Eldridge, David.	Philadelphia, Pa.	Fly-wheels. (Antedated March 6, 1865)	Mar. 21, 1865.
51,028	Eldridge, David.	Philadelphia, Pa.	Gearing belt, anti-friction wheels for	Aug. 20, 1865.
47,686	Eldridge, John.	West Point, Me.	Pumps. (Antedated July 17, 1865.)	Nov. 21, 1865.
47,686	Eley, Philip.	New York, N. Y.	Bricks, producer for	Apr. 21, 1865.
47,894	Ellers, A.	Boston, Mass.	Stud, elastic, for doors	Jan. 24, 1865.
50,345	Elliman, James.	Providence, R. I.	Buckles, shoe	Oct. 10, 1865.
50,345	Ellerby, John. (See Moore, Thomas, assignor.)	Providence, R. I.	Buckles, shoe	Oct. 10, 1865.

## List of patentees of inventions, designs, and reissues, 1865—Continued.

No.	Patentee.	Residence.	Invention or discovery.	Date.
51,029	Elliswood, Harrison C.	Garrettsville, Ohio	Saws, planman for. (Antedated November 18, 1865)	Nov. 21, 1865.
51,574	Elliot, J. W.	Leicester, Mass.	Stoves, fire-lighting attachments for	Dec. 19, 1865.
46,555	Elliot, Wm. H.	Plattsburg, N. Y.	Fire-arms, revolving	Feb. 7, 1865.
47,372	Elliot, Wm. H.	Plattsburg, N. Y.	Fire-arms, breech-loading	Apr. 18, 1865.
47,539	Elliot, Wm. H.	Plattsburg, N. Y.	Stoves, kerosene	May 2, 1865.
47,550	Elliot, Wm. H.	Plattsburg, N. Y.	Pumps, oil	May 2, 1865.
47,707	Elliot, Wm. H.	Plattsburg, N. Y.	Fire-arms, revolving, cylinder pin for	May 16, 1865.
47,849	Elliot, Wm. H.	Plattsburg, N. Y.	Fire-arms, breech-loading	May 23, 1865.
50,232	Elliot, Wm. H.	Illon, N. Y.	Fire-arms, many-barrelled	Oct. 3, 1865.
1,936	Elliot, Wm. H.	Plattsburg, N. Y.	Fire-arms, many-barrelled (Release)	Apr. 18, 1865.
1,937	Elliot, Wm. H.	Plattsburg, N. Y.	Fire-arms, revolving (Division 2, of release)	Apr. 18, 1865.
1,938	Elliot, Wm. H.	Plattsburg, N. Y.	Fire-arms, revolving (Division 3, of release)	Apr. 18, 1865.
51,440	Elliot, Wm. H.	Illon, N. Y.	Fire-arms, many-barrelled	Dec. 12, 1865.
48,056	Ellis, Darwin, and George R. Stetson.	New Haven, Ct.	Cartridges, machines for attaching balls to	June 6, 1865.
46,557	Ellis, John R.	Comp. F. 22d reg't, Wis.	Engines, rotary	Feb. 21, 1865.
48,801	Ellison, James.	Boston, Mass.	Boot and shoe holder	July 18, 1865.
48,735	Ellis, E. F.	Dayton, Ohio	Paper bags, machine for making	Sept. 5, 1865.
46,918	Ellis, Josiah W.	Pittsburg, Pa.	Iron, sheet, annealing and polishing. (Antedated July 12, 1865)	July 23, 1865.
50,569	Elmer, Albert F.	Springfield, Mass.	Dampers	Oct. 24, 1865.
51,030	Elmer, Charles R.	Philadelphia, Pa.	Mill-stone pick	Nov. 21, 1865.
43,915	Elmer, William.	New York, N. Y.	Gas, illuminating, manufacture of. (Patented in France Decem-ber 5, 1864.)	Jan. 17, 1865.
2,082	Elmore, M. H.	Buffalo, N. Y.	Stand, monte	June 13, 1865.
50,105	Eltinge, Edgar	Kington, N. Y.	Lamp chimney, moulding	Sept. 26, 1865.
46,850	Elvaus, John R., et al. (See Bryant, Wm. M., assignor.)	South Norwalk, Ct.	Latches	Mar. 7, 1865.
49,513	Elwell, Henry H.	Gardiner, Me.	Earth pulverizer	Aug. 22, 1865.
	Elwell, William			
	Ely, Alfred B. (See Gwynn, Stuart, assignor.)			
	Ely, Alfred B. (See Hallon, Francis D., assignor.)			
	Ely, Alfred B. (See Hallon, Francis D., assignor.)			
	Ely, Alfred B. (See Brown, J. H., assignor.)			
	Ely, Alfred B. (See Fessenden, Abijah, assignor.) Release.			
51,575	Ely, Dan. J.	Acton, Ind.	Planters, corn	Dec. 19, 1865.
49,246	Embree, Davis	Philadelphia, Pa.	Knives, table	Aug. 8, 1865.
43,914	Emerrick, D. B., and E. Pincus. (See Pincus & Emerrick.)	Dayton, Ohio	Boilers, method of removing incrustation from	Jan. 17, 1865.
	Emerson, E., et al. (See Pratt, Ira C., assignor.)			
50,980	Emerson, George, and Abram J. Gibson. (See Gibson & Emerson.)	Lowell, Mass.	Sewing machines for working button-holes	Nov. 14, 1865.
49,689	Emerson, James, assignor to self and Charles D. McDonald	Trenton, N. J.	Saws, saw-teeth for	Sept. 12, 1865.
46,092	Emery, J. E.	New York, N. Y.	Turpentine, spirits of, oil, rosin, and other products from pine wood, obtaining	Jan. 31, 1865.
	Emery, A. H.	New York, N. Y.	Acid, pyroigneous, manufacture of	Aug. 8, 1865.
49,247	Emery, A. H.	New York, N. Y.		

40, 548	Emery, A. H.	New York, N. Y.	Pitch, manufacture of	Aug. 4, 1865.
40, 549	Emery, A. H.	New York, N. Y.	Twisting, manufacture of	Aug. 4, 1865.
40, 590	Emery, Charles A.	Springfield, Mass.	Clutch or rope holder	Sept. 19, 1865.
47, 384	Emery, Charles W.	Brooklyn, N. Y.	Valves, slide, balanced	Apr. 18, 1865.
48, 881	Emery, Charles W.	Bordentown, N. J.	Animals, machines for clipping hair or wool from	Jan. 10, 1865.
46, 326	Emery, Charles W.	Bordentown, N. J.	Animals, machines for clipping hair or wool from	Feb. 7, 1865.
48, 709	Emery, Charles W.	Bordentown, N. J.	Pipe coupling	July 11, 1865.
46, 683	Emery, William B.	Springfield, Ill.	Savo tongs	Jan. 31, 1865.
47, 636	Emmen, Samuel	Albany, N. Y.	Gins, cotton. (Antedated May 5, 1865.)	May 9, 1865.
46, 094	Emmanuel, Charles	Philadelphia, Pa.	Sweeping machine, street	Jan. 31, 1865.
48, 954	Emmerson, Joseph	France	Astronomical instruments	Jan. 17, 1865.
48, 386	Enders, V.	Louisville, Ky.	Carriage tops	June 19, 1865.

50,701	Frey, Joseph.	Chicago, Ill.	Brush, scrubbing, mop and wringer.	Oct. 31, 1865.
47,711	Frey, Jacob, and John Hahn.	Philadelphia, Pa.	Patenting shutter.	Oct. 10, 1865.
49,620	Frick, Jacob.	Philadelphia, Pa.	File, newspaper.	May 30, 1865.
50,235	Frick, Jacob.	Cincinnati, Ohio.	Fire plugs.	Oct. 3, 1865.
48,711	Friedrich, Jacob F. M. (See Hahner, Joseph, assignor.)	Cincinnati, Ohio.	Alcohol, &c., distillation of.	July 11, 1865.
51,710	Frink, E. Otho.	Indianapolis, Ind.	Latch, gate.	Dec. 28, 1865.
51,711	Frink, Samuel O.	Indianapolis, Ind.	Hinge.	Dec. 28, 1865.
48,336	Frish, Russell.	Middletown, Conn.	Tackle, hook.	June 20, 1865.
46,854	Frout, J. P., & d. (See Field, L. C. assignor.)	Springfield, Mass.	Lighters, gas, electric. (Announced July 24, 1865.)	Aug. 6, 1865.
48,764	Frout, J. P., & d. (See Field, L. C. assignor.)	Worcester, Mass.	Skirt wire, covered, sising and finishing.	July 11, 1865.
48,765	Frout, W. E., assignor to J. Washburn and F. L. Moon.	Worcester, Mass.	Skirt wire, covered, sising and finishing.	July 11, 1865.
48,766	Frout, W. E., assignor to J. Washburn and F. L. Moon.	Worcester, Mass.	Skirt wire, covered, sising and finishing.	July 11, 1865.
51,303	Fry, Jeremiah T., and Amos Melot. (See Melot & Fry.)	Philadelphia, Pa.	Flank.	Dec. 5, 1865.
46,746	Fry, William T.	Brooklyn, N. Y.	Engine, traction, for common roads.	Sept. 5, 1865.

45,009	Fulter, Dwight B.	Buffalo, N. Y.	Pumps, piston packing for.	Jan. 24, 1865.
50,119	Fulter, Eugene C.	Lowell, Mass.	Knife scraper.	Sept. 23, 1865.
47,811	Fulter, George W. (See Falcon, Peter E., assignor.)	Pawtucket, R. I.	Key, watch, manufacturing.	May 2, 1865.
49,343	Fulter, George W., assignor to self and Peter E. Falcon.	Chelsea, Mass.	Vase, machine for preparing.	Aug. 19, 1865.
51,633	Fulter, Jim B., assignor to self, J. P. Upham, and E. V. Rice.	Claremont, N. H.	Press, machine for preparing.	Dec. 19, 1865.
47,536	Fulter, Jim B., and James P. Upham.	Claremont, N. H.	Hemp, flax, &c., for spinning, preparing.	May 2, 1865.
47,539	Fulter, Jim B., and James P. Upham.	Claremont, N. H.	Hemp, flax, &c., process for separating the fibres of. (Ante-dated April 18, 1865.)	May 2, 1865.
46,893	Fulter, Joseph G.	New York, N. Y.	Paper stock, engine for preparing.	Mar. 21, 1865.
	Fulter, L. L., and William F. Perkins. (See Duncomb, Edward, assignor.)			
47,508	Fulter, Robert P., assignor to Henry Richmond.	Machias, Maine	Pulley block.	May 2, 1865.
47,368	Fulter, Warren & Co. (See Hathaway, David, assignor.) Design.	Great Britain.	Doors and windows, water-tight method of rendering. (Patented in England February 16, 1864.)	Apr. 18, 1865.
48,547	Fulton, Andrew	Pittsburg, Pa.	Piston packing.	July 4, 1865.
49,396	Fulton, Isaac	Madison, Pa.	Fodder, machine for cutting and grinding.	Aug. 19, 1865.
50,236	Fulton, James	Zanesville, Ohio	Boot and shoe, wooden sole.	Oct. 3, 1865.
47,689	Funnell, Henry	Huntington, N. Y.	Trees, remedy for disease in.	Apr. 4, 1865.
47,411	Furbush, C. O.	Machias, Maine	Printing presses, apparatus for delivering paper from.	Apr. 25, 1865.
	Furbush, M. A., and G. Crompton. (See Brown, Edward W., assignor.) Reissue.			
47,100	Furlong, E. P., and E. M. Lang	Westbrook, Maine	Wicks, incombustible, mode of rendering.	Apr. 4, 1865.
	Furnalds and Clark. (See White, Robert, assignor.)			
47,492	Furst, Conrad, and David Bradley. (See Lacy, John, assignor.)	Winona, Minn.	Engines, steam, valve gear of.	Apr. 25, 1865.
50,313	Guar, A., and D. M. Cochran. (See Cochran & Gear.)	Dowagiac, Mich.	Drills, grain, seed covers for.	Aug. 1, 1865.
	Gage, Benjamin. (See Reynolds, Edwin, assignor.)	England.	Gunpowder, mode of keeping. (Patented in England June 22, 1865.)	Oct. 3, 1865.
48,268	Gage, Chapman E., assignor to Columbia Drew	Washington, D. C.	Coffee, process for preparing. (Ante-dated June 12, 1865.)	June 20, 1865.
48,269	Gale, L. D.	Sterling, Ill.	Seeding machine and cultivator.	June 20, 1865.
1,977	Gale, Warren, assignor to self and B. B. Belcher	Chicopee Falls, Mass.	Straw cutters.	May 30, 1865.
2,137	Gale, Warren, assignor to self and B. B. Belcher	Chicopee Falls, Mass.	Straw cutters.	Dec. 19, 1865.
48,673	Gale, Warren and Andrew. (See Macomber, A. S., ass'r.) Reissue.	St. Louis, Mo.	Cocks.	July 11, 1865.
51,304	Gallagher, Joseph P.	Dover Plains, N. Y.	Washing machine.	Dec. 5, 1865.
51,304	Gallahue, A. C.	Salem, Mass.	Churns.	Apr. 18, 1865.
47,292	{ Gallup, A. O., and E. A. Hewitt	New London, Conn.	Washing machine.	Jan. 24, 1865.
	Galpin, G. W., and E. Ashdown. (See Ashdown & Galpin.)			
45,990	Gambell, Squire	Otisco, N. Y.	Washing machine.	Jan. 24, 1865.
	Gamble, David R., and Frank J. Roth. (See Roth & Gamble.)			
	Gannett, William R., and Isaac. (See Colburn, E. T., assignor.)			
	Gannon, Thomas. (See Webster, Thomas B., assignor.)			
	Gannon, Thomas. (See Webster, Thomas B., assignor.)			
	Gannon, Thomas. (See Webster, Thomas B., assignor.)			
48,017	Ganrage, Samuel F., assignor to self and N. M. Dow.	Boston, Mass.	Tong, pipe.	May 30, 1865.
48,167	Gaster, George P., assignor to William Foster.	New York, N. Y.	Shells, explosive, concussion fuse for. (Ante-dated June 9, 1865.)	June 13, 1865.
50,237	Gawdy, John G., and Jacob J. Lavo	St. Louis, Mo.	Boilers, composition for removing incrustation from.	Oct. 3, 1865.
45,991	Gardner, Ell P.	New York, N. Y.	Ores, apparatus for desulphurizing and amalgamating.	Jan. 24, 1865.

*List of patentees of inventions, designs, and reissues, 1865—Continued.*

No.	Patentee.	Residence.	Invention or discovery.	Date.
46,461	Gardner, Eli P.	New York, N. Y.	Quartz, &c., machinery for breaking	Feb. 21, 1865.
49,747	Gardner, J. (See Monroe, Joshua, assignor.)	Springfield, Mass.	Shirt bosoms, paper	Sept. 5, 1865.
46,462	Gardner, Joseph B.	New York, N. Y.	Quartz crushers	Feb. 21, 1865.
46,789	Gardner, Perry G.	New York, N. Y.	Quartz crushers	Mar. 14, 1865.
50,113	Gardner, Bela, and Edwin F. Miller. (See Miller & Gardner.)	Freedom, Ohio	Drying frames, fruit	Sept. 26, 1865.
47,293	Gardner, Edward M.	Nantucket, Mass.	Disperser, smoke-pipe	Apr. 18, 1865.

50,587	Horton, James, and John Martina, assignors to Stuart Peterson.	Philadelphia, Pa.	Stove, plates of a.	Nov. 21, 1865.
50,049	Horton, Marcus L., assignor to Hyduoy Smith.	Clarendon, N. H.	Stove, mechanical soap.	Nov. 21, 1865.
50,071			Stove, cooking.	Sept. 19, 1865.

50,073	Horton, Marcus L., assignor to Sydney Smith.	Claremont, N. H.	Harps, sock.	Sept. 10, 1865.
47,234	Horton, Martin.	Brooklyn, N. Y.	Gauges, carpenters.	May 23, 1865.
50,002	Horton, S. E. (See Chase, John, assignor.)			
46,906	Horton, William Henry			
47,652	Horton, W. W.			
2,160	Hoeler, William.			
46,176	Homer, George, assignor to self and J. R. Winch.			
	Hotchkie, Bennet. (See Shattuck, Henry, assignor.)			
47,544	Hotchkie, Bennet.	New York, N. Y.	Shells, explosive.	May 2, 1865.
47,725	Hotchkie, B. B.	New York, N. Y.	Projectiles for rifled ordnance, packing.	May 16, 1865.
50,337	Hotchkie, B. B.	New York, N. Y.	Projectiles for rifled ordnance, packing.	Oct. 10, 1865.
50,397	Hotchkie, Horace	Pinefield, N. J.	Umbrellas.	Oct. 24, 1865.
2,121	Hotchkie, James	Springfield, Ohio.	Brick machine.	Dec. 5, 1865.
51,050	Hotchkie, James, and Ezra Bus.	Springfield, Ohio.	Brick machine.	Nov. 21, 1865.
46,814	Hotchkie, John A., and Richard Eaves.	Derby, Conn.	Washer, dish.	July 18, 1865.
	Hotchkie Sons. (See Marsh, Clark, assignor.)			
	Hottelstein, H. P. (See Temple, James, assignor.)			
46,360	Hotz, Nikola.	Brooklyn, N. Y.	Pumps.	Feb. 14, 1865.
47,307	Houchin, Thomas W.	Morrisania, N. Y.	Gas instrument for lighting.	Apr. 11, 1865.
50,825	Hough, Earl F.	Marinez, Cal.	Wind wheels.	Nov. 7, 1865.
51,051	Houghton, Charles, and Robert S. Lewis.	Attica, N. Y.	Wells, tube, reservoir drill for.	Nov. 21, 1865.
47,726	House, Henry M.	Washington, D. C.	Tables, &c., movable joint for.	May 16, 1865.
46,177	House, James A. and Henry A.	Bridgeport, Conn.	Chair.	June 13, 1865.
46,947	House, James A. and Henry A.	Bridgeport, Conn.	Mowing machines, lawn.	July 25, 1865.
49,758	House, James A. and Henry A.	Bridgeport, Conn.	Boring braces.	Sept. 5, 1865.
	House, Mark H., and John M. Perkins. (See Perkins & House.)			
48,408	House, Mark H., and John M. Perkins. (See Perkins & House.)	Binghamton, N. Y.	Telegraphs, electro-phonetic. (Patented in England July 21, 1864.)	June 27, 1865.
	House, Royal E.			
49,270	Hoyer, H. M.	New York, N. Y.	Stair rod.	Aug. 8, 1865.
	Hovey, Edwin S. (See Coolidge, John G. W., assignor.)			
2,231	Hovey, Francis.	New York, N. Y.	Press, letter, arch of s.	Dec. 12, 1865.
51,183	Hovey, J. G.	Waverly, Iowa.	Pumps.	Nov. 28, 1865.
50,598	Hovey, Samuel D.	Chicago, Ill.	Fuel, artificial.	Oct. 24, 1865.
	How, Timothy. (See Chase, Aaron, Jr., assignor.)			
46,404	Howard, Benjamin	New York, N. Y.	Ambulances.	June 27, 1865.
50,125	Howard, Charles	New York, N. Y.	Fire-arms, breech-loading.	Sept. 26, 1865.
50,358	Howard, Charles	New York, N. Y.	Fire-arms, breech-loading.	Oct. 10, 1865.
50,196	Howard, G. W.	Pontiac, Mich.	Transporting oil, &c., tanks for.	Sept. 26, 1865.
46,067	Howard, Henry L.	Westfield, Mass.	Heating, steam, boiler for.	June 6, 1865.
51,456	Howard, Hiram L.	Mendon, Mich.	Tire-upsetting machine.	Dec. 12, 1865.
46,070	Howard, James L.	Hartford, Conn.	Stove-pipe dampers.	Mar. 7, 1865.
51,319	Howard, Michael	Virginia City, Nevada.	Hair restorative.	Dec. 5, 1865.
	Howard, Rufus L. (See Johnston, Samuel, assignor.)			
	Howard, Rufus L. (See Johnston, Samuel, assignor.)			
	Howard, William			
50,369	Howe, Amos B., and Smith Gardner. (See Gardner & Howe.)	Middletown, Ohio.	Scissors.	Oct. 24, 1865.
	Howe, Elias, Jr. (See McCurdy, James S., assignor.)			
46,000	Howe, Frederick W.	Providence, R. I.	Fire-arms, rear sight-base for.	Jan. 24, 1865.
46,071	Howe, Frederick W.	Providence, R. I.	Fire-arms, breech-loading.	Mar. 7, 1865.
2,137	Howe, George A.	Brooklyn, N. Y.	Cotton-picker.	Dec. 26, 1865.

## List of patentees of inventions, designs, and reissues, 1865—Continued.

No.	Patentee.	Residence.	Invention or discovery.	Date.
2, 138	Howe, George A.	Brooklyn, N. Y.	Cotton-picker.	Dec. 26, 1865.
48, 068	Howe, Henry	Darlington, Wis.	Cultivators.	June 6, 1865.
48, 067	Howe, J. M.	Portland, Oregon.	Wagon wheels, machines for making.	July 11, 1865.
2, 040	Howe, Josiah. (See Ripet, Edwin S., assignor.)	New York, N. Y.	Scales, bullion, standard of.	Mar. 28, 1865.
1, 938	Howe, Lindsay J., and John V. Boulver.	Boston, Mass.	Dye colors, manufacture of.	May 16, 1865.
1, 939	Howe, Manley, and Henry R. Stevens.	Boston, Mass.	Dye colors, manufacture of.	May 16, 1865.
48, 405	Howell, A. C.	Vienna, N. J.	Beverage.	June 27, 1865.
47, 825	Howell, Benoit H.	New York, N. Y.	Barrels, composition for lining.	May 23, 1865.
45, 716	Howell, Martin R.	Elizabethport, N. J.	Sprues, moulders.	Jan. 3, 1865.
51, 721	Howell, William H.	Elizaville, N. J.	Cultivators.	Dec. 26, 1865.
47, 935	Hoves, A., et al. (See Mason, Melchor B., assignor.)	Boston, Mass.	Crupper.	May 30, 1865.
47, 935	Hoves, S., and H. Montgomery. (See Montgomery & Hoves.)	Boston, Mass.	Crupper.	May 30, 1865.
47, 108	Howland, Edward P.	Worcester, Mass.	Car coupling.	Apr. 4, 1865.
49, 523	Howlett, Charles	Manchester, Conn.	Carriage-boxes, revolving.	Aug. 22, 1865.
46, 605	Howson, Henry, assignor to Stuart & Petersen.	Philadelphia, Pa.	Stoves, gas-burning. (Antedated February 20, 1865).	Feb. 26, 1865.
46, 849	Howson, Henry, assignor to Rock Drill Manufacturing and Mining Company.	Philadelphia, Pa.	Well-boring apparatus.	Mar. 14, 1865.
47, 897	Howson, Henry, assignor to William Wharton, Jr.	Philadelphia, Pa.	Well-boring.	May 23, 1865.
51, 052	Howson, Henry, and William E. Lockwood. (See Lockwood & Howson.)	Philadelphia, Pa.	Well-boring.	May 23, 1865.
50, 127	Hoxsie, David K., and Thomas L. Reed	Providence, R. I.	Tubing, flexible, manufacture of.	Nov. 21, 1865.
48, 489	Hoyt, Edwin.	Stamford, Conn.	Tobacco pipe.	Sept. 26, 1865.
50, 003	Hoyt, L. D., and Robert Murray, assignors to James W. Tufts.	Melford, Mass.	Soda-water apparatus, draught cock for.	June 27, 1865.
51, 569	Hubbard, John A.	Boston, Mass.	Wind wheels.	Sept. 19, 1865.
46, 971	Hubbard, J. M.	West Haven, Conn.	Corn, machine for husking.	Dec. 19, 1865.
49, 524	Hubbard, Orange B., assignor to self, L. J. Smith, and L. J. McMasters.	Lowell, Mass.	Loom.	Mar. 21, 1865.
47, 826	Hubbard, W. W.	Philadelphia, Pa.	Bolta, machines for cutting threads on.	Aug. 22, 1865.
2, 185	Hubbell, George S. and Alfred S.	Derby, Conn.	Japanning, apparatus for.	May 23, 1865.
2, 186	Hubbell, Henry S. and Alfred S.	Buffalo, N. Y.	Stove, cook.	Oct. 10, 1865.
2, 187	Hubbell, Henry S. and Alfred S.	Buffalo, N. Y.	Stove, cook.	Oct. 10, 1865.
2, 188	Hubbell, Henry S. and Alfred S.	Buffalo, N. Y.	Stove, parlor.	Oct. 10, 1865.
2, 189	Hubbell, Henry S. and Alfred S.	Buffalo, N. Y.	Stove, parlor.	Oct. 10, 1865.
51, 184	Hubbell, Laporte.	Bristol, Conn.	Clock movement, frame of a.	Oct. 10, 1865.
50, 710	Hubbell, P., et al. (See Blake, George T., assignor.)	Bristol, Conn.	Clocks, marine.	Nov. 28, 1865.
50, 711	Hubbell, William Wheeler	Philadelphia, Pa.	Oil electors.	Oct. 31, 1865.
47, 491	Huber, Edward	Kelco, Ind.	Shells, incandent.	Oct. 31, 1865.
47, 491	Huober, Emil	New York, N. Y.	Rakes, horse.	Oct. 31, 1865.
47, 491			Rubber, &c., implement for cutting.	Apr. 25, 1865.

51, 316	Habner, Emil, and Charles Hall.....	New York, N. Y.	Nut machines.....	Dec. 5, 1865.
47, 345	Habner, G. (See Kilsenae, Wilhelm, assignor.)			
47, 345	Hadden, James H. W.....	Boston, Mass.	Soap, tomato.....	May 9, 1865.
46, 361	Hudson, Charles H.....	New York, N. Y.	Washboards, attachment for.....	Feb. 14, 1865.
45, 693	Hudson, Edward P.....	Newington, D. C.	Steel, manufacture of.....	Jan. 10, 1865.
50, 138	Hudson, Erasmus D.....	Malton, N. Y.	Steel, manufacture of.....	Sept. 26, 1865.
45, 839	Hudson, Sidney.....	Buffalo, N. Y.	Travelling machine for measured grain.....	Jan. 10, 1865.
46, 336	Hudson, Thomas T.....	East Cambridge, Mass.	Stamp, holder for.....	Feb. 7, 1865.
51, 053	Hudson, Thomas T.....	East Cambridge, Mass.	Stamp, holder for.....	Nov. 21, 1865.
46, 338	Hudson, Thomas S., and Anthony Hardy, assignors to Thomas S. Hudson.....	East Cambridge, Mass.	Stamp, holder for.....	June 20, 1865.
46, 338	Hudson, William S.....	Paterson, N. J.	Valves, safety, device for operating.....	Feb. 7, 1865.
46, 558	Huffer, Abraham. (See Schner, Nathaniel, assignor.)	Hagerstown, Md.	Padlocks.....	July 4, 1865.
	Hughes, F. W. (See Marshall, Leonis G., assignor.)			
1, 943	Hughes, F. W. (See Marshall, Leonis G., assignor.)	Bloomington, Ill.	Fire-arms, magazine or self-loading..... (Release)	May 2, 1865.
49, 409	Hughes, G. W., and J. G. Fussy, assignors to Burnside Rifle Company.....	Providence, R. I.	Fire-arms, magazine.....	Aug. 15, 1865.

48,180	Ilyes, Peter J., and Joseph Neuberger. (See Neuberger & Ilyes.)	Janesville, Wis.	Radiating, heat, attachment for stoves and furnaces	June 13, 1905.
48,948	Illegworth, Joseph Jacob.	Brooklyn, N. Y.	Bollers, cleaning tubes in	July 25, 1905.
47,824	Imley, Charles G., assignor to self and C. C. Lathrop	Philadelphia, Pa.	Jars, fruit	May 23, 1905.
50,301	Imley, William L.	Philadelphia, Pa.	Jars, fruit, holder for	Oct. 3, 1905.
50,199	Inglis, Walter	Philadelphia, Pa.	Churns	Sept. 26, 1905.
47,739	Inglis, Joseph	Sanborn, N. H.	Boats, attachment of trains of. (Antedated Sept. 12, 1903)	Oct. 3, 1905.
48,069	Ingersoll, Platt C.	Millon, Ind.	Drills, grain	Jan. 6, 1905.
50,713	Ingersoll, P. S., assignor to self and Horace F. Dougherty	Greenport, N. Y.	Bed bottom	Oct. 31, 1905.
48,053	Ingersoll, Simon, assignor to self and George H. Keith.	Greenport, N. Y.	Presses	Jan. 24, 1905.
49,022	Ingle, John W., and R. H. Wright.	Stanford, Conn.	Ore crushers	July 23, 1905.
46,675	Ingle, John W., and R. H. Wright.	Livingston, Ill.	Cultivators	Mar. 7, 1905.
49,111	Ingraham, Sanford	Naples, N. Y.	Cultivators	Aug. 1, 1905.
51,055	Ingraham, Sanford	Naples, N. Y.	Cultivators	Nov. 9, 1905.
49,411	Ingram, James	New York, N. Y.	Shutter cases	Aug. 15, 1905.
49,033	Ingram, James D., assignor to G. M. Rice, G. S. Barton, and J. E. Fales.	New York, N. Y.	Steam-pressure gauges	July 25, 1905.
49,525	Ingram, S. D.	Harrisburg, Pa.	Reflector, adjustable fastening for a	Aug. 22, 1905.
51,457	Innis, James W.	Milroy, Ind.	Thill coupling	Dec. 19, 1905.
50,904	Innis, William J., assignor to A. Burgess & Co.	Providence, R. I.	Spinning machines, machines for making paper cop tubes for	Sept. 26, 1905.
50,007	Iron, Andrew	Farmington, Mo.	Stirrup, saddle	Sept. 19, 1905.
46,363	Irvine, John H.	Chicago, Ill.	Lamps and lanterns, burners for	Feb. 14, 1905.
47,256	Irvine, John H.	Chicago, Ill.	Air, apparatus for carburetting	Apr. 11, 1905.
47,257	Irvine, John H.	Chicago, Ill.	Air, apparatus for carburetting	Apr. 11, 1905.
47,551	Irvine, John H.	Chicago, Ill.	Lanterns	May 2, 1905.
48,596	Irvine, John H.	Chicago, Ill.	Air, apparatus for carburetting	Aug. 23, 1905.
50,520	Irvine, John H.	Chicago, Ill.	Air, apparatus for carburetting	Oct. 3, 1905.
50,521	Irvine, John H.	Chicago, Ill.	Air, apparatus for carburetting	Oct. 3, 1905.
50,521	Irvine, John H.	Chicago, Ill.	Lanterns	Oct. 24, 1905.
50,521	Irvine, John H.	Chicago, Ill.	Lanterns	Jan. 10, 1905.
47,850	Irvine, John H., assignor to self and James F. Griffin.	Chicago, Ill.	Air, apparatus for carburetting	Apr. 11, 1905.
47,258	Isbell, Charles W.	New York, N. Y.	Engines, steam	Mar. 14, 1905.
46,800	Isbell, R. H. (See Valentine, John G., assignor.)	New York, N. Y.	Engines, steam	Mar. 14, 1905.

*List of patentees of inventions, designs, and reissues, 1865—Continued.*

No.	Patentee.	Residence.	Invention or discovery.	Date.
47,020	Iseminger, D. H.	Heyworth, Ill.	Sorghum evaporator.	Mar. 20, 1865.
51,056	Isnam, Henry	New Britain, Conn.	Water meter.	Nov. 21, 1865.
49,112	Isnam, H. L.	Plattsburg, N. Y.	Wagons, light.	Aug. 1, 1865.
46,240	Iake, Anthony	Lancaster, Pa.	Table, extension.	Feb. 7, 1865.
49,412	Iake, Anthony	Lancaster, Pa.	Bedstead, hospital.	Aug. 15, 1865.
46,801	Ivers, Alfred	New York, N. Y.	Globes for fishes.	Mar. 14, 1865.
	Iverson, Hans, et al. (See Fostensen, Iversen & Skow.)			
46,471	Ives, James	Mount Carmel, Conn.	Lamps.	Feb. 21, 1865.
48,816	Ives, James	Mount Carmel, Conn.	Lamps.	July 18, 1865.
49,274	Ives, James	Mount Carmel, Conn.	Lanterns.	Aug. 8, 1865.
49,630	Ives, James	Mount Carmel, Conn.	Cattle tie.	Aug. 29, 1865.
49,413	Ives, James O.	St. Louis, Mo.	Digger, potato.	Aug. 15, 1865.
46,070	Ives, John G.	Springfield, Ill.	Valves, slide.	June 6, 1865.
47,357	Jackman, John, Jr., assignor to the American Stop-motion Co.	Newburyport, Mass.	Engines, steam, automatic stop-motion for	Apr. 18, 1865.
47,358	Jackman, John, Jr., assignor to the American Stop-motion Co.	Newburyport, Mass.	Engines, steam, automatic stop-motion for	Apr. 18, 1865.
51,189	Jackson, Andrew P., and Leander Thompson	Memphis, Ind.	Drilling machine.	Nov. 26, 1865.
46,109	Jackson, Benjamin	Trenton, N. J.	Pottery ware, safeguard for protecting	Jan. 31, 1865.
50,592	Jackson, Charles, and J. G. Pusey	Providence, R. I.	Cartridges, metallic, priming	Oct. 24, 1865.
49,739	Jackson, Charles H.	Angola, N. Y.	Wells, deep, piston packing for	Sept. 5, 1865.
51,057	Jackson, Charles H.	St. Louis, Mo.	Clothes dryer	Nov. 21, 1865.
49,113	Jackson, Henry	New York, N. Y.	Locks	Aug. 1, 1865.
46,241	Jackson, Henry	Brooklyn, N. Y.	Stair-rod fastening	Feb. 7, 1865.
47,422	Jackson, Henry (See Ott, W. Adolph, assignor.)	Brooklyn, N. Y.		Apr. 25, 1865.
51,458	Jackson, James	Woonsocket, R. I.	Woodgear, machines for cutting	Dec. 12, 1865.
48,292	Jackson, Peter H.	New York, N. Y.	Windlass	June 30, 1865.
46,110	{ Jackson, Peter H., and Samuel Eddy	New York, N. Y.	Windlass	Jan. 31, 1865.
49,275	Jackson, Pickmore	Brooklyn, N. Y.	Lastra	
50,360	Jackson, Pickmore	Saugus, Mass.	Boot and shoe upper, machine for cutting	Aug. 8, 1865.
45,830	Jackson, Samuel	Philadelphia, Pa.	Cartridges. (Antedated January 3, 1865.)	Oct. 10, 1865.
50,130	Jackson, Silas T.	Sheboygan Falls, Wis.	Wagon wheels, machines for drawing	Jan. 10, 1865.
50,543	Jackson, Silas T.	Sheboygan Falls, Wis.	Chuck, self-centring	Sept. 26, 1865.
	Jackson, Thomas B. (See Webber, Nathaniel B., assignor.)			Oct. 24, 1865.
50,131	Jackson, William, and Frank Robinson	New York, N. Y.	Washing machine.	Sept. 26, 1865.
46,004	Jacob, Fritz	New York, N. Y.	Propeller, screw.	Jan. 24, 1865.
50,714	Jacob, Fritz	New York, N. Y.	Propeller.	Oct. 31, 1865.
	Jacobs, Lionel. (See Hicks, Alonzo, assignor.)			
	Jacobs, M. G. and F. H. (See Brown, William, assignor.)			
1,992	Jaeger, William H. (See Boyden, Seth, assignor.)	Baltimore, Md.	Oils and gases, condensing and separating	Mar. 14, 1865.
49,881	James, Christopher R.	Jersey City, N. J.	Woodgear, machines for cutting	Mar. 19, 1865.
51,060	James, F. H., and N. B. Gatchell	Lancaster, N. Y.	Pencil clamping. (Antedated November 8, 1865.)	Nov. 21, 1865.

James, Ira	47, 953	James, William H.	Mattoon, Ill.	Process hay and cotton.	May 9, 1865.

2, 031	Keeler, Joel F.	July 18, 1865.	ing. (Reissue.)
48, 181	Keeler, Samuel	June 13, 1865.	Wood-bending machines
47, 109	Keeler, W. F.	Apr. 4, 1865.	Governors
46, 344	Keen, J. M. and G. W. (See Robbins, Richard C., assignor.)	Feb. 7, 1865.	Alkaline solutions, apparatus for evaporating and calcining
50, 937	Keenan, Philip, and Edward O'Connor	Nov. 14, 1865.	Furnace, puddling. (Antedated August 26, 1865.)
45, 835	Keener, George A.	Jan. 10, 1865.	Paddle-wheel, feathering
49, 416	Keener, Charles H.	Aug. 15, 1865.	Boilers, steam, scale borer for
49, 631	Keeney, Fielding H., and Jas. A. Craven. (See Craven & Keeney.)	Aug. 29, 1865.	Cheese-curd cutters
48, 182	Keese, R.	June 13, 1865.	Churns
50, 928	Keith, Albert	Nov. 7, 1865.	Ploughs, sulky
49, 866	Keith, Eli, and Barclay Thorne	Sept. 12, 1865.	Tanning, composition for
48, 681	Keith, George H. (See Ingersoll, Simon, assignor.)	July 11, 1865.	Pumps
50, 008	Kelch, Horace M.	Sept. 19, 1865.	Shoe-lacing
49, 887	Kelch, Timothy J.	Sept. 12, 1865.	Ice, manufacture of
49, 190	Keller, Charles M., and James Henderson	Aug. 1, 1865.	Bedstead sofa
46, 364	Keller, Francis	Feb. 14, 1865.	P anters, seed
50, 140	Keller, John F.	Sept. 26, 1865.	Drills, wheat
46, 565	Keller, Moses A.	Feb. 26, 1865.	Harvesters, rakes for
48, 671	Keller, Sebastian, assignor to self and Jacob L. Good	July 19, 1865.	Seeders and cultivator, combined
51, 728	Kelly, L. W.	Dec. 26, 1865.	Steel springs, &c., compound for tempering
46, 563	Kellogg, Clement A.	July 4, 1865.	Planters, corn
51, 995	Kellogg, D.	Dec. 19, 1865.	Washing machine
44, 183	Kellogg, D. C.	June 13, 1865.	Clothes-dryer
47, 868	Kellogg, D. C., assignor to self and James E. Coleman	May 23, 1865.	Screw-cutting dies, stocks for holding
47, 869	Kellogg, E. C. C., assignor to self and James E. Coleman	May 23, 1865.	Tool for opening boxes
47, 958	Kellogg, George D.	May 30, 1865.	Strap, shoulder, slide
50, 420	Kellogg, Henry, assignor to self and Wallace & Sons	Oct. 10, 1865.	Springs, flat wire
50, 716	Kellogg, J. M.	Oct. 31, 1865.	Tire-shrinking machine
46, 678	Kellogg, O. W.	Mar. 7, 1865.	Broom
49, 888	Kellogg, Smith M. (See Burr, Theodore, assignor.)	Sept. 12, 1865.	Window blinds, machine for wiring
	Kelly, Daniel		
	Kelly, De Milt & Co. (See Boardman, Horace, assignor.)		

## List of patentees of inventions, designs, and reissues, 1865—Continued.

No.	Patentee.	Residence.	Invention or discovery.	Date.
47, 427	Kelly, James	Troy, N. Y.	Wool machine for piling.	Apr. 25, 1865.
46, 111	Kelly, Oliver A., and Eastus Lamb	Slatersville, R. I.	Engine, steam, governors.	Jan. 31, 1865.
46, 112	Kelly, Robert	Tuecia, Ill.	Gates	Jan. 31, 1865.
50, 938	Kelly, Thomas J.	New York, N. Y.	Stoves, gas-burner for	Nov. 14, 1863.
51, 388	Kelsey, Albert, assignor to self and Amos Brown	Charlestown, Mass.	Lathes, prism	Dec. 5, 1863.
48, 953	Kelsey, Edward	Centre Brook, Conn.	Paper knife handle.	July 23, 1863.
47, 734	Kelly, Gibbons L.	New York, N. Y.	Window-shades	May 16, 1863.
51, 896	Kemp, John	Brooklyn, N. Y.	Mills, grinding	Dec. 19, 1863.
50, 939	Kona, John	Brooklyn, N. Y.	Bedstead, sofa, extension	Nov. 14, 1863.
46, 692	Kendall, Edwin	New Lebanon, N. Y.	Piston packing	July 11, 1863.
	Kendall, F. O., et al. (See Shaw, Samuel J., assignor.)			
50, 717	Kendall, George F., and Albert Tyler. (See Tyler & Kendall.)	New York, N. Y.	Furnace for treating ores.	Oct. 31, 1863.
50, 718	Kendrick, W.	New York, N. Y.	Furnaces, reverberatory	Oct. 31, 1863.
51, 331	Kendrick, W.	New York, N. Y.	Blowers, fan	Dec. 5, 1863.
45, 995	Kennedy, John C.	Logansport, Ind.	Straw cutters	Jan. 17, 1863.
46, 475	Kenslon, Orin, and Andrew J. McClary	Lawrence, Mass.	Looms, friction mechanism for the warp beam of	Feb. 21, 1863.
49, 632	Kennedy, S. H., and H. L. Elder. (See Fields & Townsend, assignors.)	Baltimore, Md.	Window shutters.	Aug. 29, 1863.
	Kennedy, S. H., and H. L. Elder. (See Fields & Townsend, assignors.)			
45, 836	Kennedy, Thomas	Branford, Conn.	Door-knobs, screwing the necks to	Jan. 10, 1863.
50, 009	Kennelly, James. (See Kieffer, Antons, assignor.)	Livermore, Me.	Churns	Sept. 19, 1863.
50, 829	Kent, Edward R. (See Wadhams, Edward, assignor.)	Battle Creek, Mich.	Marble-finishing machine.	Nov. 7, 1863.
	Kenworthy, T. L., et al. (See Silvers, Aaron, assignor.)	Kora, Ill.	Notis, washers, machine for making.	(Extension).
49, 533	Kepner, Benjamin H., assignor to self and A. L. Brink		Threshing machines.	Aug. 22, 1863.
	Kern, Wm., and B. H. McNally. (See McNally & Kern.)			
47, 532	Kershaw, Robert. (See Eccles, James, assignor.)	Bloomfield, N. J.	Toy	May 2, 1863.
46, 954	Ketcham, H. C.	Washington, D. C.	Mails and packages on railroad cars, mode of receiving and delivering.	July 23, 1863.
	Ketcham, William Jay	Penn Yan, N. Y.	Corn sheller. (Antedated January 29, 1865)	Feb. 7, 1865.
46, 945	Ketchum, Charles			
	Kiefer, Francis D. (See Thorpe, James E., assignor.)			
46, 339	Kidder, Z. B., and R. A. Leeper. (See Leeper & Kidder.)	Buffalo, N. Y.	Screw engines, devices for releasing.	June 30, 1863.
47, 829	Kieffer, Antons, assignor to self and James Kennelly	New Brunswick, N. J.	Knitting machines. (Patented in France January 6, 1864.)	May 17, 1863.
50, 875	Kilbourn, Edward E.	Waterloo, Iowa	Air engines, hot	Nov. 21, 1863.
51, 060	Kilbourn, Hiram, assignor to self and Sylvester P. Babcock	Brooklyn, N. Y.	Current for steam engines	Feb. 26, 1865.
46, 946	Kilgour, J. H.	Killed Brook, N. Y.	Washing machine	Dec.
51, 400	Kiln, Patrick	Mount Hilyear, Ohio		

46, 739	King, Josiah, assignor to self and A. Kilmer	Harrisville, N. Y.	Ploughs	Mar. 7, 1865.
47, 813	Kimball, William A., and Andrew J. Lawrence	Philadelphia, Pa.	Arm-acting	July 25, 1865.
48, 817	Kimball, J. W., and	Superville, Ill.	Machinery, tr. adies for operating	Jan. 10, 1865.
47, 836	John Mahady	Boston, Mass.	Supporters, shouder	May 23, 1865.
49, 131	Kimball, Philip II.	Cambridge, Mass.	Planters, corn	Aug. 1, 1865.
49, 278	Kimball, Wm. B.	Prophetstown, Ill.	Stoves, cooking	Aug. 8, 1865.
46, 845	Kimball, Wm. H.	Peterboro', N. H.	Shoe-shanking machine	Mar. 14, 1865.
48, 683	Kimney, E. D., and Caleb Wright	Lynn, Mass.	Glass cases, construction of	July 11, 1865.
48, 684	Kindleberger, T. J.	Philadelphia, Pa.	Water wheels	July 11, 1865.
49, 534	Kindley, Joel	Springfield, Ohio	Sorghum evaporator	Oct. 24, 1865.
50, 610	King, Charles A., and Otis A. Smith	Middletown, Conn.	Washers, tools for cutting	Aug. 24, 1865.
47, 959	King, D. A., and V. N. Gardener	Lexington, Ky.	Vehicles, attaching and detaching tops of	Oct. 24, 1865.
47, 553	King, George W.	Greenville, N. Y.	Rakes, hay, horse	May 30, 1865.
47, 624	King, Gideon	Evansville, Ky.	Drills, wheat	May 30, 1865.
51, 267	King, H. A., and N. H., and F. S. Walker	Nebraska, Ohio	Beehives	May 30, 1865.
48, 955	King, J. D.	Chelmsford, Ohio	Pressing tobacco, machine for	Oct. 17, 1865.
48, 889	King, James M.	Quincy, Minn.	Reapers, binding attachment to	Sept. 12, 1865.
49, 793	King, Kendall W., and Thos. C. Hargrave. (See Hargrave & King.)	Boston, Mass.	Railroad rail joints	Sept. 5, 1865.
49, 523	King, L.	East Cleveland, Ohio	Lighting-rods, joints for	Aug. 29, 1865.
50, 601	King, Samuel U.	Windsor, Vt.	Wood, machine for bending	Oct. 24, 1865.
	King, Sidney D., and Benjamin P. Lamason. (See Lamason & King.)			
51, 322	King, Watson	Springfield, Ill.	Rakes, horse	Dec. 5, 1865.
51, 530	King, William	Hopewell, New Brunswick	Penman's assistant	Dec. 12, 1865.
47, 428	King, Wm. Heakell	Troy, N. Y.	Chuck, universal	Apr. 25, 1865.
48, 553	King, William H.	Philadelphia, Pa.	Engines, oscillating	July 4, 1865.
50, 141	King, W. H. L.	Princeton, Iowa	Cultivators	Sept. 26, 1865.
	King, Wm. S., et al. (See Blackie, John, assignor.)			
45, 723	Kingham, John W.	North Bridgewater, Mass.	Roofing	Jan. 3, 1865.
47, 629	Kinman, Ira	Prospert, Ill.	Gates, farm, hanging and latching	Apr. 25, 1865.
46, 355	Kinman, Seth	Humboldt, Cal.	Rifeman, arm supporter for	Feb. 14, 1865.
47, 110	Kinward, William J., and B. Dreber	Cleveland, Ohio	Melodeon	Apr. 4, 1865.
50, 142	Kirne, Charles W.	Cortland, N. Y.	Well-tubers, mode of sinking	Sept. 26, 1865.
51, 192	Kiusey, J. L.	South Easton, Pa.	Railroad turn-table	Nov. 28, 1865.
49, 417	Klar, Joseph	West Meriden, Conn.	Lanterns	Aug. 15, 1865.
47, 111	Klar, Hyman	Thornbury, Pa.	Stove-pipe dampers	Apr. 4, 1865.
46, 411	Kirby, Anthony	Brooklyn, E. D., N. Y.	Kettle, tea	June 27, 1865.
	Kirby, William A. (See Osborne, David M., assignor.)			
51, 193	Kirby, William A.	Newark, N. J.	Telegraphs, magnetic	Nov. 28, 1865.
51, 951	Kirchof, Charles	Newark, N. J.	Telegraphs, magnetic	Nov. 28, 1865.
45, 926	Kirchof, Charles, assignor to self and Leonard I. Sleafly	Hamilton, Ohio	Sod-cutter	Jan. 17, 1865.
48, 279	Kirk, William A. L.	Hamilton, Ohio	Sawing machines	Aug. 8, 1865.
48, 818	Kirk, William A. L.	Somerville, Mass.	Roofing brackets	July 18, 1865.
48, 956	Kirkpatrick, Charles A.	Somerville, Mass.	Paddle-wheel	July 25, 1865.
48, 890	Kirkpatrick, Charles A.	Cleveland, Ohio	Chimney-caps	Sept. 12, 1865.
51, 661	Kirkwood, J. H.	Cleveland, Ohio	Car coupling	Dec. 12, 1865.
51, 661	Kirkwood, George L.	Philadelphia, Pa.	Bed-bottom, spring	Oct. 17, 1865.
51, 961	Kistler, Samuel P.	Brooklyn, N. Y.	Bed-bottom, spring	Nov. 21, 1865.
47, 735	Kittelman, W. W.	Bloomfield, Iowa	Hame fastening	May 16, 1865.

## List of patentees of inventions, designs, and reissues, 1865—Continued.

No.	Patentees.	Residence.	Invention or discovery.	Date.
46, 262	Lighthall, Wm. A.	New York, N. Y.	Boilers, steam, feed water heaters for.	Feb. 7, 1865.
46, 263	Lighthall, Wm. A.	New York, N. Y.	Condenser cases.	Feb. 7, 1865.
46, 264	Lighthall, Wm. A.	New York, N. Y.	Condensers.	Feb. 7, 1865.
46, 438	Lighthall, Wm. A.	New York, N. Y.	Condensers and refrigerators.	Feb. 14, 1865.
1, 878	Lighthall, Wm. A.	New York, N. Y.	Condensers. (Belaine)	Feb. 21, 1865.
1, 879	Lighthall, Wm. A.	New York, N. Y.	Condensers, potable water.	Feb. 21, 1865.
47, 434	Lighthall, A. P.	Boston, Mass.	Inhaling vapors, apparatus for.	Apr. 25, 1865.
50, 722	Lighthall, A. P.	Boston, Mass.	Syringes, cathartical.	Oct. 31, 1865.
47, 964	Lichter, Samuel N. (See Myers, James, assignor.)	Baltimore, Md.	Tobacco pipe.	May 30, 1865.
49, 282	Liller, Frederik.	Troy, N. Y.	Safes, fire-proof.	July 11, 1865.
51, 125	Lille, Lewis.	Troy, N. Y.	Locks.	Aug. 8, 1865.
2, 112	Lille, Lewis.	Troy, N. Y.	Safes, vaults, and similar structures, metal, moulds for casting.	Nov. 21, 1865.
50, 769	Lille, Lewis.	Troy, N. Y.	Safes, construction of.	Nov. 21, 1865.
	Lincoln, Annes A., assignor to Annes A. Lincoln, Jr.	Troy, N. Y.	Furnaces, cupola.	Oct. 31, 1865.
	Lincoln, J. H. and S. et al. (See Hammon, T. W., assignor.)	New Haven, Conn.		
51, 465	Lindsey, J. P. (See Earle, John E., assignor.)	Washington, Pa.	Wrench.	Dec. 12, 1865.
50, 014	Lindsey, J. P. (See Goodwin, William, assignor.)	Montville, Conn.	Hands, artificial.	Sept. 10, 1865.
47, 739	Lindsey, J. P.	Montville, Conn.	Paper-making machinery, rag engine of.	May 16, 1865.
51, 733	Lindsey, Oliver, and Isaac Vance.	Little Falls, N. Y.	Shirt fastener.	Dec. 26, 1865.
51, 598	Link, Henry.	San Francisco, Cal.	Drill, rock.	Dec. 19, 1865.
46, 682	Linscott, John M.	Providence, R. I.	Sandal, ice.	Mar. 7, 1865.
46, 683	Linton, Thomas J.	Providence, R. I.	Pumps.	Mar. 7, 1865.
50, 723	Liville, Jacob H. and	Pittsburg, Pa.	Bridges, wrought-iron.	Oct. 31, 1865.
	{ John L. Piper.	Altoona, Pa.		
45, 727	Lipman, Hyman L.	Philadelphia, Pa.	Eyeletting machines.	Jan. 3, 1865.
	Lippincott, Thomas, and James A. Hamer. (See Hamer & Lippincott.)	Pittsburg, Pa.	Saws, grinding and pollbing.	Oct. 24, 1865.
50, 606	Lippincott, William J.	Manfield, Ohio.	Dryer, fruit.	July 4, 1865.
46, 570	Lippy, David.	New York, N. Y.	Tongs, gas-fitters.	Aug. 15, 1865.
49, 424	Lissy, Andrew B.	Carbondale, Pa.	Boilers, steam.	Aug. 1, 1865.
49, 125	Lister, David.			
	Litchfield, H. T. et al. (See Bidwell, J. A., assignor.)	New York, N. Y.	Type, letter-press.	Apr. 18, 1865.
2, 054	Little, Andrew.	Danville, Ind.	Fruit gatherer.	Mar. 21, 1865.
46, 917	Little, James A.	Copake, N. Y.	Pot, coffee.	Mar. 21, 1865.
46, 922	Little, James H.	Canton, Ohio.	Stove.	Feb. 14, 1865.
2, 074	Little, B., assignor to self and Samuel Little.	Covington, Ky.	Fireplaces.	Sept. 26, 1865.
1, 800	Littfield, Dennis G.	Albany, N. Y.	Stove, base-burning.	Feb. 28, 1865.
1, 876	Littfield, Dennis G.	Albany, N. Y.	Stove, base-burning.	May 30, 1865.
	Littfield, Hiram and C. O. Morse. (See Eaters, Samuel, assignor.)	Lewis, Iowa.	Sealgold.	Aug. 8, 1865.
49, 283	Littfield, Horace.	Cambridge, Mass.	Sifter, flour.	June 13, 1865.
46, 180	Littfield, Joseph H.

*List of patentees of inventions, designs, and reissues, 1865—Continued.*

No.	Patentee.	Residence.	Invention or discovery.	Date.
40,984	Loomis, K. H.	Baltimore, Md.	Valve gear, cut-off.	Aug. 8, 1865.
40,985	Loomis, William H.	Fortified Iowa.	Chaff and straw stacker.	Mar. 21, 1865.
40,986	Lott, A.	Utica, N. Y.	Evaporator.	May 31, 1865.
40,987	Lott, George E.	Philadelphia, Pa.	Bed bottom, spring.	Jan. 31, 1865.
40,988	Lord, Richard, and Levi Hutton	Philadelphia, Pa.	Carving engines, dolling apparatus for.	Jan. 31, 1865.
40,989	Lord, Scott. (See Holmes, Ira, assignor.)			
40,990	Lorillard, Blaise, et al. (See Southworth, Daniel H., assignor.)			
51,066	Loring, Charles	South Braintree, Mass.	Threshold door.	Nov. 21, 1865.
40,991	Louis, Thomas M.	Elmira, N. Y.	Stove-pipe thimble.	Feb. 14, 1865.
40,992	Lowe, Isaac	Philadelphia, Pa.	Compound lubricating.	Sept. 19, 1865.
50,015	Loth, Peter	New York, N. Y.	Chandler.	Apr. 18, 1865.
47,312	Lott, Daniel	Lottville, Pa.	Car revolving.	Aug. 1, 1865.
49,126	Loucks, Wesley	Schoharie, N. Y.	Cooker, egg.	June 13, 1865.
48,190	Loud, Thomas	Philadelphia, Pa.	Musical instruments, swell for.	Aug. 1, 1865.
49,127	Loughborough, Ira E.	Pittsford, N. Y.	Boots and shoes, heel and toe plates for.	Apr. 4, 1865.
47,115	Loughborough, William S., and James Chase. (See Chase & Loughborough.)			
48,999	Loughran, Michael, assignor to self and J. B. Loughran.	Pittsburg, Pa.	Singletrees, method of forming blank clips for.	July 11, 1865.
47,027	Louth, Adam W.	Philadelphia, Pa.	Offal, &c., apparatus for treating.	Mar. 28, 1865.
51,067	Loutrel, C. H. (See Francis, L., assignor.) Release.			
47,028	Loutrel, C. H. (See Francis, L., assignor.) Release.			
51,068	Loutrel, C. H., and L. Francis. (See Francis & Letmate, assignor.) Release.			
51,069	Lovatt, John	Newark, N. J.	Skates.	Dec. 12, 1865.
48,628	Love, F. M., assignor to self and Samuel C. Love	Walden, Ind.	Evaporator.	July 4, 1865.
50,987	Love, Horace T.	Vermilion Township, Kan.	Augers.	Nov. 7, 1865.
49,128	Love, Horace W.	Brooklyn, N. Y.	Wrench, screw.	Aug. 1, 1865.
51,072	Lovgrove, Thomas J.	Philadelphia, Pa.	Pumps for deep wells.	Dec. 19, 1865.
46,756	Lovgrove, Thomas J., assignor to self and Henry Baldwin, Jr.	Philadelphia, Pa.	Well, artesian, sand pump for.	Mar. 7, 1865.
46,757	Lovgrove, Thomas J., assignor to self and Henry Baldwin, Jr.	Philadelphia, Pa.	Drill, rock.	Mar. 7, 1865.
47,889	Lovgrove, Thomas J., assignor to self and Henry Baldwin, Jr.	Philadelphia, Pa.	Well, borer for.	May 2, 1865.
47,890	Lovgrove, Thomas J., assignor to self and Henry Baldwin, Jr.	Philadelphia, Pa.	Well, borer for.	May 2, 1865.
47,891	Lovgrove, Thomas J., assignor to self and Henry Baldwin, Jr.	Philadelphia, Pa.	Drill, rock.	May 2, 1865.
47,892	Lovgrove, Thomas J., assignor to self and Henry Baldwin, Jr.	Philadelphia, Pa.	Traps, catgut.	May 2, 1865.
48,323	Lovgrove, Thomas J., assignor to self and Henry Baldwin, Jr.	Philadelphia, Pa.	Shovel and bucket, casting.	May 2, 1865.
48,324	Lovgrove, Thomas J., assignor to self and Henry Baldwin, Jr.	Philadelphia, Pa.	Well, steam, machine for boring.	May 2, 1865.
48,325	Lovgrove, Thomas J., assignor to self and Henry Baldwin, Jr.	Philadelphia, Pa.	Engine, steam, governors.	June 30, 1865.
50,930	Lovgrove, Thomas J., assignor to self and Henry Baldwin, Jr.	Philadelphia, Pa.	Mowing machines.	June 30, 1865.
50,931	Lovgrove, Thomas J., assignor to self and Henry Baldwin, Jr.	Philadelphia, Pa.	Clock front.	Nov. 7, 1865.
50,932	Lovgrove, Thomas J., assignor to self and Henry Baldwin, Jr.	Philadelphia, Pa.	Clock front.	Nov. 7, 1865.
50,933	Lovgrove, Thomas J., assignor to self and Henry Baldwin, Jr.	Philadelphia, Pa.	Clock front.	Nov. 7, 1865.
50,934	Lovgrove, Thomas J., assignor to self and Henry Baldwin, Jr.	Philadelphia, Pa.	Clock front.	Nov. 7, 1865.
50,935	Lovgrove, Thomas J., assignor to self and Henry Baldwin, Jr.	Philadelphia, Pa.	Clock front.	Nov. 7, 1865.
50,936	Lovgrove, Thomas J., assignor to self and Henry Baldwin, Jr.	Philadelphia, Pa.	Clock front.	Nov. 7, 1865.
50,937	Lovgrove, Thomas J., assignor to self and Henry Baldwin, Jr.	Philadelphia, Pa.	Clock front.	Nov. 7, 1865.
50,938	Lovgrove, Thomas J., assignor to self and Henry Baldwin, Jr.	Philadelphia, Pa.	Clock front.	Nov. 7, 1865.
50,939	Lovgrove, Thomas J., assignor to self and Henry Baldwin, Jr.	Philadelphia, Pa.	Clock front.	Nov. 7, 1865.
50,940	Lovgrove, Thomas J., assignor to self and Henry Baldwin, Jr.	Philadelphia, Pa.	Clock front.	Nov. 7, 1865.
50,941	Lovgrove, Thomas J., assignor to self and Henry Baldwin, Jr.	Philadelphia, Pa.	Clock front.	Nov. 7, 1865.
50,942	Lovgrove, Thomas J., assignor to self and Henry Baldwin, Jr.	Philadelphia, Pa.	Clock front.	Nov. 7, 1865.
50,943	Lovgrove, Thomas J., assignor to self and Henry Baldwin, Jr.	Philadelphia, Pa.	Clock front.	Nov. 7, 1865.
50,944	Lovgrove, Thomas J., assignor to self and Henry Baldwin, Jr.	Philadelphia, Pa.	Clock front.	Nov. 7, 1865.
50,945	Lovgrove, Thomas J., assignor to self and Henry Baldwin, Jr.	Philadelphia, Pa.	Clock front.	Nov. 7, 1865.
50,946	Lovgrove, Thomas J., assignor to self and Henry Baldwin, Jr.	Philadelphia, Pa.	Clock front.	Nov. 7, 1865.
50,947	Lovgrove, Thomas J., assignor to self and Henry Baldwin, Jr.	Philadelphia, Pa.	Clock front.	Nov. 7, 1865.
50,948	Lovgrove, Thomas J., assignor to self and Henry Baldwin, Jr.	Philadelphia, Pa.	Clock front.	Nov. 7, 1865.
50,949	Lovgrove, Thomas J., assignor to self and Henry Baldwin, Jr.	Philadelphia, Pa.	Clock front.	Nov. 7, 1865.
50,950	Lovgrove, Thomas J., assignor to self and Henry Baldwin, Jr.	Philadelphia, Pa.	Clock front.	Nov. 7, 1865.
50,951	Lovgrove, Thomas J., assignor to self and Henry Baldwin, Jr.	Philadelphia, Pa.	Clock front.	Nov. 7, 1865.
50,952	Lovgrove, Thomas J., assignor to self and Henry Baldwin, Jr.	Philadelphia, Pa.	Clock front.	Nov. 7, 1865.
50,953	Lovgrove, Thomas J., assignor to self and Henry Baldwin, Jr.	Philadelphia, Pa.	Clock front.	Nov. 7, 1865.
50,954	Lovgrove, Thomas J., assignor to self and Henry Baldwin, Jr.	Philadelphia, Pa.	Clock front.	Nov. 7, 1865.
50,955	Lovgrove, Thomas J., assignor to self and Henry Baldwin, Jr.	Philadelphia, Pa.	Clock front.	Nov. 7, 1865.
50,956	Lovgrove, Thomas J., assignor to self and Henry Baldwin, Jr.	Philadelphia, Pa.	Clock front.	Nov. 7, 1865.
50,957	Lovgrove, Thomas J., assignor to self and Henry Baldwin, Jr.	Philadelphia, Pa.	Clock front.	Nov. 7, 1865.
50,958	Lovgrove, Thomas J., assignor to self and Henry Baldwin, Jr.	Philadelphia, Pa.	Clock front.	Nov. 7, 1865.
50,959	Lovgrove, Thomas J., assignor to self and Henry Baldwin, Jr.	Philadelphia, Pa.	Clock front.	Nov. 7, 1865.
50,960	Lovgrove, Thomas J., assignor to self and Henry Baldwin, Jr.	Philadelphia, Pa.	Clock front.	Nov. 7, 1865.
50,961	Lovgrove, Thomas J., assignor to self and Henry Baldwin, Jr.	Philadelphia, Pa.	Clock front.	Nov. 7, 1865.
50,962	Lovgrove, Thomas J., assignor to self and Henry Baldwin, Jr.	Philadelphia, Pa.	Clock front.	Nov. 7, 1865.
50,963	Lovgrove, Thomas J., assignor to self and Henry Baldwin, Jr.	Philadelphia, Pa.	Clock front.	Nov. 7, 1865.
50,964	Lovgrove, Thomas J., assignor to self and Henry Baldwin, Jr.	Philadelphia, Pa.	Clock front.	Nov. 7, 1865.
50,965	Lovgrove, Thomas J., assignor to self and Henry Baldwin, Jr.	Philadelphia, Pa.	Clock front.	Nov. 7, 1865.
50,966	Lovgrove, Thomas J., assignor to self and Henry Baldwin, Jr.	Philadelphia, Pa.	Clock front.	Nov. 7, 1865.
50,967	Lovgrove, Thomas J., assignor to self and Henry Baldwin, Jr.	Philadelphia, Pa.	Clock front.	Nov. 7, 1865.
50,968	Lovgrove, Thomas J., assignor to self and Henry Baldwin, Jr.	Philadelphia, Pa.	Clock front.	Nov. 7, 1865.
50,969	Lovgrove, Thomas J., assignor to self and Henry Baldwin, Jr.	Philadelphia, Pa.	Clock front.	Nov. 7, 1865.
50,970	Lovgrove, Thomas J., assignor to self and Henry Baldwin, Jr.	Philadelphia, Pa.	Clock front.	Nov. 7, 1865.
50,971	Lovgrove, Thomas J., assignor to self and Henry Baldwin, Jr.	Philadelphia, Pa.	Clock front.	Nov. 7, 1865.
50,972	Lovgrove, Thomas J., assignor to self and Henry Baldwin, Jr.	Philadelphia, Pa.	Clock front.	Nov. 7, 1865.
50,973	Lovgrove, Thomas J., assignor to self and Henry Baldwin, Jr.	Philadelphia, Pa.	Clock front.	Nov. 7, 1865.
50,974	Lovgrove, Thomas J., assignor to self and Henry Baldwin, Jr.	Philadelphia, Pa.	Clock front.	Nov. 7, 1865.
50,975	Lovgrove, Thomas J., assignor to self and Henry Baldwin, Jr.	Philadelphia, Pa.	Clock front.	Nov. 7, 1865.
50,976	Lovgrove, Thomas J., assignor to self and Henry Baldwin, Jr.	Philadelphia, Pa.	Clock front.	Nov. 7, 1865.
50,977	Lovgrove, Thomas J., assignor to self and Henry Baldwin, Jr.	Philadelphia, Pa.	Clock front.	Nov. 7, 1865.
50,978	Lovgrove, Thomas J., assignor to self and Henry Baldwin, Jr.	Philadelphia, Pa.	Clock front.	Nov. 7, 1865.
50,979	Lovgrove, Thomas J., assignor to self and Henry Baldwin, Jr.	Philadelphia, Pa.	Clock front.	Nov. 7, 1865.
50,980	Lovgrove, Thomas J., assignor to self and Henry Baldwin, Jr.	Philadelphia, Pa.	Clock front.	Nov. 7, 1865.
50,981	Lovgrove, Thomas J., assignor to self and Henry Baldwin, Jr.	Philadelphia, Pa.	Clock front.	Nov. 7, 1865.
50,982	Lovgrove, Thomas J., assignor to self and Henry Baldwin, Jr.	Philadelphia, Pa.	Clock front.	Nov. 7, 1865.
50,983	Lovgrove, Thomas J., assignor to self and Henry Baldwin, Jr.	Philadelphia, Pa.	Clock front.	Nov. 7, 1865.
50,984	Lovgrove, Thomas J., assignor to self and Henry Baldwin, Jr.	Philadelphia, Pa.	Clock front.	Nov. 7, 1865.
50,985	Lovgrove, Thomas J., assignor to self and Henry Baldwin, Jr.	Philadelphia, Pa.	Clock front.	Nov. 7, 1865.
50,986	Lovgrove, Thomas J., assignor to self and Henry Baldwin, Jr.	Philadelphia, Pa.	Clock front.	Nov. 7, 1865.
50,987	Lovgrove, Thomas J., assignor to self and Henry Baldwin, Jr.	Philadelphia, Pa.	Clock front.	Nov. 7, 1865.
50,988	Lovgrove, Thomas J., assignor to self and Henry Baldwin, Jr.	Philadelphia, Pa.	Clock front.	Nov. 7, 1865.
50,989	Lovgrove, Thomas J., assignor to self and Henry Baldwin, Jr.	Philadelphia, Pa.	Clock front.	Nov. 7, 1865.
50,990	Lovgrove, Thomas J., assignor to self and Henry Baldwin, Jr.	Philadelphia, Pa.	Clock front.	Nov. 7, 1865.
50,991	Lovgrove, Thomas J., assignor to self and Henry Baldwin, Jr.	Philadelphia, Pa.	Clock front.	Nov. 7, 1865.
50,992	Lovgrove, Thomas J., assignor to self and Henry Baldwin, Jr.	Philadelphia, Pa.	Clock front.	Nov. 7, 1865.
50,993	Lovgrove, Thomas J., assignor to self and Henry Baldwin, Jr.	Philadelphia, Pa.	Clock front.	Nov. 7, 1865.
50,994	Lovgrove, Thomas J., assignor to self and Henry Baldwin, Jr.	Philadelphia, Pa.	Clock front.	Nov. 7, 1865.
50,995	Lovgrove, Thomas J., assignor to self and Henry Baldwin, Jr.	Philadelphia, Pa.	Clock front.	Nov. 7, 1865.
50,996	Lovgrove, Thomas J., assignor to self and Henry Baldwin, Jr.	Philadelphia, Pa.	Clock front.	Nov. 7, 1865.
50,997	Lovgrove, Thomas J., assignor to self and Henry Baldwin, Jr.	Philadelphia, Pa.	Clock front.	Nov. 7, 1865.
50,998	Lovgrove, Thomas J., assignor to self and Henry Baldwin, Jr.	Philadelphia, Pa.	Clock front.	Nov. 7, 1865.
50,999	Lovgrove, Thomas J., assignor to self and Henry Baldwin, Jr.	Philadelphia, Pa.	Clock front.	Nov. 7, 1865.
51,000	Lovgrove, Thomas J., assignor to self and Henry Baldwin, Jr.	Philadelphia, Pa.	Clock front.	Nov. 7, 1865.
51,001	Lovgrove, Thomas J., assignor to self and Henry Baldwin, Jr.	Philadelphia, Pa.	Clock front.	Nov. 7, 1865.
51,002	Lovgrove, Thomas J., assignor to self and Henry Baldwin, Jr.	Philadelphia, Pa.	Clock front.	Nov. 7, 1865.

46,374	Mayer, John M.	New York, N. Y.	Grain, machine for hulling and cleaning.	Feb. 14, 1865.
49,776	Mayer, John.	East Hampton, Mass.	Oil cans.	Sept. 5, 1865.
	Mayhew, Jonathan, and Thomas S. Ray. (See Stuber & Frank, assignors.)	Reissue.		
46,008	Mayhew, T.	Poughkeepsie, N. Y.	Photographic card mount.	Jan. 24, 1865.
51,356	Mayhew, Theophilus	New York, N. Y.	Drills, rock	Dec. 5, 1865.
48,194	Mayland, George	Brooklyn, N. Y.	Fruit knife and nut pick.	June 13, 1865.
47,843	Maynard, Edward	Washington, D. C.	Buttons.	May 23, 1865.
48,423	Maynard, Edward	Washington, D. C.	Fire-arms, breech-loading	June 27, 1865.
49,966	Maynard, Edward	Washington, D. C.	Cartridge retractor, for breech-loading fire-arms	July 25, 1865.
49,130	Maynard, Edward	Washington, D. C.	Fire-arms, breech-loading	Aug. 1, 1865.
50,853	Mayo, John K.	Portland, Me.	Board, scale, and match splints, machines for cutting	Nov. 7, 1865.
51,735	Mayo, John K.	Portland, Me.	Material for roofing, tubing, tanks, wallinsulating, boat and other structures.	Dec. 26, 1865.
49,921	Mayor, Thomas	Pawtucket, R. I.	Roving frames, flyers for.	Mar. 31, 1865.
46,530	Mayor, Thomas, assignor to George Chatterton.	Pawtucket, R. I.	Roving frames.	Feb. 31, 1865.
1,950	Mayor, Thomas, assignor to George Chatterton.	Pawtucket, R. I.	Roving frames. (Reissue.)	May 9, 1865.
	McAdams, John	Brooklyn, N. Y.	Books, account, machines for numbering the pages of. (Reissue.)	Aug. 11, 1865.
51,088	McAfee, Daniel.	Pittsburg, Pa.	Glass pots.	Nov. 21, 1865.
48,702	McArthur, William	Philadelphia, Pa.	Weather renovator	July 1, 1865.
46,382	McAvoy, Hugh L., assignor to self and Elias S. Hutchinson	Baltimore, Md.	Air, apparatus for carburetting	Feb. 7, 1865.
50,075	McAvoy, Hugh L., assignor to self and Elias S. Hutchinson	Baltimore, Md.	Burners, gas.	Sept. 19, 1865.
50,076	McAvoy, Hugh L., assignor to self and Elias S. Hutchinson	Baltimore, Md.	Air, apparatus for carburetting	Sept. 19, 1865.
52,069	McAvoy, Hugh L., assignor to self and Elias S. Hutchinson	Baltimore, Md.	Air, apparatus for carburetting	Sept. 19, 1865.
51,263	McCambridge, Samuel	Philadelphia, Pa.	Air brakes.	Nov. 3, 1865.
51,069	McCarthy, William C.	Pittsburg, Pa.	Measuring liquids in casks, instruments for. (Ante-dated May 31, 1865.)	Nov. 21, 1865.
49,640	McCauley, Reuben A.	Baltimore, Md.	Pumps	Aug. 20, 1865.
51,736	McCauley, Reuben A.	Baltimore, Md.	Pumps	Dec. 24, 1865.
49,477	McClave, Wm., assignor to Wm. P. Connell & Wm. M. Silkman.	Hyde Park, Pa.	Lamps, miners'	Aug. 15, 1865.
46,571	McClendon, John	Washington, D. C.	Valves, stop.	Feb. 26, 1865.
46,572	McClendon, J., and R. Thayer. (See Thayer & McClelland.)	Washington, D. C.	Street washers.	Feb. 26, 1865.

50,304	McClintock, William, assignor to self and G. G. Lobdell	Wilmington, Del.	Valve gear, cut-off	Oct. 3, 1865.
48,405	McClintock, John, assignor to self and Samuel H. Ballou	New York, N. Y.	New machine	June 10, 1865.
50,492	McClintock, John, assignor to Henry McClintock	New York, N. Y.	Heating apparatus, water	Oct. 10, 1865.
50,987	McConnell, Robert	Lawrenceville, Ill.	Tool for fastening tubes in boilers	Aug. 9, 1865.
50,854	McConnell, Robert	Lawrenceville, Pa.	Nails, instruments for extracting	Nov. 7, 1865.
50,257	McConnell, Robert	Philadelphia, Pa.	Cultivators	Oct. 3, 1865.
49,131	McCracken, Edwin D.	New York, N. Y.	Fabrics, felted, manufacture of	Aug. 3, 1865.
47,440	McCrone, Alexander F.	Ellcott's Mills, Md.	Car brakes, railroad	Apr. 25, 1865.
48,703	McCrum, James	Lecott Grove, Ohio	Gauges, carpenters	July 11, 1865.
46,810	McCurdy, David	Ottawa, Ohio	Churn dashers	Mar. 14, 1865.
48,904	McCurdy, James S.	Bridgeport, Conn.	Sewing machine shuttles	Sept. 12, 1865.
50,021	McCurdy, James S.	Bridgeport, Conn.	Screw-drivers	Sept. 19, 1865.
46,303	McCurdy, James S.	Bridgeport, Conn.	Sewing machine	Feb. 7, 1865.
46,704	McDill, Thomas W.	Perry, Ill.	Stalks, corn, on the ground, device for cutting	July 11, 1865.
46,574	McDonald, Angus	Mattawan, Mich.	Propeller, endless chain	July 4, 1865.
47,067	McDonald, A. G., assignor to John Morrison	Dubuque, Iowa	Wrench	Mar. 29, 1865.
50,483	McDonald, Charles D. (See Emerson, James, assignor.)	Pittsburg, Pa.	Furnace, puddling, fixing for	Oct. 18, 1865.
45,729	McDonald, Hugh	New York, N. Y.	Gases, apparatus for carburetting	Jan. 3, 1865.
49,641	McDowell, Robert. (See La Bar, Jesse, assignor.)	Hagerstown, Md.	Mills, elder	Aug. 29, 1865.
50,146	McEachren, Benjamin	San Francisco, Cal.	Enamelling mouldings, apparatus for	Sept. 28, 1865.
49,540	McEwen, Ezra, assignor to self and Henry R. Fowler	Lisbon, Ill.	Cultivator	Aug. 22, 1865.
45,928	McFarland, Archibald. (See Wassell, Edwin, assignor.)	Worcester, Mass.	Forging apparatus	Jan. 17, 1865.
51,737	McFarland, Edward F.	Worcester, Mass.	Spring and weight piston engine and stamping machine	Dec. 29, 1865.
47,029	McGaffey, Ives W.	Chicago, Ill.	Planter and cultivator, combined	Mar. 29, 1865.
46,811	McGill, William C.	Cincinnati, Ohio	Fastener, saws	Feb. 21, 1865.
47,315	McGill, William C.	Cincinnati, Ohio	Windmills	Mar. 14, 1865.
47,969	McGill, William C.	Cincinnati, Ohio	Movement, mechanical	Apr. 18, 1865.
49,531	McGill, William C.	Cincinnati, Ohio	Holding and lowering weights	May 30, 1865.
49,905	McGill, William C.	Cincinnati, Ohio	Supporter, saws	Aug. 22, 1865.
51,470	McGill, William C.	Cincinnati, Ohio	Movement, mechanical	Sept. 12, 1865.
51,604	McGill, William C.	Cincinnati, Ohio	File holder	Dec. 12, 1865.
45,844	McGillivray, James A.	Cincinnati, Ohio	Hinge	Dec. 19, 1865.
46,193	McGillivray, James A.	Dyer, Ind.	Presses	Jan. 10, 1865.
48,296	McGinnis, Barney, assignor to self and Reuben S. Torrey	New York, N. Y.	Steam generators	Jan. 31, 1865.
48,297	McGinnis, James, and Thomas Wiles. (See Wiles & McGinnis.)	Richmond, Ind.	Fancels, measuring	June 20, 1865.
47,654	McGinnis, M.	Allegheny, Pa.	Bells, door	June 20, 1865.
49,132	McGrath, Robert	Philadelphia, Pa.	Fluid ejectors	May 16, 1865.
50,258	McGuirk, Henry. (See McCloskey, John, assignor.)	New York, N. Y.	Surgeons' operating tables	Aug. 1, 1865.
51,471	McIlroy, Thomas	Philadelphia, Pa.	Grates for stoves	Oct. 3, 1865.
46,375	McIntosh, William	New York, N. Y.	Cords, braids, &c., machine for starching and glazing	Dec. 12, 1865.
49,427	McIntyre, A. S., and Nathaniel S. Thompson	Stonham, Mass.	Lathing machines, toe pieces for	Feb. 14, 1865.
50,375	McIntyre, John S.	Chicago, Ill.	Buildings, apparatus for removing	Aug. 10, 1865.
50,375	McIntyre, John S.	Chicago, Ill.	Buildings, apparatus for removing	Oct. 10, 1865.
50,375	McIntosh, James P., and William B. Burnett. (See Burnett & McIntosh.)	Chicago, Ill.	Buildings, apparatus for removing	Oct. 10, 1865.

*List of patentees of inventions, designs, and reissues, 1865—Continued.*

No.	Patentee.	Residence.	Invention or discovery.	Date.
	McIntosh, James P., and William B. Burnett. (See Burnett & McIntosh.)			
	McKay, Donald. (See Lay, John L., assignor.)			
	McKay, Donald. (See Wood & Lay, assignors.)			
	McKay, Donald. (See Wood & Lay, assignors.)			
	McKay, Donald. (See Wood & Lay, assignors.)			
	McKay, Gordon, assignor to James Purinton, Jr.			
48,238	McKay, Gordon, and	Boston, Mass.	Soles, channelled.	June 13, 1865.
47,770	Lyman R. Hicks, assignors to Gordon McKay	Boston, Mass.	Shoe, turned.	May 16, 1865.
46,688	McKen, H. T., assignor to self and William H. Reel.	Quincy, Mass.	Dough, trough for raising	Mar. 7, 1865.
	McKenzie, J. U. (See Stollker, Joseph, assignor.)	Allegheny, Pa.		
47,441	McKee, John	Jersey City, N. J.	Presses, oil	Apr. 25, 1865.
45,929	McKee, John	Phillips' Mills, Pa.	Plough, side hill.	Jan. 17, 1865.
48,987	McKinney, E.	Middletown, Pa.	Burning petroleum, apparatus for	July 23, 1865.
45,930	McKison, Elijah	Philadelphia, Pa.	Stoves, cooking, detachable flat-top and elevated	Jan. 17, 1865.
	McKnight, J. T. (See Hickey, Michael, assignor.)			
2,095	McLain, James. (See Brown & Lowry, assignor.)	Cincinnati, Ohio	Monument	June 13, 1865.
47,316	McLaughlin, James W.	Brooklyn, N. Y.	Gun cotton and lint, manufacture of	Apr. 18, 1865.
50,147	McLean, James W.	Brooklyn, N. Y.	Pads, ventilating	Sept. 26, 1865.
49,478	McMabid, John, assignor to self and Abner Cory.	Huntilton, Ohio	Straw cutters.	Aug. 15, 1865.
51,205	McMaster, David	Bath, N. Y.	Ladders, fruit	Nov. 28, 1865.
	McMasters, L. J. et al. (See Hubbard, Orange B., assignor.)			
	McMurray, Robert, and James S. Topham			
47,028	McMurry, John, and John A. Roebbing. (See Roebbing & McMurry.)	Washington, D. C.	Saddle valise	Mar. 28, 1865.
	McNab, Daniel			
45,730	McNew, J. P.	Moscow, Mich.	Cultivators	Jan. 3, 1865.
49,438	McNeil, John A.	Philadelphia, Pa.	Desk, folding	Aug. 15, 1865.
50,794	McNulty, B. H., and William Keen.	Grand Rapids, Mich.	Meat pounder and potato masher.	Oct. 31, 1865.
47,844	McNutt, John J. (See Locke, Harvey, assignor.)	Mansfield, Ohio	Tanning, process for	May 23, 1865.
	McPherson, James A.	Rockford, Ill.	Horsehoes	Dec. 26, 1865.
51,738	McPherson, James A.	Troy, N. Y.	Ballot boxes.	Jan. 24, 1865.
46,012	McWilliams, James H. (See Brown, Daniel T., assignor.)	Kilbourn, Ohio	Washing machine	July 4, 1865.
48,576	Meacham, Samuel P.	New York, N. Y.	Buttons	June 30, 1865.
2,098	Meacham, George A., assignor through means assignments to Charles Smart	New York, N. Y.		
45,721	Mead, Beverly F.	Parkville, N. Y.	Game	Jan. 3, 1865.
50,660	Mead, Daniel U., and Charles Magel, assignors to Charles Magel	Pittsburg, Pa.	Steam generators, low-water detectors for	Oct. 24, 1865.
48,988	Mead, H. A.	Cuba, N. Y.	Carpet stretcher	July 23, 1865.
48,575	Mead, H. A.	Gloversville, N. Y.	Cultivator	July 4, 1865.
45,931	Mealer, George	Ottawa, Ill.	Wrenches	Jan. 17, 1865.
	Meare, L. R., and Edwin Thompson. (See Thompson & Meare.)			
49,042	Meare, William R.	Grafton, Ill.	Spading machines	Aug. 29, 1865.

*List of patentees of inventions, designs, and reissues, 1865—Continued.*

No.	Patentee.	Residence.	Invention or discovery.	Date.
42, 772	Mihan, Patrick, assignor to Oliver P. Drake.	Roston, Mass.	Air, apparatus for carburetting	July 11, 1865.
46, 125	Milbank, Isaac M.	Greenfield Hill, Conn.	Fire-arms, breech-loading	Jan. 31, 1865.
48, 873	Milburn, Benjamin T., assignor to self and Joseph Rigby.	Wilmington, Del.	Railway chairs	July 18, 1865.
46, 304	Miles, C. M., and J. S. Hoard. (See Hoard and Miles.)	Buckland, Mass.	Cutlery table	Feb. 7, 1865.
49, 269	Miles, Nathaniel, assignor to Bay State Hardware Company	Aurora, Ill.	Vehicles. (Antedated August 7, 1865.)	Aug. 8, 1865.
50, 149	Miles, O. E.	New York, N. Y.	Curtain fixtures.	Sept. 26, 1865.
50, 022	Miles, Parobes	Utica, N. Y.	Cans, construction of.	Sept. 19, 1865.
49, 596	Miller, Henry W.	France	Air, apparatus for carburetting	Aug. 22, 1865.
	Miller, M. J. A., assignor to H. A. G. Du Vergier			
	Miller, W. H., and Mathias J. Rice. (See Rice & Millen.)			
	Miller, W. H., and Mathias J. Rice. (See Rice & Millen.)			
	Miller, August, and Fitch Raymond. (See Raymond & Miller.)			
	Miller, August, and Fitch Raymond. (See Raymond & Miller.)			
	Miller, August, and Fitch Raymond. (See Raymond & Miller.)			
48, 195	Miller, Charles E.	Cincinnati, Ohio	Broom head	June 13, 1865.
51, 658	Miller, Charles T.	Cincinnati, Ohio	Broom head	Dec. 19, 1865.
48, 196	Miller, Charles T.	Providence, R. I.	Sifter, ash	June 13, 1865.
50, 609	Miller, Edwin E., and Bela Gardner	Williamsburg, Hampshire county, Mass.	Belts together, machine for drawing	Oct. 24, 1865.
46, 126	Miller, Extra	Janesville, Wis.	Car coupler and buffer	Jan. 31, 1865.
45, 932	Miller, George	Washington, D. C.	Gauges, carpenters'	Jan. 17, 1865.
50, 484	Miller, George W., and Albert Watson. (See Watson & Miller.)	Washington, D. C.	Gauges, carpenters'	Oct. 18, 1865.
45, 847	Miller, Henry J.	Shanerville, Ohio	Sawing machines	Jan. 10, 1865.
47, 170	Miller, Iron B. and William H.	Philadelphia, Pa.	Lubricating the packing of stuffing boxes, &c.	Apr. 4, 1865.
47, 119	Miller, Iron B. and William H.	Philadelphia, Pa.	Pistons, &c., manufacture of packing for	Apr. 4, 1865.
48, 425	Miller, James.	St. Louis, Mo.	Grates	June 27, 1865.
47, 442	Miller, John	Buffalo, N. Y.	Faucet, beer	Apr. 25, 1865.
50, 213	Miller, John	Russellville, Ky.	Planters, feed	Sept. 25, 1865.
46, 259	Miller, John A.	Paduach, Ky.	Ordinance, breech-loading	Feb. 7, 1865.
50, 610	Miller, John A.	Somerville, Ohio	Broom-head	Oct. 24, 1865.
46, 127	Miller, Joseph A.	New York, N. Y.	Grate bars for furnaces, casting	Jan. 31, 1865.
47, 118	Miller, Joseph A.	New York, N. Y.	Furnace, boiler	Apr. 4, 1865.
47, 443	Miller, Joseph A.	New York, N. Y.	Furnaces, hot air	Apr. 25, 1865.
50, 611	Miller, Joseph A., and Joseph W. Wayne. (See Wayne & Miller.)	New York, N. Y.	Boilers, cast-iron	Oct. 24, 1865.
51, 070	Miller, Lewis	Akron, Ohio	Harvesters, rake attachments to	Nov. 21, 1865.
51, 071	Miller, Lewis	Akron, Ohio	Harvesters, rake attachments to	Nov. 21, 1865.
46, 952	Miller, Rauger B.	Utica, N. Y.	Fibres of epilobium, manufacture from	Mar. 21, 1865.
48, 578	Miller, Samuel J., Albert B. Barnett, and William H. Study.	Economy, Ind.	Hides, apparatus for tanning	July 4, 1865.
46, 128	Miller, Thomas	Columbus, Ohio	Canal scraper	Jan. 31, 1865.
48, 128	Miller, William	Cincinnati, Ohio	Hoisting machine	June 24, 1865.
51, 065	Miller, William	Cincinnati, Ohio	Hoisting machine	Sept. 24, 1865.
51, 066	Miller, William	Cincinnati, Ohio	Hoisting machine	Sept. 24, 1865.
48, 579	Miller, William	Cincinnati, Ohio	Hoisting machine	July 4, 1865.

## List of patentees of inventions, designs, and reissues, 1865—Continued.

No.	Patentee.	Residence.	Invention or discovery.	Date.
47, 846	Mitchell, S. J.	St. Louis, Mo.	Lightning rods.	May 23, 1865.
51, 206	Mitchell, Thomas D., et al. (See Billings, Jasper, assignor.)	Terre Haute, Ind.	Evaporator.	Nov. 26, 1865.
48, 296	Moen, P. L., and J. Washburn. (See Chesney & Brown, assignors.)	Pittsburg, Pa.	Printing names of subscribers upon newspapers, &c. (Extension.)	June 14, 1865.
51, 207	Moen, P. L., and J. Washburn. (See Frost, W. E., assignor.)	Philadelphia, Pa.	Grubbing machines.	June 30, 1865.
48, 970	Moen, P. L., and J. Washburn. (See Frost, W. E., assignor.)	Chelsea, Mass.	Rubber apparatus for moulding.	Nov. 26, 1865.
51, 208	Moen, P. L., and J. Washburn. (See Frost, W. E., assignor.)	Flackall Landing, N. Y.	Sponges for stuffing, packing, &c., preparing.	July 25, 1865.
47, 213	Moffett, Henry.	Baltimore, Md.	Projectiles for rifled ordnance, packing.	Apr. 11, 1865.
47, 243	Moffett, Charles R.	Bordentown, N. J.	Pumps, air.	Apr. 11, 1865.
51, 297	Moffitt, J. R.	Philadelphia, Pa.	Oxides, metallic, process for purifying.	Mar. 21, 1865.
48, 971	Molynux, James, assignor to the Bordentown Machine Company.	New York, N. Y.	Buckle.	Dec. 26, 1865.
47, 243	Molynux, James, and William A. Wright. (See Wright & Molynux.)	New York, N. Y.	Legs, artificial.	July 25, 1865.
46, 924	Monnier, Alfred.	Elmhurst, N. Y.	Cars, railroad, ventilating window for.	Dec. 19, 1865.
51, 740	Monroe, George O.	Smith City, Mo.	Washing machine.	Aug. 1, 1865.
49, 028	Monroe, Robert, E. Stone, and Edgar St. John.	New Haven, Conn.	Pressure and gravitation machines.	Sept. 26, 1865.
51, 607	Monroes, John H.	New Haven, Conn.	Hammer.	Oct. 3, 1865.
49, 135	Monsen, Charles.	New Haven, Conn.	Blasting plug.	Oct. 3, 1865.
50, 151	Monsen, Charles.	Silver Creek, N. Y.	Soparators, grain.	Oct. 31, 1865.
50, 262	Monsen, Charles.	Baltimore, Md.	Soparator, grain.	May 16, 1865.
50, 263	Montgomery, H., and S. Howe, assignors to E. H. and M. E. Montgomery.	Albany, N. Y.	Railroads.	Feb. 21, 1865.
2, 026	Montgomery, James H., and William A. Dryden. (See Dryden & Montgomery.)	Albany, N. Y.	Hammer, carpenter.	Feb. 26, 1865.
47, 772	Montgomery, Joseph and James, and Evan Davis.	Albany, N. Y.	Clothes-rack.	Oct. 31, 1865.
46, 482	Montgomery, Richard.	Indianapolis, Ind.	Steam-generators, safety valve for.	Oct. 10, 1865.
46, 574	Montgum, John O.	Greenfield, Mass.	Brushes, dusting.	Apr. 18, 1865.
49, 779	Moeberry D., et al. (See Pratt, Ira C., assignor.)	Malden, Mass.	Car coupling.	Jan. 3, 1865.
50, 376	Moody, Robert.	Malden, Mass.	Car coupling.	Sept. 26, 1865.
47, 318	Moody, C. Mason.	Malden, Mass.	Car coupling.	Dec. 19, 1865.
45, 733	Moody, Lovell.	Malden, Mass.	Skirts, hoop.	Feb. 14, 1865.
50, 152	Moody, Lovell.	New York, N. Y.	Barometers.	May 30, 1865.
51, 684	Moody, Sarah A.	New York, N. Y.	Lamps, mode of suspending burners for.	Mar. 7, 1865.
1, 872	Moore, John B., and Roswell Denison. (See Denison & Moore.)	Northville, N. Y.	Brooks, &c., jack for pegging. (Antedated February 12, 1865.)	Feb. 21, 1865.
47, 971	Mooney, Gilbert V.	Stafford, Conn.	Scratching knuckle shield.	Aug. 4, 1865.
46, 661	Moore, Albert, and James A. Cole.	Westbrook, Conn.		
46, 664	Moore, A. S., et al. (See Burrill, J., assignor.)			
46, 664	Moore, A. W.			
47, 251	Moore, Charles A.			

61, 337	Moore, Charles G.	New York, N. Y.	Blotter.	Dec. 5, 1865.
47, 847	Moore, C. H. (See Tucker, John E., assignor.)	Boston, Mass.	Boots, device for pulling on.	May 23, 1865.
45, 953	Moore, Frederick H.	Ypsilanti, Iowa.	Fire-chamber cleaner.	Jan. 17, 1865.
51, 338	Moore, George Rodney	Bridgeport, Conn.	Car-wheel, device for annealing.	Dec. 5, 1865.
9, 211	Moore, H. W.	Warren, Mass.	Inks and (Design).	Oct. 31, 1865.
51, 073	Moore, John G.	Philadelphia, Pa.	Ortetric.	Nov. 21, 1865.
47, 031	Moore, John Robert.	Brooklyn, N. Y.	Tools for drilling, coupling.	Mar. 28, 1865.
48, 837	Moore, S. A.	Bloomfield, Iowa.	Horsehoes.	July 16, 1865.
47, 580	Moore, Samuel C.	Boston, Mass.	Matches, friction.	May 23, 1865.
48, 580	Moore, Thomas	Bloomington, Ill.	Sugar process for making.	July 4, 1865.
50, 077	Moore, Thomas, assignor to John Ellierby	Cornwall, Conn.	Kuolin, apparatus for purifying.	Sept. 19, 1865.
46, 971	Moore, William H.	Salom, Mass.	Lo other, machine for boarding.	July 25, 1865.
47, 309	Moran, Richard W.	St. Louis, Mo.	Printing, process.	Apr. 18, 1865.
49, 136	Moran, Francis	Boston, Mass.	Stores, summer.	Aug. 1, 1865.
48, 973	Mora, E. A.	St. Louis, Mo.	Oil-can, method of protecting corks of.	July 25, 1865.
46, 812	Morchaud, Warren	Parkersburg, West Va.	Ladder, extension.	Mar. 14, 1865.
46, 575	Morchaud, Benjamin S. (See Harris, Horace, assignor.) Design.	Cleveland, Ohio.	Garments, under, for ladies, interlined.	Feb. 28, 1865.
51, 073	Morchouse, C. J.	Cardington, Ohio.	Churns.	Nov. 21, 1865.
46, 013	Morchouse, William	Buffalo, N. Y.	Saw-frames, wood.	Jan. 24, 1865.
47, 032	Morchouse, William	Buffalo, N. Y.	Saw-frames, buck.	Mar. 28, 1865.
47, 214	Morchouse, William	Buffalo, N. Y.	Asse-belves.	Apr. 11, 1865.
45, 734	Morgan, E. J. and A. H. Fowler. (See Fowler & Morgan.)	Dundee, Ohio.	Houses, portable, mode of constructing frames of.	Jan. 3, 1865.
46, 758	Morgan, J. C. assignor to Wm. A. Nixon and J. S. Everhard	Alliance, Ohio.	K-y seats, machine for cutting.	Mar. 10, 1865.
47, 559	Morgan, James G., and Joel Weber. (See Webster & Morgan.)	Boston, Mass.	Box, lunch.	May 2, 1865.
50, 023	Morgan, John F.	New York, N. Y.	Grate-bar supports. (Antedated September 6, 1865).	Sept. 19, 1865.
48, 133	Morgan, N. D. (See Jones, Abner W., assignor.)	Philadelphia, Pa.	Fire-arms, breech-loading.	June 6, 1865.
46, 555	Morgan, William F. and F. G. Bartlett	Baden	Cigars, cigarettes, &c., manufacture of.	Mar. 14, 1865.
46, 555	Morgenthaun, Lazarus	Buffalo, N. Y.	Candy, medicated.	Apr. 25, 1865.
47, 043	Morgenthaun, Lazarus	New Lisbon, Ohio.	Bag-holder.	June 6, 1865.
48, 063	Morlan, L. W.	Albany, Pa.	Brick machine.	Aug. 15, 1865.
49, 430	Morley, Isaac	Chandlery, Ohio.	Printing. (Antedated April 24, 1865).	Oct. 24, 1865.
50, 612	Morley, Charles N.	Burlington, N. J.	Fruit box.	Jan. 10, 1865.
45, 848	Morris, Edmund	Burlington, N. J.	Hats.	Sept. 12, 1865.
48, 828	Morris, Edmund	Philadelphia, Pa.	Bolt catch, spring.	July 18, 1865.
47, 741	Morris, George M.	Roxbury, Mass.	Planters, corn, hand.	May 16, 1865.
48, 137	Morris, Jacob H. M.	Abingdon, Mo.	Liniment.	June 13, 1865.
48, 198	Morris, Jacob H. M.	Redding, Ill.	Shingle machines.	June 13, 1865.
46, 129	Morris, Jacob R.	New York, N. Y.	Shingle machines.	Jan. 31, 1865.
46, 483	Morrison, E. R., et al. (See Van Norman, Brown & Morrison.)	Troy, N. Y.	Stores, coal.	Feb. 21, 1865.
46, 289	Morrison, James, Jr.	Troy, N. Y.	Ash-pau drawer and lifter.	June 20, 1865.
47, 154	Morse, Alfred. (See McDonald, A. G., assignor.)	New Haven, Conn.	Carriages, shaft-couplings for.	Apr. 4, 1865.
46, 692	Morse, C. O. and Hiram Littlefield. (See Eaker, Samuel, assignor.)	Harrison, N. J.	Knife, fork, and spoon holder.	Mar. 7, 1865.
	Morse, Frank B., assignor to Frederick C. Dayton, Jr.			
	Morse, G. Livingston, and L. M. Herrick			

## List of patentees of inventions, designs, and reissues, 1865—Continued.

No.	Patentee.	Residence.	Invention or discovery.	Date.
47,749	Morse, Herbert A.	Canton, Mass.	Tobacco, machines for cutting.	May 16, 1865
46,280	Morse, Jonathan E.	Boston, Mass.	Saccharine and other liquids, evaporator for.	Feb. 27, 1865
47,849	Morse, Oliver	Norham Lower Falls, Mass.	Paper-mill engines, bed-plate for.	May 23, 1865
46,703	Morse, Thomas N.	Grattan, Mich.	Presses, wool.	July 11, 1865
49,292	Morse, W. C.	Boston, Mass.	Car-coupling.	Aug. 8, 1865

47,915	Morton, C. P.	Chester, Pa.	Railroads, machine for.	Apr. 11, 1865
45,735	Morton, E. H.	Oxford, Iowa	Trucks, lifting, and mole.	Apr. 3, 1865
49,909	Mosher, O. G., and E. Lamsoure	Philadelphia, Pa.	Shutters, devices for closing and opening.	Sept. 12, 1865
47,123	Mosher, O. E., and Thomas S. Blake. (See Blake & Mosher.)	New York, N. Y.	Refrigerator.	Apr. 4, 1865
50,613	Moss, Reed.	Philadelphia, Pa.	Grate, stove, adjustable.	Oct. 24, 1865
Mott, Charles A., et al. (See Brown, John E., assignor.)				
Mott, George. (See Hall, Samuel Z., assignor.)				
50,094	Moulton, H. L.	Camden, N. J.	Spanning jacks.	Sept. 19, 1865
50,377	Moulton, H. L.	Camden, N. J.	Carriage engines.	Oct. 10, 1865
46,813	Moulton, Joel	Boston, Mass.	Drilling machines.	Oct. 10, 1865
46,860	Moulton, Joel	Boston, Mass.	Pumps in deep oil wells, elastic packing for the exterior of.	Mar. 14, 1865
47,850	Moulton, Joel	Boston, Mass.	Drills, rock.	Mar. 14, 1865
45,849	Mowbray, George M.	Titusville, Pa.	Wells, oil, ejectors for.	May 23, 1865
46,485	Mowbray, George M.	Titusville, Pa.	Wells, oil, ejectors for.	Jan. 10, 1865
46,995	Mowbray, George M.	Titusville, Pa.	Wells, oil, ejectors for.	Feb. 21, 1865
51,350	Mowry, Silas S., and Albert O. Bates	Titusville, Pa.	Oil ejectors.	Mar. 21, 1865
51,629	Moxey, J. G., ass't to self, Henry C. Carey, and Abraham Hart.	Philadelphia, Pa.	Spoke-shaver.	Dec. 5, 1865
48,200	Moyer, E. W.	Philadelphia, Pa.	Bread, manufacture of.	Dec. 19, 1865
48,014	Moyer, J. W.	Philadelphia, Pa.	Bottle stopper.	June 20, 1865
48,015	Moyer, J. W.	Cherry Valley, N. Y.	Soda.	Jan. 24, 1865
48,016	Moyer, J. W.	Cherry Valley, N. Y.	Saws, machines.	Jan. 24, 1865
46,576	Mozart, Don J.	New York, N. Y.	Cords with inner sleeves.	Jan. 24, 1865
46,577	Mozart, Don J.	New York, N. Y.	Thumbpieces, escapements for.	Feb. 29, 1865
46,578	Mozart, Don J.	New York, N. Y.	Clocks, calendar.	Feb. 29, 1865
46,579	Mudge, Byron	Cortlandville, N. Y.	Wells, mode of sinking.	Feb. 29, 1865
46,580	Mudge, George G.	Cleveland, Ind.	Carpet stretcher.	Feb. 29, 1865
46,582	Mudge, Jarvis T.	Cleveland, Ind.	Washing machine.	July 18, 1865
76,145	Muelier, Augustus C., assignor to Heller & Teibrock	St. Louis, Mo.	Trade mark.	July 25, 1865
42,921	Muller, Joseph	New York, N. Y.	Clay for pottery, use, machine for condensing pap or slops of.	Oct. 10, 1865
43,736	Muller, Joseph	New York, N. Y.	Clay for pottery use, process of preparing.	Jan. 3, 1865
43,737	Mulachney, William. (See Ritterhoff & Colquitt, assignors.)	New York, N. Y.		Jan. 3, 1865
Mulachney, William, et al. (See Ritterhoff, Colquitt & Mulachney.)				
48,301	Mulhaupt, George	Buffalo, N. Y.	Drills, rock.	June 20, 1865
50,078	Muller, George	San Francisco, Cal.	Flanes, bench.	Oct. 10, 1865
50,085	Muller, Burkhard, assignor to Schack & Holop	Tulda, Germany	Embroidery, imitation of.	Dec. 10, 1865
50,095	Muller, John M.	North Beloit, Mass.	Tanning.	Dec. 14, 1865
9,593	Muller, Nicholas H.	New York, N. Y.	Clock & front.	Mar. 9, 1865
51,068	Munna, Jacob H.	Harrisburg, Pa.	Soda water.	Mar. 21, 1865
51,074	Munna, Jacob H.	Harrisburg, Pa.	Brooms, attachment for.	Nov. 21, 1865

1, 699	Murray, Jacob H., assignor through messrs assignments to H. K. Farman.	Harrisburg, Pa.	Murray, Jacob H.	(Release)	Mar. 7, 1883
47, 979	Maud, Herman	Chicago, Ill.	Hook snuff		May 20, 1883
47, 980	Munger, D. B.	Munford, N. Y.	Harvesting, bean		Apr. 18, 1883
47, 981	Munger, George	New Haven, Conn.	Paper lining, substitute for. (Antedated October 4, 1883)		Oct. 17, 1883
48, 486	Munger, George	New Haven, Conn.	Print baskets. (Antedated October 13, 1883)		Oct. 17, 1883
48, 521	Munger, Lyman F., assignor to self and Walter K. Marvin	Rochester, N. Y.	Locks		Feb. 21, 1883
48, 571	Munger, W. T., assignor to self and James Graham	Brantford, Conn.	Door knobs, extension		July 18, 1883
48, 581	Munoz, Manuel J., copier	Cuba	Cigarettes, machine for making		June 6, 1883
48, 189	Munoz, Francis S., and	Granville, Mass.	Printing paper hanging machine for		June 13, 1883
51, 609	Munson, David	Boston, Mass.	Rulers, metallic		Dec. 19, 1883
47, 981	Munson, Ira F.	Indianapolis, Ind.	Musical instrument		May 21, 1883
48, 583	Murdock, James, Jr., and Wm. W. Spencer	Washington, D. C.	Baggage checks		Aug. 22, 1883
48, 583	Murdock, John	Cincinnati, Ohio	Stunnet, kettle, portable		June 20, 1883
51, 340	Murdock, Wm.	South Carver, Mass.	Spinning bobbins		Dec. 2, 1883
50, 208	Murphy, Griffith, assignor to self and Wm. D. Slack	Winchendon, Mass.	Harvesting machines		Sept. 24, 1883
47, 153	Murphy, Griffith M., assignor to Lyman S. Paine	Lewisburg, Pa.	Drill, seed		Apr. 4, 1883
	Murphy, John and William, and John H. Cox. (See Cox & Murphy.)	Lewisburg, Pa.			
47, 780	Murphy, John D.	Pottsville, Pa.	Car wheels, railroad, manufacture of		May 16, 1883
51, 341	Murphy, T. W.	New Egypt, N. Y.	Gollars, horse, making		Dec. 5, 1883
47, 823	Murray, Edgar, assignor to Frederick Wuesthoff	New York, N. Y.	Skates		May 5, 1883
48, 823	Murray, Edgar, assignor to Wm. J. Coombs	New York, N. Y.	Skates		Sept. 5, 1883
48, 323	Murray, Francis G.	Washington, D. C.	Gunpowder, manufacture of		June 20, 1883
51, 332	Murray, George	Cambridge, Mass.	Press for forming metal basing		Dec. 3, 1883
48, 684	Murray, John	New York, N. Y.	Car springs		June 6, 1883
	Murray, Michael and E. J., and John J. Johnson. (See Johnson & Murray.)	New York, N. Y.			
51, 472	Murray, Peter	Milwaukee, Wis.	Grates		Dec. 12, 1883
48, 949	Murray, Robert, assignor to self and James W. Tufts	Boston, Mass.	Faucets		Jan. 17, 1883
48, 980	Musket, Robert, and L. D. Hoyt. (See Hoyt & Murray.)	England	Steel, &c., manufacture of		Aug. 15, 1883
50, 946	Myer, Albert J.	Washington, D. C.	Signals		Nov. 14, 1883
48, 431	Myer, Henry B.	Cleveland, Ohio	Steam generator		Aug. 15, 1883
46, 379	Myers, H. S.	Schoulerd, Mich.	Traps, animal, self-setting		Feb. 14, 1883
47, 281	Myers, H. S., and M. Vedder. (See Blythe, John E., assignor.)	Plagah, Ohio	Sugar, wine, and oil from sorghum, apparatus for manufacturing		Apr. 18, 1883
46, 132	Myers, Isaac	Pittsburg, Pa.	Planter, cotton seed. (Antedated January 19, 1883)		Jan. 31, 1883
50, 651	Myers, Isaac, and Marshall D. Wellman	Allegheny, Pa.	Piston packing		Oct. 9, 1883
50, 651	Myers, J. B., and J. L. Smith. (See Sick, Reuben, assignor.)	New York, N. Y.	Sifter, flour		Sept. 13, 1883
50, 925	Myers, James, assignor to self and Samuel N. Lightner	Philadelphia, Pa.	Cars, railroad	(Release)	Mar. 4, 1883
51, 910	Myers, James, Jr.	Philadelphia, Pa.	Cars, railroad	(Extension)	June 16, 1883
48, 800	Myers, Lawrence	Philadelphia, Pa.	Cars, freight		July 16, 1883
50, 788	Myers, Lawrence	Philadelphia, Pa.	Sorghum evaporator		Oct. 31, 1883
48, 816	Myers, L. N.	Wilmington, Ohio	Hay forks, horse		Mar. 14, 1883
48, 816	Myers, M. D.	Wilmington, Ohio	Engines, steam, automatic stop-motion for		June 27, 1883
46, 821	Nadow, Alexander	Springfield, Mass.	Tobacco pipe		Mar. 9, 1883
51, 075	Nagler, Robert	Brooklyn, E. C., N. Y.	Land, apparatus for reeling		Nov. 21, 1883
51, 343	Napier, Henry, and John J. Hollins	Philadelphia, Pa.	Glass, manufacture of		Dec. 3, 1883
46, 017	Narator, Andrew	Berlin Heights, Ohio	Rack, hay		Jan. 24, 1883

## List of patentees of inventions, designs, and reissues, 1865—Continued.

No.	Patentee.	Residence.	Invention or discovery.	Date.
47, 743	Nash, A. Prescott.	Weymouth, Mass.	Boot-leg.	May 16, 1865.
47, 743	Nash, Duane. (See Clement, Daniel B., assignor.)	Weymouth, Mass.	Boot-leg.	May 16, 1865.
45, 738	Nash, William.	Watertown, N. Y.	Punches, hand.	Jan. 3, 1865.
51, 741	Nason, James H.	Franklin, Mass.	Coffee percolator.	Dec. 26, 1865.
48, 085	Natcher, Gabriel.	Stiney, Ohio	Signals, railroad.	June 6, 1865.
48, 831	Natcher, Gabriel.	Stiney, Ohio	Mills one draw.	July 18, 1865.

45, 857	Price, Henry	New York, N. Y.	Barrels, &c., for containing petroleum, composition for lining	Jan. 10, 1865.
48, 308	Prevost, Eugene M. (See Tyler, Henry B., assignor.)	Adrian, Mich.	Mosquito bar or tent	June 20, 1865.
51, 212	Price, Daniel. (See Nichols, William W., assignor.)	Petaluma, Cal.	Crushing and baling machines	Nov. 28, 1865.
50, 662	Price, Jacob, Jr.	Edgefield district, S. C.	Tanning	Oct. 24, 1865.
49, 152	Price, James A., and George Bunch. (See Bunch & Price.)	Jersey City, N. J.	Barrels, petroleum, composition for lining	Aug. 1, 1865.
50, 162	Price, Robert	Macomb, Ill.	Washing machine	Sept. 26, 1865.
46, 701	Price, Thomas J.	Cincinnati, Ohio	Mangle	Jan. 17, 1865.
46, 701	Price, William	Cincinnati, Ohio	Washing and cleansing clothes, &c., machine for	Mar. 7, 1865.
50, 079	Priest, David H., assignor to self and B. S. Harrington	Watertown, Mass.	Leather holder	Sept. 19, 1865.
51, 213	Prindle, Franklin B.	New Haven, Conn.	Fire-arms, breech-loading	Nov. 28, 1865.
45, 750	Proctor, John S. (See Shattuck, Job, assignor.)	Chicago, Ill.	Ploughs, gang, cultivator	Jan. 3, 1865.
46, 856	Prosser, T. T.	Chicago, Ill.	Lubricating machinery, method of	Mar. 14, 1865.
46, 307	Prosser, Mason C., and Keyes A. Darling	Fond du Lac, Wis.	Spark arresters	Feb. 7, 1865.
46, 307	Proust, Pierre E.	Hanover	Spark arresters	Feb. 7, 1865.
48, 437	Prumann, August, assignor to B. Schaffer and C. Budenberg	Hanover	Melodons	June 27, 1865.
48, 437	Prumann, August, assignor to B. Schaffer and C. Budenberg	Milwaukee, Wis.	Strap valve	Mar. 21, 1865.
46, 938	Pritz, Peter J.	Somerville, Mass.	Grate bars	Mar. 21, 1865.
46, 939	Puffer, A. D.	Somerville, Mass.	Ment and vegetable alcohol	Jan. 3, 1865.
45, 751	Puffer, A. D.	Germanstown, Pa.	Harrow, adjustable	Dec. 26, 1865.
51, 750	Pullinger, George B., and Ben Field. (See Field & Pullman.)	St. Paul, Ind.	Planters, grain	Nov. 14, 1865.
50, 954	Pulse, Hiram	Avon, N. Y.	Hook, retaining and releasing	Feb. 14, 1865.
46, 385	Pulle, Joseph H., <i>et al.</i> (See Groneweg, Fulte, and Jones.)	Reading, Pa.	Auto-relievo, composition in	Apr. 11, 1865.
2, 052	Purcell, Noah H.	Cambridge, Mass.	Timepieces, universal	Feb. 21, 1865.
46, 496	Purdy, Helen P. W.	Huntingdon, Pa.	Tobacco hooks	Mar. 21, 1865.
46, 496	Purdy, W. B.			
46, 496	Purinton, James, Jr. (See McKay, Gordon, assignor.)			
46, 496	Pusey, J. G., and G. W. Hughes. (See Hughes & Pusey.)			
46, 496	Pusey, J. G., and Charles Jackson. (See Jackson & Pusey.)			
46, 940	Putnam, A., Jr.	Chester, Vt.		

## List of patentees of inventions, designs, and reissues, 1865—Continued.

No.	Patentee.	Residence.	Invention or discovery.	Date.
47,070	Putnam, S. S.	Dorchester, Mass.	Curtain fixture, window.	Mar. 28, 1865.
46,365	Putnam, S. S., and Lucius H. Dwyer, assigns to S. S. Putnam & Co.	Dorchester, Mass.	Household machine for making nails for.	Mar. 28, 1865.
50,732	Pyle, Isaac N.	New Hartford, N. Y.	Spinning machine.	Feb. 14, 1865.
51,566	Quam, William, and William T. Smith, assignors to selves, A. R. Wetmore, and C. C. Lathrop.	Philadelphia, Pa.	Cake cutter and rolling-plate.	Oct. 31, 1865.
51,214	Quant, Frank.	Painesville, Ohio.	Furnace, melting and smelting.	Nov. 28, 1865.
51,084	Quick, Thomas H.	New York, N. Y.	Baling cotton, hoop lock for.	Nov. 21, 1865.
49,153	Quimby, David S.	Brooklyn, N. Y.	Decasting eggs, &c.	Aug. 1, 1865.
50,723	{ Quimby, L. V., and William W. Marston }	Boston, Mass.	Fatening, blind.	Oct. 31, 1865.
51,130	Quimby, Ira B., assignor to self and Edward Low.	West Fairfax, Va.	Fish decoy.	Nov. 21, 1865.
47,566	Quincy, George H., et al. (See Shinn, John, assignor.)	East Boston, Mass.	Stone gatherer. (Antedated April 26, 1865).	May 2, 1865.
47,220	Quinn, William.	Pleasant Grove, Pa.		
46,497	Quinn & Co. Company. (See Hall, William D., assignor.)	Philadelphia, Pa.	Velocipedes.	Apr. 11, 1865.
46,353	Race, Washburn.	Lockport, N. Y.	Skates.	Feb. 21, 1865.
48,507	Radburn, William.	Rahway, N. J.	Mangle.	Feb. 7, 1865.
49,919	Radford, John, and Henry Helman. (See Helman & Radican.)	Lynn, Mass.	Carriage wheels.	June 13, 1865.
46,082	Radford, Charles L.	New York, N. Y.	Boiler feeders, automatic.	Sept. 12, 1865.
51,215	Rahm, Charles. (See Seymour, Edward L., assignor.)	Brooklyn, N. Y.	Hall.	June 6, 1865.
46,977	Ralphy, Samuel.	New Orleans, La.	Chair, nursery.	Nov. 28, 1865.
48,777	Ralston, Andrew.	Carlisle, Pa.	Gate, flood.	July 25, 1865.
50,782	Ralya, John I.	Allegheny, Pa.	Staves, cutting.	Oct. 31, 1865.
48,438	Ransbottom, John.	Virginia City, Nevada.	Metals, process for refining.	June 27, 1865.
46,368	Ransley, George M.	England.	Hammering metal, machinery for.	July 25, 1865.
49,300	Ransley, George M.	New York, N. Y.	Railroad rail joint.	Feb. 14, 1865.
43,491	Ransley, Nathan R., assignor to Daniel Pomroy.	New York, N. Y.	Boat, torpedo.	Aug. 8, 1865.
46,498	Ransley, Robert.	Orange, Mass.	Damper.	June 27, 1865.
51,477	Rand, A. C.	New Wilmington, Pa.	Bag holders.	Feb. 21, 1865.
46,719	Rand, W. J., assignor to the New York Decasting Company.	Union Mills, Pa.	Weather prophets.	Dec. 12, 1865.
48,452	Rand, W. T. and L. H.	Brooklyn, N. Y.	Extracts, vegetable, decasted, preparation of.	July 11, 1865.
51,478	Randall, Daniel R., assignor to self and Samuel W. Russell.	Brooklyn, N. Y.	Decasting kilns.	June 27, 1865.
50,753	Randall, George E.	Manchester, N. H.	Saws, circular, contring.	Dec. 12, 1865.
48,273	Randall, George E.	Augusta, Me.	Fatener, blind.	Oct. 31, 1865.
48,273	Randall, O. E.	Shelburne, N. Y.	Bags, holding and filling. (Antedated June 6, 1865).	June 13, 1865.
47,807	Randall, Pinna M., and Zezua Wheeler. (See Wheeler & Randall.)	Grand Rapids, Mich.	Churn and butter-worker combined.	Aug. 22, 1865.
47,807		Lewiston, Maine.	Bakes, horse.	May 23, 1865.

# COMMISSIONER OF PATENTS.

47, 558	Randall, R. G.	New York, N. Y.	Cars, railroad, mode of propelling	May 27, 1863.
50, 368	Randell, G. H., & al. (See Oliver, William G., assignor.)	Brighton, Ill.	Harvester rates	Oct. 10, 1863.
46, 028	Randolph, M., ass't to self, J. Padlock, and Prescott & Bunnell.	St. Louis, Mo.	Hayre cutting machine. (Antedated May 30, 1863.)	July 30, 1863.
47, 128	Rank, Amos	Salem, Ohio	Harvesting machine	Apr. 4, 1863.
47, 128	Rankin, Andrew	New York, N. Y.	Harvesting machine	Nov. 28, 1863.
47, 123	Rankin, James	Detroit, Mich.	Composition, deodorizing	Apr. 25, 1863.
47, 123	Rankin, John	New York, N. Y.	Valves, slide, balanced	Apr. 4, 1863.
50, 935	Ransom, Ezra	Flint, Mich.	Chair seats, machines for making	Nov. 14, 1863.
48, 720	Ransom, Franklin	Buffalo, N. Y.	Pumps	July 11, 1863.
49, 301	Ransom, Franklin	Buffalo, N. Y.	Pumps, air	Aug. 8, 1863.
49, 167	Ransom, Louis	Laurensburg, N. Y.	Air, compressed, reservoirs for	Sept. 5, 1863.
49, 920	Ransom, L. E.	Trenton, Mich.	Washing machine	Sept. 12, 1863.
50, 315	Ransome, Frederick	England	Stone, artificial, manufacture of. (Patented in England April 9, 1861.)	Oct. 3, 1863.
50, 316	Ransome, Frederick	England	Stone, artificial, manufacture of. (Patented in England February 24, 1861.)	Oct. 3, 1863.
2, 034	Rathbone, Lewis	Albany, N. Y.	Stove, cooks', plates of a	Feb. 28, 1863.
2, 035	Rathbone, Lewis	Albany, N. Y.	Stove, cooks', plates of a	Feb. 28, 1863.
47, 567	Rathbone, Lewis, and William Halles	Albany, N. Y.	Stove, cooking	May 2, 1863.
51, 085	Rathbone, Lewis, and William Halles	Albany, N. Y.	Stove, coal	Nov. 21, 1863.
46, 264	Rathburn, A. C. G., and A. M. Comstock	Lyme, Ct.	Belt coupling	Feb. 7, 1863.
46, 387	Rauch, Peter	South Lebanon, Pa.	Tobacco, mode of curing	Feb. 14, 1863.
48, 239	Rawson, D. W., et al. (See Colby, Daniel C., assignor.)	Springfield, Mass.	Collars and cuffs, water-proof	June 13, 1863.
48, 239	Ray, George W., assignor to Ray & Taylor	Springfield, Mass.	Collars and cuffs, water-proof	June 13, 1863.
48, 239	Ray, G. W., et al. (See Hutchinson, S. B., assignor.)	Springfield, Mass.	Collars and cuffs, water-proof	June 13, 1863.
48, 239	Ray, G. W., and V. N. Taylor. (See Hook, A. H., ass't.) Release.	Springfield, Mass.	Collars and cuffs, water-proof	June 13, 1863.
48, 239	Ray, G. W., and V. N. Taylor. (See Hook, A. H., ass't.) Release.	Springfield, Mass.	Collars and cuffs, water-proof	June 13, 1863.
2, 104	Ray, James S.	East Haddam, Conn.	Coffin handle	June 27, 1863.
48, 093	Ray, John P., assignor to self and Wesley W. Ray	Honey, N. Y.	Racks, sheep	June 6, 1863.
50, 956	Ray, Samuel, and Eli Grant	Alliance, Ohio	Harvesters	Nov. 14, 1863.
51, 350	Ray, Thomas S., and Samuel E. Cleveland	Buffalo, N. Y.	Valves, safety, spring balances	Dec. 5, 1863.
51, 351	Ray, Thomas S., and Samuel E. Cleveland	Buffalo, N. Y.	Light, head, locomotive	Dec. 5, 1863.
49, 768	Ray, Thomas S., and Jonathan Mayhew. (See Stuber & Frank, assignors.) Release.	Philadelphia, Pa.	Registers for libraries	Sept. 5, 1863.
49, 768	Ray, William F.	Philadelphia, Pa.	Registers for libraries	Sept. 5, 1863.
51, 267	Raymond, Campbell & Co. (See Smith & Brown, ass'ts.) Design.	Brooklyn, N. Y.	Forging apparatus	Nov. 28, 1863.
45, 858	Raymond, Edward A., assignor to self and Chas. Merrill & Sons	Cleveland, Ohio	Gates, fence	Jan. 10, 1863.
48, 309	Raymond, Fitch, and August Miller	Cleveland, Ohio	Gates, fence	June 20, 1863.
48, 592	Raymond, Fitch, and August Miller	Cleveland, Ohio	Stoves, cook, hood for	July 4, 1863.
46, 389	Raymond, Fitch, and August Miller	Brooklyn, N. Y.	Nut, self-locking	Feb. 14, 1863.
50, 494	Rayner, Joseph	Piqua, Ohio	Presses, lard	Oct. 17, 1863.
51, 217	Read, Charles A.	Lockport, N. Y.	Drill jar	Nov. 28, 1863.
50, 163	Read, Dan.	New York, N. Y.	Boots and shoes, manufacture of	Sept. 26, 1863.
48, 134	Read, Dan., assignor to Amos A. Taylor.	New York, N. Y.	Spinning, &c., rolls for machines for preparing fibrous material for	June 6, 1863.
49, 551	Read, Henry	Ypsilanti, Mich.	Thrashing machines	Aug. 22, 1863.
51, 751	Read, John B.	Tuscaloosa, Ala.	Paper, manufacture of	Dec. 26, 1863.

## List of patentees of inventions, designs, and reissues, 1865—Continued.

No.	Patentee.	Residence.	Invention or discovery.	Date.
48, 094	Reckendorfer, Joseph. (See Rosenthal, Joseph, assignor.) Re-issue of design.			
48, 095	Reid, B. B., and Thomas Hansbrow. (See Hansbrow & Reid.)	Newcastle, Ind.	Churns, mode of operating.	June 6, 1865.
46, 702	Reid, Jerome, and Redding, Nathaniel W.	Chapelwood, Mass.	Sand-paper holders	Mar. 7, 1865.
47, 454	Redding, J., & al. (See Colby; Daniel C., assignor.)	Charlestown, Mass.		
46, 430	Redlich, Henry	Chicago, Ill.	Printing press	Apr. 25, 1865.
46, 430	Redliff, George H.	Chicago, Ill.	Fuel, artificial	June 27, 1865.
46, 154	Redliff, George H.	Boston, Mass.	Dyes and colors, preparation and manufacture of	Oct. 17, 1865.
46, 155	Redliff, George H.	Roxbury, Mass.	Wash regulators	Aug. 1, 1865.
45, 179	Redliff, George H.	Roxbury, Mass.	Wash receptacles	Aug. 1, 1865.
51, 479	Redliff, James H.	West county, Del.	Fruit slicer	Dec. 13, 1865.
51, 519	Redliff, James H., assignor to self and David R. Tyler	Warren, Mass.	Wet trimmer	Dec. 13, 1865.
51, 528	Redliff, John C., assignor to self and Joshua T. Billard	Stamford, Ct.	Window blind	Nov. 23, 1865.
47, 455	Redliff, John H.	New Haven, Ct.	Car coupling	Apr. 25, 1865.
47, 221	Redliff, J. P., & al. (See Lyon, B. N., assignor.)	Charlestown, Mass.	Gloves, kid, dyeing	Apr. 11, 1865.

47, 981	Reidyder, Charles, and Henry A. Webber. (See Webber & Reid,nyder.)	Detroit, Mich.	Tube sheet cutter	May 30, 1863
47, 981	Reidyder, Charles, and Henry A. Webber. (See Webber & Reid,nyder.)	New York, N. Y.	Rubber articles, hard, manufacture of	Apr. 25, 1863

*List of patentees of inventions, designs, and reissues, 1865—Continued.*

No.	Patentee.	Residence.	Invention or discovery.	Date.
46, 823	Rice, J. Marcus. ( <i>See</i> Pratt, Daniel R., assignor.)	Boston, Mass.	Journal box	Mar. 14, 1865.
49, 591	Rice, Matthias J., and W. H. Millen.	Boston, Mass.	Journal box	Aug. 22, 1865.
50, 734	Rice, Matthias J., and Wm. H. Millen, assignors to Matthias J. Rice	Cincinnati, Ohio	Sifter flour	Oct. 31, 1865.
48, 441	Rice, Uriah.	Concord, Ill.	Drills, wheat	June 27, 1865.
46, 588	Rice, Dwight B. ( <i>See</i> Abbott, Warren N., assignor.)	Conway, Mass.	Spinning machines	Feb. 28, 1865.
46, 133	Rich, J. F.	Chatham Run, Pa.	Soap, fullers' process for the manufacture of	Jan. 31, 1865.
2, 053	Richard, John C.	New York, N. Y.	Trade mark	Apr. 11, 1865.
47, 860	Richard, Charles B.	Hartford, Conn.	Optical instruments, adjustments for	May 23, 1865.
49, 039	Richard, Charles L. ( <i>See</i> Parmelee, Dubois D., assignor.)	North Attleboro, Mass.	Collars and bosoms, shirt	July 25, 1865.
47, 659	Richard, C. M. and G.	Harpersville, N. Y.	Animal power	May 9, 1865.
46, 391	Richard, Egbert S. ( <i>See</i> White, Wm. B., assignor.)	Columbus, Ohio	Plane stocks, machines for mortising	Feb. 14, 1865.
46, 352	Richard, Eugene H. ( <i>See</i> Hatfield, Chas. B., assignor.)	Columbus, Ohio	Plane stocks, machines for mortising	Feb. 14, 1865.
49, 592	Richard, J. D., & al. ( <i>See</i> Jones, Thomas J., assignor.)	Litchfield, Ill.	Fastenings, seal	Aug. 22, 1865.
47, 660	Richard, Stephen M., assignor to self and Thomas W. Jones	New York, N. Y.	Cigarettes	May 9, 1865.
50, 432	Richard, T. C.	England	Fire-arms, breech-loading	Oct. 10, 1865.
47, 040	Ric'ards, Westley	New York, N. Y.	Glass, method of preventing the corrosion or staining of the surface of	Mar. 28, 1865.
2, 005	Richards, W. D., & al. ( <i>See</i> Clark, William C., assignor.)	Enfield, N. H.	Leather-splitting machines	Sept. 15, 1865.
50, 957	Richardson, Alpha, deceased, by Hubbard Harris, administrator.	Boston, Mass.	Syringes, enemata	June 20, 1865.
50, 844	Richardson, Francis B.	Boston, Mass.	Syringes, enemata, mould for	Nov. 14, 1865.
47, 569	Richardson, G. W.	Grayville, Ill.	Harvesters	Nov. 7, 1865.
48, 209	Richardson, Hamilton.	Janeville, Wis.	Buildings, apparatus for heating	May 2, 1865.
46, 442	Richardson, H., & al. ( <i>See</i> Rugg, Datus E., assignor.)	Florence, Mass.	Lock	June 13, 1865.
46, 442	Richardson, H. D.	Sherman, N. Y.	Wooling machine	June 27, 1865.
49, 196	Richardson, M. A.	Gloucester, Mass.	Steering apparatus	Aug. 1, 1865.
2, 021	Richardson, M. S., and E. A. Pond. ( <i>See</i> Pond & Richardson.)	New York, N. Y.	Hinges for blinds, &c., ends of	Nov. 21, 1865.
2, 022	Richardson, M. S. and E. A. Pond. ( <i>See</i> Pond & Richardson.)	New York, N. Y.	Locks, cases and nothings of	Nov. 21, 1865.
2, 023	Richardson, Nathan, assignor to self and Ell F. Stacy	New York, N. Y.	Lock, hasp	Dec. 26, 1865.
46, 943	Richardson, N. P., & Co. ( <i>See</i> Stevens, Wm. W., assignor.) Design.	Chicago, Ill.	Ment, machine for cutting	Mar. 21, 1865.
50, 273	Richardson, R. E. ( <i>See</i> Gowdy & Welch, assignors.) Release.	Went Meriden, Conn.	Latches, knob	Oct. 2, 1865.
51, 521	Richardson, Samuel M.	Lowell, Mass.	Valves, steam or water	Nov. 25, 1865.
51, 521	Richardson, Wm. E.			
	Richmond, Henry. ( <i>See</i> Fuller, Robert P., assignor.)			
	Ricker, Charles E.			

49,903	Ricker, J. W., and T. B. Lewis	Chillicothe, Mass.	Corn shellers	Aug. 9, 1865
49,904	Riddle, J. J.	Cincinnati, Ohio	Lamps, vapor	Aug. 9, 1865
50,845	Riddle, J. J.	Cincinnati, Ohio	Burners, gas, vapor	Nov. 7, 1865
51,229	Ridell, Archibald	Chicago, Ill.	Lock, seal	Nov. 29, 1865
45,797	Rider, Joseph, assignor to self and E. Remington & Sons	Newark, Ohio	Fire-arms, breech-loading	Jan. 3, 1865
46,539	Rider, Joseph, assignor to self and E. Remington & Sons	Newark, Ohio	Fire-arms, breech-loading	Feb. 21, 1865
51,969	Rider, Joseph, assignor to self and E. Remington & Sons	Newark, Ohio	Fire-arms, revolving	Nov. 29, 1865
47,075	Rider, Wm. E. (See Mancel, Antonio, assignor.)	Chillicothe, Mass.	Pumps	Mar. 28, 1865
49,789	Rider, Wm. E. (See Mancel, Antonio, assignor.)	Richmond, Ind.	Stud, shirt-collar	Sept. 5, 1865
47,365	Ridger, Joseph, and Samuel F. Estell	Philadelphia, Pa.	Boilers, steam, low-water indicators for	Apr. 18, 1865
50,653	Ridout, M. T., and E. Valentine. (See Valentine & Ridout.)	Philadelphia, Pa.	Feed-water apparatus. (Antedated May 11, 1865)	Sept. 19, 1865
50,654	Ridout, M. T., and E. Valentine. (See Valentine & Ridout.)	Philadelphia, Pa.	Boiler feeders, automatic. (Antedated May 11, 1865)	Sept. 19, 1865
50,655	Ridout, M. T., and E. Valentine. (See Valentine & Ridout.)	Philadelphia, Pa.	Boiler feeders, automatic. (Antedated July 26, 1865)	Sept. 19, 1865
47,375	Riedel, G. Adolph	Philadelphia, Pa.	Car springs	Apr. 18, 1865
47,570	Riedel, G. Adolph, assignor to A. Merritt Amy	Edwards, N. Y.	Buckle, tug	May 2, 1865
50,497	Ries, Clark D. W.	Belvidere, N. J.	Bolt-cutter	Oct. 17, 1865
47,984	Rigby, Joseph. (See Milburn, Benjamin T., assignor.)	Omaha City, Neb.	Press, sugar	May 30, 1865
51,530	Riggs, D. C., and L. S.	Oxford, Conn.	File, paper and letter	Dec. 12, 1865
50,164	Riggs, Homer, assignor to self and William Church	Florence, Mass.	Sewing machines, ruffling device for	Sept. 26, 1865
49,790	Riggs, Leonard C.	Blanchester, Ohio	Grappling apparatus, naval	Sept. 5, 1865
50,423	Rigter, G., et al. (See Gilbert, George W., assignor.)	Newark, N. J.	Hinges	Oct. 10, 1865
50,958	Riley, J. M., assignor to self and W. A. Schmidt	Morrow, Ohio	Maltng apparatus	Nov. 14, 1865
45,939	Rinehart, Martin	Monroe, Mich.	Car coupling	Jan. 17, 1865
49,683	Rinehart, William D., assignor to self, D. Z. Backell, and William W. Martin	Pittsburg, Pa.	Iron for strap joints	Aug. 29, 1865
48,838	Ring, Asa T.	Newtownville, Mass.	Tree protectors	July 18, 1865
47,172	Ring, David	Danvers, Me.	Auger, ground. (Antedated March 26, 1865)	Apr. 4, 1865
48,979	Ring, Francis C.	Pottland, Me.	Dough kneader	July 25, 1865
46,943	Rino, Moritz	Williamsburg, N. Y.	Vinegar, manufacture of	Mar. 21, 1865
46,142	Riordan, Peter	Washington, D. C.	Valve, safety, regulators	Jan. 31, 1865
2,122	Ripley, Ezra	Troy, N. Y.	Kettles, tea. (Teisene)	Dec. 5, 1865
46,383	Ripley, John L.	Fremont, Ohio	Hay forks, horse	Feb. 14, 1865
48,210	Ripley, John L.	Fremont, Ohio	Ladder, extension	June 13, 1865
45,752	Rippon, Wm. F., and Thomas R. Robinson	Providence, R. I.	Spinning frames, self-oiling spindle bolsters for	Jan. 3, 1865
49,651	Risley, Caleb M.	Woodbury, N. J.	Linch pins, securing	Aug. 29, 1865
45,753	Ritchie, Edward S.	Brookline, Mass.	Compass, instruments for determining the variations of the	Jan. 3, 1865
48,443	Ritchie, Edward S.	Brookline, Mass.	Binnacles	Jan. 27, 1865
49,157	Ritchie, Edward S.	Brookline, Mass.	Compasses, azimuth	Aug. 1, 1865
48,444	Ritter, Andrew J.	Railway, N. J.	Carriage springs	June 27, 1865
50,628	Ritter, Christian	Reading, Pa.	Burners, gas	Oct. 24, 1865
47,661	Ritter, Samuel S.	Philadelphia, Pa.	Studs and buttons	May 9, 1865
49,437	Ritterhoff, F. W., and C. A. Colquitt, assignors to selves and Wm. Malchahey	Philadelphia, Pa.	Trusses	Aug. 15, 1865
1,903	Ritterhoff, F. W., and C. A. Colquitt, assignors to selves and Wm. Malchahey	New York, N. Y.	Tobacco, machine for cutting	Mar. 14, 1865
47,131	Ritterhoff, F. W., C. A. Colquitt, and Wm. Malchahey	New York, N. Y.	Tobacco, machine for cutting	Apr. 4, 1865

## List of patentees of inventions, designs, and reissues, 1865—Continued.

No.	Patentee.	Residence.	Invention or discovery.	Date.
51, 621	Rix, J. M.	Boston, Mass.	Locks, key guards for	Dec. 19, 1865.
47, 334	Robbins, Elisha.	Worcester, Mass.	Carriages	Apr. 16, 1865.
49, 310	Robbins, Elisha.	Worcester, Mass.	Carriages	June 30, 1865.
48, 722	Robbins, E. T.	Cincinnati, Ohio	Ventilating apparatus	July 11, 1865.
1, 947	Robbins, Louis.	New York, N. Y.	Barrels to contain petroleum, coal oil, &c., preparing	Jan. 3, 1865.
47, 132	Robbins, Louis.	New York, N. Y.	Process for preserving wood	Apr. 4, 1865.
	Robbins, Louis.	New York, N. Y.	Rolls, tanners' oil from	Oct. 30, 1865.
	Robbins, Louis.	New York, N. Y.	Rolls, tanners' oil from	(Extension)
47, 247	Robbins, Martin, assignor to self and Mahlon M. Wombough.	New York, N. Y.	Rolls, tanners' oil from	Oct. 30, 1865.
48, 877	Robbins, Richard C., assignor to J. M. and G. W. Keen.	New York, N. Y.	Rolls, distilling acid from	(Extension)
50, 629	Roberts, Andrew J.	New York, N. Y.	Rolls, distilling acid from	(Extension)
50, 630	Roberts, Andrew J.	Cincinnati, Ohio	Weighters, grain, automatic	Apr. 11, 1865.
47, 071	Roberts, Andrew J., assignor to Benjamin F. Brown.	New York, N. Y.	Gauge, pressure, diaphragm	July 18, 1865.
2, 067	Roberts, Benjamin S.	Boston, Mass.	Sweeping machine, street	Oct. 24, 1865.
2, 068	Roberts, Benjamin S.	Boston, Mass.	Sweeping machine, street	Oct. 24, 1865.
45, 860	Roberts, Cyrus	Boston, Mass.	Horsehoes, machines for making	Mar. 26, 1865.
45, 861	Roberts, Cyrus	Boston, Mass.	Horsehoes, machines for making	Sept. 5, 1865.
48, 445	Roberts, Cyrus	United States Army	Fire-arms, breech-loading	Sept. 5, 1865.
47, 458	Roberts, Edward A. L.	Three Rivers, Mich.	Fire-arms, breech-loading	(Division 2 of reissue)
49, 924	Roberts, Edwin, assignor to self and Henry Coy	Three Rivers, Mich.	Cultivators	Jan. 10, 1865.
2, 062	Roberts, Elijah, assignor through mesne assignments to A. L. Stout, Wm. M. Mills, and J. Temple.	Three Rivers, Mich.	Cultivators	Jan. 10, 1865.
46, 707	Roberts, Esak C.	Three Rivers, Mich.	Torpedoes in artesian wells, exploding	June 27, 1865.
	Roberts, Geo. P., and M. O. Waggoner. (See Dillingham, Hiram P., assignor.)	New York, N. Y.	Lamps, hand, coal-oil	Apr. 25, 1865.
	Roberts, James C.	Moorestown, N. J.	Water wheels, gates for	Sept. 12, 1865.
50, 274	Roberts, Martin J.	Dayton, Ohio	Water wheels, gates for	Aug. 29, 1865.
49, 438	Roberts, Marvin S.	Salem, Mich.	Preserving fruits, &c., method of	Mar. 7, 1865.
46, 499	Roberts, Thomas	Adamstown, Md.	Mills, grinding	Oct. 3, 1865.
51, 353	Roberts, Thomas D.	Penlawn House, England	Wool, &c., apparatus for oiling	June 20, 1865.
2, 069	Roberts, Wm. W.	Lewiston, N. Y.	Pest, apparatus for preparing	Aug. 15, 1865.
	Robertson, D. M., et al. (See Bidwell, J. A., assignor.)	Shelby, Ohio	Stove drum	Feb. 21, 1865.
47, 861	Robertson, D. M., and J. A. Bidwell	Middletown, N. Y.	Wood-bending machines	Dec. 5, 1865.
30, 036	Robertson, John, and Robert W. Gardener. (See Gardener & Robertson.)	New York, N. Y.	Coffin	May 9, 1865.
	Robertson, John, and Robert W. Gardener. (See Gardener & Robertson.)	New York, N. Y.	Coffin	(Design)
	Robertson, Robert A., and Elijah F. Prentiss. (See Prentiss & Robertson.)	East Boston, Mass.	Screws, wood, machine for shaving and nicking	May 23, 1865.
	Robertson, Robert A., and Elijah F. Prentiss. (See Prentiss & Robertson.)	Boston, Mass.	Lead, sheet, machine for manufacturing	Sept. 19, 1865.
46, 629	Robertson, Robert A., and Elijah F. Prentiss. (See Prentiss & Robertson.)	Brooklyn, N. Y.	Lead, sheet, machine for manufacturing	Sept. 19, 1865.
	Robertson, Robert J., assignor to self and Jared W. Mills	Chicago, Ill.	Rakes, horse	July 4, 1865.

46, 316	Robinson, Alfred	New York, N. Y.	Reading material, mode of preparing	June 20, 1865
46, 723	Robinson, Benjamin	East Gloucester, Mass.	Flah, apparatus for curing and drying	July 11, 1865
	Robinson, R. W., and C. M. Clarke. (See Hall, A. W., assignor.)			
	Robinson, R. W., and S. P. Chaplin. (See Hall, A. W., assignor.)			
47, 229	Robinson, Charles	Springfield, Mass.	Photographic apparatus to preserve and exhibit	Apr. 11, 1865
50, 498	Robinson, Charles	Springfield, Mass.	Photographic pictures, apparatus for preserving and exhibiting	Oct. 17, 1865
45, 754	Robinson, Charles H.	Bath, Maine	Presses	Jan. 3, 1865
45, 863	Robinson, Charles H.	Bath, Maine	Press, hulling	Jan. 10, 1865
2, 105	Robinson, Charles H.	Troy, N. Y.	Press, baling	Nov. 14, 1865
49, 653	Robinson, Eli C.	Troy, N. Y.	Heaters. (Antedated August 16, 1865)	Aug. 29, 1865
49, 791	Robinson, Frank, and Wm. Jackson. (See Jackson & Robinson.)	Richmond, Ind.	Sawing machines	Sept. 5, 1865
2, 117	Robinson, F. W.	Richmond, Ind.	Sawing machines	Nov. 28, 1865
51, 354	Robinson, F. W.	Clinton, Ill.	Churns	Dec. 5, 1865
51, 354	Robinson, James J.	Clinton, Ill.	Coal screen	Dec. 5, 1865
47, 041	Robinson, John A.	Pittston, Pa.	Steering apparatus	Mar. 28, 1865
51, 481	Robinson, Prince W.	New Bedford, Mass.	Bottles, clashing	Dec. 12, 1865
46, 864	Robinson, Prince W.	New York, N. Y.	Bottles, clashing	Mar. 14, 1865
47, 333	Robinson, Robert	Boston, Mass.	Oil, fish, and other impurities, apparatus for separating	Apr. 16, 1865
	Robinson, Thomas			
	Robinson, Thomas R., and Wm. F. Rippon. (See Rippon & Robinson.)			
50, 631	Robinson, William	Bellevue, Ohio	Churns	Oct. 24, 1865
49, 559	Robinson, Wm. R., assignor to self and N. E. Worthington	Brimfield, Ill.	Thills, adjustable	Aug. 22, 1865
45, 862	Robinson, H. C.	Monmouth, Ill.	Corn-shellers, device for feeding corn to	Jan. 10, 1865
46, 484	Robison, Thomas, assignor to E. C. Wooster	New York, N. Y.	Sewing machines for making band ruffling	Feb. 14, 1865
50, 165	Roche, John A., and J. J. Stewart	Williamsburg, N. Y.	Hats, apparatus for finishing	Sept. 26, 1865
46, 839	Roche, J. F.	New York, N. Y.	Water, potable, apparatus	July 16, 1865
	Rock, G., et al. (See Lieberman, Henry, assignor.)			
	Rock Drill Manufacturing and Mining Company. (See Howson, Henry, assignor.)			
	Rock Drill Manufacturing and Mining Company. (See Foster, Charles E., assignor.)			
	Rock Drill and Mining Company. (See Foster, Charles E., assignor.)			
51, 482	Rockwell, Baker & Hill, et al. (See Saugster, James, assignor.)	Rouoke, Ind.	Strippers, cane	Dec. 12, 1865
50, 990	Rockwell, L., and A. F. Carling. (See Carling & Rockwell.)	Philadelphia, Pa.	Looms for cross weaving	Nov. 14, 1865
51, 535	Roder, Conrad, assignor to M. Landenberger	South Bend, Ind.	Booms, machines for cutting threads on	Dec. 5, 1865
	Rodgers, J. F.			
48, 775	Rodgers, L. J., et al. (See Hayes, John W., assignor.)	Springfield, Mass.	Fire-arms, revolving	July 11, 1865
48, 940	Rodler, Louis C., assignor to Samuel North	Springfield, Mass.	Sewing machines, clutch pulley for driving	July 18, 1865
	Rodler, Peter	Trenton, N. J.	Railroad chair	Oct. 31, 1865
50, 776	Roebling, John A., and John McMurry, assignors to John McMurry	Lexington, Ky.	Lanterns	Sept. 12, 1865
49, 953	Roebuck, Samuel, assignor to Rockwell Brothers & Markland	New York, N. Y.	Cigars, &c., powder for lighting	Sept. 12, 1865
47, 335	Roelling, Charles Wm	Cleveland, Ohio	Compasses	Apr. 18, 1865
50, 037	Roeseler, Paul	New Haven, Conn.	Cameras, photographic, &c., achromatic object glass for	Sept. 19, 1865
47, 336	Roettger, Hermann	Philadelphia, Pa.	Cameras, solar	Apr. 18, 1865
47, 892	Roettger, Hermann	Philadelphia, Pa.	Cigar wrapper	May 23, 1865
50, 038	Roffee, Christopher E.	Barrington, R. I.	Cigar wrapper	Sept. 19, 1865
47, 571	Rogers, Calvin B.	Deep River, Conn.	Dies, &c., tool for marking	May 2, 1865
47, 572	Rogers, Calvin B.	Deep River, Conn.	Ivory, machines for cutting	May 2, 1865
46, 425	Rogers, C. B., assignor to C. B. Rogers & Co.	Norwich, Conn.	Sawing machines	Feb. 14, 1865

40, 708	Rowan, Charles E.	Itice, machine for hulling, cleaning and polishing	Mar. 7, 1865.
51, 363	Rowbotham, John, assignor through mesne assignments to self and J. H. Spencer	Valves, slide, balanced	Dec. 5, 1865.
49, 159	Rows, A. H. G.	Fastener, sash	Aug. 1, 1865.
46, 945	Rove, Thomas	Pumps, platons for	June 6, 1865.
51, 653	Rowland, Charles	Lined, &c., apparatus for triturating and beating	Mar. 21, 1865.
47, 573	Rowland, Lyndford	Envelope and letter sheet, combination of	Dec. 19, 1865.
46, 099	Rowland, Robert	Bucket car	May 2, 1865.
51, 087	Rowland, William	Glucose and white lead, manufacture of	June 6, 1865.
		Steel, process of slapping and hardening articles of. (Antedated November 9, 1863.)	Nov. 21, 1865.
50, 040	Roxbury Carpet Comp'y. (See Pierce, Francis J., <i>supra</i> .) Design.		
48, 980	Rudgers, Charles W.	Piece folders	Sept. 19, 1865.
46, 709	Rudolph, Fred.	Locks	July 25, 1865.
46, 500	Ruff, Charles A.	Knife for opening tin cans. (Antedated February 23, 1865)	Mar. 7, 1865.
47, 135	Rugg, Datus E., assignor to self, F. S. Otis, J. I. and J. O. West, J. Wilcox & Co. and H. Richardson.	Radiators, heat	Feb. 21, 1865.
49, 305	Ruggles, Robert B.	Skirts, skeleton, forming	Apr. 4, 1865.
47, 985	Rulon, Henry M.	Stud, shirt	Aug. 8, 1865.
		Car coupling	May 30, 1865.
47, 042	Rumsey & Co. (See Eggleston, Leonard, assignor.) Design.		
50, 277	Rundell, William F.	Hay forks	Mar. 28, 1865.
50, 652	Rundell, Daniel and John	Horse-powers, brakes for	Oct. 3, 1865.
		Photographa, machine for pressing and smoothing	Oct. 24, 1865.
51, 453	Russ, James J.	Scissor-sharpener	Dec. 12, 1865.
50, 166	Russell, Charles	Chair bottom	Sept. 28, 1865.
50, 735	Russell, Dwight	Inhalers, vapor	Oct. 31, 1865.
49, 384	Russell, E. P.	Harvesting machines	Feb. 14, 1865.
49, 308	Russell, E. P.	Whirling, method of making	Aug. 8, 1865.
49, 439	Russell, E. P.	Harvesters, driving wheels of	Aug. 13, 1865.
47, 538	Russell, E. P.	Harvesters, reels for	Apr. 18, 1865.
47, 662	Russell, E. P.	Horse-powers	May 9, 1865.
50, 959	Russell, E. P.	Harvesters	Nov. 14, 1865.
49, 653	Russell, E. W., <i>et al.</i> (See Warner, H. W., assignor.)	Nut machine	Aug. 29, 1865.
	Russell, Jacob		
47, 339	Russell, J. Manufacturing Company. (See Butler, Calvin L., <i>supra</i> .)		
	Russell, Samuel W. (See Randall, Daniel B., assignor.)	Graining instrument. (Antedated December 14, 1864)	Apr. 18, 1865.
	Russell, William	Furnaces, ventilating	Jan. 21, 1865.
	Rattan, Henry	Docks, dry	Oct. 10, 1865.
50, 390	Ryan, F. D., and D. H. Clock. (See Clock & Ryan.)	Badge or breastpin	Feb. 7, 1865.
2, 029	Ryan, Michael F.	Rakes, horse	Oct. 10, 1865.
50, 351	Ryder, Andrew V.	Stalks, machines for cutting	June 20, 1865.
48, 312	Ryder, John B.	Tobacco pipe	Feb. 7, 1865.
46, 269	Sourback, Louis	Books, pocket	July 11, 1865.

Smith, H. B.	Lowell, Mass	Planing machines	Oct. 24, 1865
Smith, Hamilton E.	Cincinnati, Ohio	Washing machine	July 4, 1865

*List of patentees of inventions, designs, and reissues, 1865—Continued.*

No.	Patentee.	Residence.	Invention or discovery.	Date.
48,722	Smith, Hamilton E.	Cincinnati, Ohio	Stoves, petroleum	July 11, 1865.
50,628	Smith, Hamilton E.	Cincinnati, Ohio	Washing machine	Oct. 24, 1865.
50,964	Smith, Hamilton E.	Cincinnati, Ohio	Laundry, family	Nov. 14, 1865.
46,716	Smith, Hamilton B.	Springfield, Mass.	Plough, side-hill	Nov. 7, 1865.
47,580	Smith, Henry D.	Saunder, Conn.	Sticks and carriages	Mar. 2, 1865.
46,886	Smith, Henry D.	New York, N. Y.	Tobacco, chewing, preparing	Mar. 14, 1865.
51,360	Smith, H. C. <i>et al.</i> (See Shepard, William A., assignor.)	Norwich, Conn.	Friction clutch. (Antedated November 18, 1865)	Dec. 5, 1865.
46,398	Smith, H. J. and J. B. Myers. (See Slusher, Reuben, assignor.)	Galva, Ill.	Planters, corn	Feb. 14, 1865.
47,076	Smith, Jacob, and S. Davis. (See Pelegrew, David L., assignor.)	Great Britain	Boilers, fusible plugs for	Mar. 28, 1865.
46,275	Smith, John, deceased, by W. M. Bates and Catharine Smith, administrators.	Kingsford, N. Y.	Gunpowder, drying and glazing	Feb. 7, 1865.
47,867	Smith, John, and Edward M. Nutter.	Felonyville, Mass.	Game board. (Antedated March 3, 1865)	May 23, 1865.
48,135	Smith, John C. (See Beyer, Jacob, assignor.)	Waterbury, Conn.	Buckle	June 6, 1865.
50,743	Smith, John E., assignor to self and Henry C. Griff.	New York, N. Y.	Pest, method of treating	Oct. 31, 1865.
51,131	Smith, John H.	New York, N. Y.	Pest, treating	Nov. 28, 1865.
50,840	Smith, John, James, and Charles	Philadelphia, Pa.	Car, springing	Nov. 7, 1865.
50,850	Smith, John, James, and Charles	Philadelphia, Pa.	Car, springing	Nov. 7, 1865.
46,504	Smith, John W.	Boston, Mass.	Rivets	Nov. 9, 1865.
47,955	Smith, John W.	Iowa Point, Kan.	Harvesters, corn	Feb. 20, 1865.
47,868	Smith, John Y.	Alexandria, Va.	Wells, boring	May 20, 1865.
47,989	Smith, John Y.	Alexandria, Va.	Valves, safety	May 23, 1865.
47,870	Smith, John Y.	Alexandria, Va.	Drill, rock	May 23, 1865.
47,871	Smith, John Y.	Alexandria, Va.	Oil ejectors	May 23, 1865.
48,106	Smith, John Y.	Alexandria, Va.	Oil ejectors	June 6, 1865.
50,503	Smith, J. Y. and Herman Haupt. (See Haupt & Smith.)	Providence, R. I.	Composition, fire-kindling	Oct. 17, 1865.
46,682	Smith, Joseph M.	Jersey City, N. J.	Faucets	Oct. 14, 1865.
48,318	Smith, Joseph M.	Jersey City, N. J.	Faucets, measuring	June 30, 1865.
46,683	Smith, Joseph M.	Jersey City, N. J.	Hay, machines for raking and loading	June 14, 1865.
46,399	Smith, Joseph M., assignor to self and John F. Partridge.	Springfield, Ill.	Brick machine	Feb. 14, 1865.
46,399	Smith, K. (See Porter D'Arcy, assignor.) Release.			
46,023	Smith, Lander E., and Lucien Jordan. (See Jordan & Smith.)			
48,107	Smith, L. B. (See Hubbard, Orange B., assignor.)			
48,086	Smith, Lyman	Erie, Pa.	Oil, &c., apparatus for extracting	Jan. 24, 1865.
50,851	Smith, Lyman	Erie, Pa.	Extracts, apparatus for making	June 6, 1865.
47,873	Smith, Milton J.	Danville, N. Y.	Churn, dasher	July 25, 1865.
50,873	Smith, Moore, assignor to self and T. W. Willington.	Warren, Mass.	Rakes, horse	Nov. 7, 1865.
50,304	Smith, N. E.	Cleveland, Ohio.	Lightning rod joints	May 23, 1865.
				Oct. 10, 1865.

Smith, O. C., and J. A. Barrett. (See Barrett & Smith.)	New York, N. Y.	Furnaces, boiler.	Aug. 29, 1865.
Smith, Otis A., and Charles A. King. (See King & Smith.)	New York, N. Y.	Stover, dangles of a . . . . . (Design)	June 13, 1865.
Smith, Patrick. (See Davis, Jarvis, assignor.)	Brooklyn, N. Y.	Cart, tipped, or boat fn.	Sept. 12, 1865.
Smith, Phineas	Philadelphia, Pa.	Cart, sn.	Jan. 3, 1865.
Smith, Ralph.	Philadelphia, Pa.	Vessel for reception and transportation of night soil. (Ante-dated July 6, 1865.)	July 16, 1865.
Smith, Robert A.	Stockport, N. Y.	Stamp, revenue, machine for attaching	Apr. 25, 1865.
Smith, Robert L.	New York, N. Y.	Stamp, hand.	Aug. 15, 1865.
Smith, Samuel J. (See Horton, Marcus L., assignor.)	Cincinnati, Ohio	Coal scuttles.	Oct. 31, 1865.
Smith, Sidney. (See Horton, Marcus L., assignor.)	Detroit, Mich.	Tobacco pipe-stems	Feb. 21, 1865.
Smith, Thomas	Philadelphia Pa.	Hair, ventilating, device for.	Oct. 3, 1865.
Smith, Thomas, and Henry J. Brown			
Smith, William	New York, N. Y.	Egg-beater	Dec. 26, 1865.
Smith, William, et al. (See Higley, Peter, assignor.)	England.	Photographs	Oct. 17, 1865.
Smith, William B.	Birmingham, Conn.	Projectiles for rifled ordnance, packing.	May 16, 1865.
Smith, William T., and William Quann. (See Quann & Smith.)	Charleston, Ill.	Brake, self-acting.	Nov. 26, 1865.
Smith, W. H.	New York, N. Y.	Boxes, wood and paper	Oct. 17, 1865.
Snoot, Samuel S. (See Byrne, Thomas, assignor.)	New York, N. Y.	Collars, paper, machines for making	Dec. 5, 1865.
Snyth, C. A.	New York, N. Y.	Clutch, for connecting and disconnecting machinery	Dec. 19, 1865.
Snyth, David M.	New York, N. Y.	Ploughs, gang	Aug. 22, 1865.
Snyth, David M., assignor to self and P. C. Schuyler.	San Lorenzo, Cal.	Furnaces, puddling, iron	Aug. 22, 1865.
Snyth, Henry	Philadelphia, Pa.	Fire-arms, breech-loading	May 16, 1865.
Snedeker, Nelson S.	Baltimore, Md.	Fire-arms, method of converting muzzle into breech-loading	Jan. 24, 1865.
Snelder, C. F.	Baltimore, Md.	Fire-arms, revolving	Feb. 26, 1865.
Snelder, Charles E., assignor to self and Thomas Poultney, &c.	Baltimore, Md.	Anchor. (Patented in England July 25, 1864.)	Aug. 5, 1865.
Snelder, Charles E., assignor to self and Thomas Poultney, &c.	Great Britain.		
Snell, Edward.	Rushford, Minn.	Beehives, warm indicators for	Oct. 24, 1865.
Snell, J., et al. (See Zernie, Wm., assignor.)	Watertown, Mass.	Collar, paper, packing, envelope	July 16, 1865.
Snell, Wm. W.	Watertown, Mass.	Collars, shirt, paper.	Feb. 7, 1865.
Snow, George K., assignor to self and March Brothers, Pierce & Co.	Watertown, Mass.	Neck-tie supporters	Feb. 14, 1865.
Snow, George K., assignor to self and March Brothers, Pierce & Co.	Watertown, Mass.	Collar, paper, machines. (Ante-dated November 15, 1865.)	Nov. 26, 1865.
Snow, George K., assignor to self and March Brothers, Pierce & Co.	Watertown, Mass.	Collar, paper, machines	Nov. 26, 1865.
Snow, George K., assignor to self and March Brothers, Pierce & Co.	Watertown, Mass.	Collars, paper, dies for cutting	Nov. 26, 1865.
Snow, George K., assignor to self and March Brothers, Pierce & Co.	Watertown, Mass.		
Snowdon, John N., and Henry Wilkins.	Brownsville, Pa.	Furnaces, steam boiler, ejectors for	June 13, 1865.
Snyder, Adam.	Clyde, Ohio	Dryer, fruit.	July 11, 1865.
Snyder, Ira B., et al. (See Weber, Jacob, assignor.)	Killbuck, Ill.	Ditching machine.	Apr. 11, 1865.
Snyder, J. H.	Lakeville, Conn.	Balances, spring	Feb. 23, 1865.
Snyder, Wm. B.	Columbus, Pa.	Churn	July 25, 1865.
Soggs, Henry			

## List of patents of inventions, designs, and reissues, 1865.—Continued.

No.	Patentee.	Residence.	Invention or discovery.	Date.
51,003	Sollera, Charles H., and John Rhoads.	Harrisburg, Pa.	Cas-brakes, shoes for	Nov. 21, 1865.
46,276	Somes, Daniel E.	Washington, D. C.	Buildings or rooms for the preservation of food and for other purposes.	Feb. 7, 1865.
46,277	Somes, Daniel E.	Washington, D. C.	Refrigerators for preserving articles of food.	Feb. 7, 1865.
46,583	Somes, Daniel E.	Washington, D. C.	Ships and other vessels, cooling and ventilating.	Feb. 28, 1865.
46,584	Somes, Daniel E.	Washington, D. C.	Brewing and distilling, cooling and condensing apparatus used in.	Feb. 28, 1865.
46,585	Somes, Daniel E.	Washington, D. C.	Houses, preserving houses, packing houses, refrigerators, and other similar structures, cooling.	Feb. 28, 1865.
46,586	Somes, Daniel E.	Washington, D. C.	Dwellings, churches, hospitals, theatres, and other buildings, cooling and ventilating.	Feb. 28, 1865.
46,950	Somes, Daniel E.	Washington, D. C.	Grain and other buildings, cooling, drying, and ventilating.	Mar. 21, 1865.
46,456	Somes, Daniel E.	Washington, D. C.	Buildings and chambers, mode of cooling air in.	June 27, 1865.
46,457	Somes, Daniel E.	Washington, D. C.	Ships and other vessels, mode of cooling and ventilating.	June 27, 1865.
50,286	Somes, Daniel E.	Washington, D. C.	Air, process for cooling.	Oct. 3, 1865.
50,389	Somes, Daniel E.	Washington, D. C.	Water in wells, mode of cooling.	Oct. 10, 1865.
51,226	Somes, Daniel E.	Washington, D. C.	Heating, cooling and ventilating, apparatus for.	Nov. 28, 1865.
51,227	Somes, Daniel E.	Washington, D. C.	Air, mode of cooling.	Nov. 28, 1865.
1,909	Somes, Daniel E.	Washington, D. C.	Food, and other substances, construction of. (Reissue.)	Mar. 21, 1865.
2,096	Somes, Daniel E., assignor through means assignments to himself.	Washington, D. C.	Provisional, curing. (Resumé.)	Oct. 24, 1865.
46,613	Southwick, Edward R. (See Henze, Gustave, assignor.)	New York, N. Y.	Telegraph cables.	Feb. 28, 1865.
50,400	Southwick, O. M. (See St. John, Cornelius, assignor.)	Essex, Conn.	Combs.	Oct. 10, 1865.
50,317	Southworth, Daniel H., assignor to self, B. Lortland, and C. Ferris	Provincetown, Mass.	Skirt-making and binding, fabric for.	Oct. 3, 1865.
46,931	Spannaecl, Charles	St. Louis, Mo.	Boilers, composition for preventing incrustation.	Sept. 12, 1865.
46,931	Sparks, Reuben	Buffalo, N. Y.	Saw, machines for separating.	Mar. 21, 1865.
49,932	Sparks, William	New York, N. Y.	Coal screen. (Antedated September 6, 1865.)	Sept. 12, 1865.
50,745	Spaulding, Jacob F., and Roger W. Porter. (See Porter & Spaulding.)	Portland, Me.	Shafting, box for.	Oct. 31, 1865.
46,153	Spaulding, John	Wichendon, Mass.	Meat-chopping machine.	Jan. 31, 1865.
46,734	Spaulding, Alfred F., and Salmon M. Scott	Wichendon, Mass.	Meat chopper.	Jan. 31, 1865.
46,717	Spaulding, E. P.	St. Louis, Mo.	Cook, machines for making heads of.	July 11, 1865.
46,034	Spaulding, Henry C.	New York, N. Y.	Cartridges, metallic.	Mar. 7, 1865.
49,566	Spaulding, J. D. (See Coffin, David N. B., assignor.)	Galesburg, Ill.	Mop head.	Aug. 22, 1865.
49,566	Spaulding, William W., and Alonzo T. Boon. (See Boon & Spaulding.)	Galesburg, Ill.	Mop head.	Aug. 22, 1865.
47,173	Speakman, Thomas S.	Garden, N. J.	Lamp for burning oil.	Apr. 4, 1865.
51,024	Speakman, Thomas S., and Noah Hand	Garden, N. J.	Pump, ship.	Nov. 21, 1865.
49,163	Spiller, John Edward	Philadelphia, Pa.	Arms, artificial.	Aug. 1, 1865.
51,228	Spencer, John	Lowell, Mass.	Fire-arms, self-loading.	Nov. 29, 1865.
56,597	Spencer, C. M., assignor to Spencer Repeating Rifle Company.	Boston, Mass.	Fire-arms, self-loading.	July 4, 1865.
45,952	Spencer, C. M., assignor to Spencer Repeating Rifle Company.	Boston, Mass.	Fire-arms, self-loading.	Jan. 17, 1865.

50, 640	Spencer, E.	Philadelphia, Pa.	Mitter, flour.	Oct. 24, 1863.
	Spencer, Holland H., and Emanuel Leuner. (See Leuner & Spencer.)			
49, 043	Spencer, Isaac H., assignor to self and Andrew R. Blade	Pawtucket, R. I.	Files, machines for grinding.	July 23, 1863.
49, 054	Spencer, James E., and Edwin Want, assignor to James E. Spencer.	New Haven, Conn.	Spectacle frames, manufacture of.	Sept. 12, 1863.
47, 673	Spencer, J. H. (See Rowbotham, John, assignor.)	New York, N. Y.	Ores, apparatus for treating.	May 23, 1865.
47, 674	Spencer, Robert.	New York, N. Y.	Ores, apparatus for treating.	May 23, 1865.
47, 021	Spencer, Robert.	New York, N. Y.	Furnaces for decomposing and desulphurizing ore. (Division A of release.)	July 4, 1865.
2, 029	Spencer, Robert.	New York, N. Y.	Ores, method of decomposing and desulphurizing. (Division B of release.)	July 4, 1865.
49, 108	Spencer, Samuel	Groton, N. Y.	Threshing machine.	June 6, 1865.
	Spencer, Wu, W., and James Murdock, Jr. (See Murdock & Spencer.)			
50, 746	Spindlow, Henry, et al. (See Milson, Spindlow & Watson.)	Philadelphia, Pa.	Valves, slide.	Oct. 31, 1865.
46, 718	Sperry, T. S.	New York, N. Y.	Skirt wire, manufacture of.	Mar. 7, 1865.
47, 343	Sperry, T. S.	New York, N. Y.	Wire, machine for covering.	Apr. 18, 1865.
45, 941	Spiggle, John M.	Philadelphia, Pa.	Condensers.	Jan. 17, 1865.
51, 362	Spiggle, John M.	Philadelphia, Pa.	Boiler flues, instrument for cleaning.	Dec. 5, 1865.
48, 949	Spink, Morris A.	De Kalb, N. Y.	Stubble cutters.	July 18, 1865.
50, 179	Spippy, George.	Saugus, Mass.	Beehives.	Sept. 26, 1865.
51, 095	Spietz, J. G.	Millville, Mass.	Looms for weaving embroidered fabrics.	Nov. 21, 1865.
46, 400	Spittdorf, Henry, and James J. Clark. (See Clark & Spittdorf.)	Boston, Mass.	Collars, paper, machine for stretching.	Feb. 14, 1865.
49, 567	Spofford, Charles, and W. S. Bell, Jr.	New Bedford, Mass.	Composition for coating ship bottoms.	Aug. 22, 1865.
50, 180	Spooquer, Charles M.	Schenectady, N. Y.	Soap composition.	Sept. 26, 1865.
	Sprague, E.			
	Sprague, J. A., and Charles Tinker. (See Tinker & Sprague.)			
	Release.			
46, 719	Sprague, Leonard A.	New York, N. Y.	Buckle lever.	Mar. 7, 1865.
47, 047	Sprague, Orlando.	Fulton, Ill.	Beehives.	Mar. 28, 1865.
47, 220	Sprague, William H.	Boston, Mass.	Signal frames.	Apr. 11, 1865.
49, 799	Spratt, William S.	West Manchester, Pa.	Ploughs.	Sept. 5, 1865.
	Spring Perch Company. (See Gray & Curtis, assignor.)			
50, 401	Springer, Ezra.	Davis, Ill.	Wadding and wringing machines.	Oct. 10, 1865.
45, 942	Sprunt, Aried B.	Hughesville, Pa.	Rakes, horse.	Jan. 17, 1865.
48, 109	Sprunt, Aried B.	Hughesville, Pa.	Rakes, horse.	June 6, 1865.
49, 800	Sprunt, Aried B.	Hughesville, Pa.	Rake, horse, teeth.	Sept. 5, 1865.
1, 978	Sprunt, Aried B.	Hughesville, Pa.	Rakes, horse. (Release.)	May 30, 1865.
2, 032	Sprunt, Aried B.	Hughesville, Pa.	Rakes, horse. (Release.)	July 18, 1865.
46, 720	Squire, John C.	Windsor Locks, Conn.	Jars, fruit.	Mar. 7, 1865.
50, 181	Squire, John J.	New London, Conn.	Jars, fruit.	Sept. 26, 1865.
46, 827	Squires, Edwin G.	Lima, N. Y.	Writing, instrument for training the muscles in.	Mar. 14, 1865.
46, 828	Stabler, Edward.	Sandy Springs, Md.	Fire-arms, magazine.	Mar. 14, 1865.
1, 965	Stabler, Edward.	Sandy Springs, Md.	Fire-arms, magazine.	Mar. 14, 1865.
50, 965	Stabler, Francis.	Baltimore, Md.	Preserving animal and vegetable substances, process for.	Nov. 14, 1865.
50, 182	Stachelin, Martin, and Henry Young. (See Young & Stachelin.)	Brooklyn, N. Y.	Meridian finders.	Sept. 26, 1865.
Stachpole, William		Cincinnati, Ohio	Hydrants.	June 6, 1865.
1, 965	Stacy, Charles L.			
	Stacy, Eli T. (See Richardson, Nathan, assignor.)			

## List of patentees of inventions, designs, and reissues, 1865—Continued.

No	Patente.	Residence.	Invention or discovery.	Date.
46, 506	Staehlen, Wm., and R. Boeklen. (See Boeklen & Staehlen.)	Old Saybrook, Conn.	Ordnance, construction of.	Feb. 21, 1865.
46, 731	Stadford, Nelson.	Brooklyn, N. Y.	Locks.	Mar. 7, 1865.
50, 193	Sieger, Henry F.	Milwaukee, Wis.	Oil-ejecting caps.	Sept. 26, 1865.
49, 313	Standro, Samuel.	Northville, Mich.	Fence.	Aug. 8, 1865.
50, 852	Standish, L. F., et al. (See Tyler, Chandler & Standish.)	Newark, N. J.	Buckles.	Nov. 7, 1865.
49, 933	Stanley, Daniel, and George Johnson.	Cincinnati, Ohio.	Boring machines.	Sept. 12, 1865.
47, 986	Stanley, Henry.	Troy, N. Y.	Diggers, rotary.	May 30, 1865.
47, 665	Stanley, Rile and Level Co. (See Fraust, Justus A., assignor.)	Brooklyn, N. Y.	Brick and pottery-ware, kiln for burning.	May 9, 1865.
	Stanley, Thomas B., and James W. Weston. (See Weston & Stanley.)			
50, 505	Stannard, Albert A.	Ithaca, N. Y.	Collars, horse.	Oct. 17, 1865.
49, 003	Stansbury, A. D.	Cross Creek Township, W. Va.	Racks, sheep.	July 25, 1865.
50, 184	Stansbury, Charles F. (See Young, Wm., assignor.)	Brooklyn, N. Y.	Cement.	Sept. 26, 1865.
	Stanton, H. B., et al. (See Arnold, Alfred, assignor.)			
50, 966	Stanton, Samuel, et al. (See Turrell, Stanton & Ward.)			
1, 966	Staples, Robert H.	Dunmore, Pa.	Engines, steam, valve gear for.	Nov. 14, 1865.
49, 453	Starbuck, James C.	Lowell, Mass.	Chair, spring back.	June 6, 1865.
46, 952	Starbuck, N.	Cambridge, Mass.	Tree protector.	Aug. 15, 1865.

50, 643	Thacker, John	New Lexington, Ohio.	Well, artesian, boring apparatus for	Oct. 24, 1865.
50, 750	Thackray, George	Mayville, N. Y.	Engines, steam, slide-valves for	Oct. 31, 1865.
50, 050	Thayer, David N.	Worcester, Mass.	Pumps, steam, automatic	Sept. 19, 1865.
47, 051	Thayer, Eli	Worcester, Mass.	Grate bars for boilers	Mar. 28, 1865.
47, 053	Thayer, Eli	Worcester, Mass.	Grates, tubular	Mar. 28, 1865.
47, 054	Thayer, Eli	Worcester, Mass.	Steam generators	Mar. 28, 1865.
47, 079	Thayer, Eli	Worcester, Mass.	Boiler, steam, sediment-extractor for	Mar. 28, 1865.
48, 171	Thayer, Eli	Worcester, Mass.	Glass by exposure to heat, method of preventing the breaking of	Apr. 11, 1865.
48, 172	Thayer, B. and J. M. McClelland	Worcester, Mass.	Steam generators	Aug. 1, 1865.
50, 403	Thayer, Francis B.	Pittsburg, Ind.	Cultivators	Aug. 1, 1865.
47, 233	Thieling, John H. (See Cajar, Emil, assignor.)	Troy, N. Y.	Bolts, flour	Oct. 10, 1865.
50, 751	Thomas, Alfred V.	Frederick, Md.	Lock, night, travellers'	Apr. 11, 1865.
50, 625	Thomas, Charles H., assignor to self and Hernon Thomas	Milton, N. Y.	Presses, elder	Oct. 31, 1865.
48, 111	Thomas, James C.	New York, N. Y.	Carriage axles	Oct. 24, 1865.
47, 468	Thomas, I. H., and P. P. Mast	Red Point, Md.	Planter, corn	June 6, 1865.
46, 739	Thomas, I. H., and P. P. Mast	Springfield, Ohio	Seeding machines, attaching drill-teeth to	Apr. 25, 1865.
47, 055	Thomas, I. H., and P. P. Mast	Springfield, Ohio	Cultivators	Mar. 7, 1865.
47, 138	Thomas, I. H., and P. P. Mast	Springfield, Ohio	Fertilizers, machine for distributing	Mar. 28, 1865.
48, 119	Thomas, I. H., and P. P. Mast	Springfield, Ohio	Drills, grain	Apr. 4, 1865.
50, 545	Thomas, I. H., and P. P. Mast	Springfield, Ohio	Drills, grain, drag-bars for	June 6, 1865.
51, 101	Thomas, I. H., and P. P. Mast	Springfield, Ohio	Mill, elder	Oct. 17, 1865.
48, 494	Thomas, I. H., and P. P. Mast, and Thomas Harding	Springfield, Ohio	Cultivators	Nov. 21, 1865.
49, 173	Thomas, Levi H.	Waterbury, Vt.	Seed brake	Dec. 19, 1865.
49, 174	Thomas, Levi H.	Waterbury, Vt.	Traps, steel	Aug. 1, 1865.
50, 644	Thomas, Lloyd	New Philadelphia, Ill.	Strip, boiler and evaporator	Aug. 1, 1865.
46, 156	Thomas, N. Spencer	Painted Post, N. Y.	Extractions, fluid, concentrated, process for making	Jan. 31, 1865.
49, 319	Thomas, N. Spencer	Buffalo, N. Y.	Mill, bark	Jan. 31, 1865.
1, 965	Thomas, Robert	Columbiana, Ala.	Ship's knee	Aug. 8, 1865.
49, 175	Thomas, Robert, and Giles Edwards	Ottawa, Ill.	Iron, wrought, manufacture of	May 23, 1865.
47, 138	Thomas, William	Binghamton, N. Y.	Canal lock gates, device for raising	Apr. 1, 1865.
49, 455	Thomas, William R.	Catsenqua, Pa.	Racks, bay for wagons	Aug. 15, 1865.
46, 733	Thomas, Albert, (See Johnson, Warren, assignor.)	Ablington, Mass.	Piston packing	Mar. 7, 1865.
48, 113	Thompson, Edwin, and	Brooklyn, N. Y.	Shoes, machine-sewed, manufacture of	June 6, 1865.
2, 109	Thompson, Henry G., assignor to the Hartford Carpet Company	New York, N. Y.	Carpet pattern	July 4, 1865.
2, 110	Thompson, Henry G., assignor to the Hartford Carpet Company	New York, N. Y.	Carpet pattern	July 4, 1865.
2, 111	Thompson, Henry G., assignor to the Hartford Carpet Company	New York, N. Y.	Carpet pattern	July 4, 1865.

## List of patentees of inventions, designs, and reissues, 1865—Continued.

No.	Patentee.	Residence.	Invention or discovery.	Date.
2,112	Thompson, Henry G., assignor to the Hartford Carpet Company.	New York, N. Y.	Carpet pattern.....	July 4, 1865.
2,113	Thompson, Henry G., assignor to the Hartford Carpet Company.	New York, N. Y.	Carpet pattern.....	July 4, 1865.
2,114	Thompson, Henry G., assignor to the Hartford Carpet Company.	New York, N. Y.	Carpet pattern.....	July 4, 1865.
2,115	Thompson, Henry G., assignor to the Hartford Carpet Company.	New York, N. Y.	Carpet pattern.....	July 4, 1865.
2,116	Thompson, Henry G., assignor to the Hartford Carpet Company.	New York, N. Y.	Carpet pattern.....	July 4, 1865.
2,117	Thompson, Henry G., assignor to the Hartford Carpet Company.	New York, N. Y.	Carpet pattern.....	July 4, 1865.
2,118	Thompson, Henry G., assignor to the Hartford Carpet Company.	New York, N. Y.	Carpet pattern.....	July 4, 1865.
2,119	Thompson, Henry G., assignor to the Hartford Carpet Company.	New York, N. Y.	Carpet pattern.....	July 4, 1865.
2,120	Thompson, Henry G., assignor to the Hartford Carpet Company.	New York, N. Y.	Carpet pattern.....	July 4, 1865.
2,121	Thompson, Henry G., assignor to the Hartford Carpet Company.	New York, N. Y.	Carpet pattern.....	July 4, 1865.
2,122	Thompson, Henry G., assignor to the Hartford Carpet Company.	New York, N. Y.	Carpet pattern.....	July 4, 1865.
2,123	Thompson, Henry G., assignor to the Hartford Carpet Company.	New York, N. Y.	Carpet pattern.....	July 4, 1865.
2,124	Thompson, Henry G., assignor to the Hartford Carpet Company.	New York, N. Y.	Carpet pattern.....	July 4, 1865.
2,125	Thompson, Henry G., assignor to the Hartford Carpet Company.	New York, N. Y.	Carpet pattern.....	July 4, 1865.
2,126	Thompson, Henry G., assignor to the Hartford Carpet Company.	New York, N. Y.	Carpet pattern.....	July 4, 1865.
2,127	Thompson, Henry G., assignor to the Hartford Carpet Company.	New York, N. Y.	Carpet pattern.....	July 4, 1865.
2,128	Thompson, Henry G., assignor to the Hartford Carpet Company.	New York, N. Y.	Carpet pattern.....	July 4, 1865.
2,129	Thompson, Henry G., assignor to the Hartford Carpet Company.	New York, N. Y.	Carpet pattern.....	July 4, 1865.
2,130	Thompson, Henry G., assignor to the Hartford Carpet Company.	New York, N. Y.	Carpet pattern.....	July 4, 1865.
2,131	Thompson, Henry G., assignor to the Hartford Carpet Company.	New York, N. Y.	Carpet pattern.....	July 4, 1865.
2,132	Thompson, Henry G., assignor to the Hartford Carpet Company.	New York, N. Y.	Carpet pattern.....	July 4, 1865.
2,133	Thompson, Henry G., assignor to the Hartford Carpet Company.	New York, N. Y.	Carpet pattern.....	July 4, 1865.
47,469	Thompson, Hopkins.....	New York, N. Y.	Chair reclining.....	July 4, 1865.
46,404	Thompson, James.....	New York, N. Y.	Cigar machine.....	Apr. 23, 1865.
50,645	Thompson, James.....	Versay, Ind.	Churns.....	Feb. 14, 1865.
51,981	Thompson, James.....	England.....	Gun barrels, &c., from Bessemer steel, process of making.....	Oct. 24, 1865.
48,326	Thompson, James H.....	Hoboken, N. J.	Grain bullet.....	Nov. 28, 1865.
46,734	Thompson, James G.....	Carbondale, Pa.	Barrel, oil, and for other purposes, composition for coating.....	June 20, 1865.
46,761	Thompson, J. M., and S. D. Tripp, assignors to Seth D. Tripp.....	Somerset, Mass.	Barrel, oil, and for other purposes, composition for coating.....	Mar. 7, 1865.
49,320	Thompson, John S., and Andrew P. Jackson. (See Jackson & Thompson, Alexander, and Andrew P. Jackson.).....	Yonkers, N. Y.	Heel polishing machine.....	Mar. 7, 1865.
51,270	Thompson, M. L., assignor to self and E. L. Childs.....	Brooklyn, N. Y.	Stave machines.....	Aug. 8, 1865.
47,779	Thompson, Nathaniel S.....	Brooklyn, N. Y.	Clothes bed retainers, children's. (Antedated Nov. 20, 1865.).....	Nov. 28, 1865.
50,856	Thompson, Nathaniel S.....	England.....	Jars, bottles, &c., stopper for. (Patented in England Jan. 4, 1865.).....	May 16, 1865.
46,599	Thompson, Nathaniel S., and A. S. McIntire. (See McIntire & Thompson, William A.).....	Stoneman, Mass.	Shoe-edge burnishing machine.....	Nov. 7, 1865.
46,599	Thompson, Nathaniel S., and A. S. McIntire. (See McIntire & Thompson, William A.).....	Brooklyn, N. Y.	Stoves, gas, burner for.....	Oct. 17, 1865.
46,832	Thompson, Nathaniel S., and A. S. McIntire. (See McIntire & Thompson, William A.).....	Monterey, Mass.	Chop, machine for cutting the curd of.....	Mar. 7, 1865.
47,990	Thompson, Nathaniel S., and A. S. McIntire. (See McIntire & Thompson, William A.).....	Clinton Junction, Wis.	Jack, lifting.....	Feb. 28, 1865.
47,140	Thompson, Nathaniel S., and A. S. McIntire. (See McIntire & Thompson, William A.).....	Providence, R. I.	Engine, steam, valves for.....	Mar. 28, 1865.
47,140	Thompson, Nathaniel S., and A. S. McIntire. (See McIntire & Thompson, William A.).....	New York, N. Y.	Knifedrawing machine.....	Mar. 14, 1865.
47,140	Thompson, Nathaniel S., and A. S. McIntire. (See McIntire & Thompson, William A.).....	Pike county, Mo.	Medical compound.....	May 30, 1865.

47, 480	Thurston, Edwin, and James R. Ledyard	(Covington, Ky.)	Car trucks	May 23, 1865.
51, 631	Thurston, E. M., and J. W. Penny. (See Penny & Thurston.) Thurston, Samuel D.	Sumerville, Ohio.	Broom head	Dec. 19, 1865.
	<i>Design.</i>			
51, 943	Tibbels, William.	South Coventry, Conn.	Fire-arms, breech-loading	Nov. 28, 1865.
45, 114	Tibbels, Jonathan S., and W. M. Merril	J-fersonville, Ind.	Vehicles, wheel, axle for	June 6, 1865.
47, 963	Tibbels, Milburn.	Lancaster, Ind.	Sugar pump, apparatus for shifting	May 7, 1865.
48, 741	Tibbels, Jonathan II.	Omaha City, Neb. Ter	Piano-forte actions	July 1, 1865.
46, 405	Tice, Isaac P.	New York, N. Y.	Twine, paper, mode of manufacturing.	Feb. 14, 1865.
	Tice, Isaac P. (See Smith, Austin S., assignor.) Release.			
	Tiedemann, H. C., and Willy J. Stratton. (See Stratton & Tiedemann.)			
49, 011	Tiffany, George S.	Palmyra, Mich.	Measures, board	July 25, 1865.
49, 012	Tilden, Henry H.	New Lebanon, N. Y.	Strap from corn, manufacture of	July 25, 1865.
49, 013	Tilden, Henry H.	New Lebanon, N. Y.	Filtering sirupe and other liquids, apparatus for	July 25, 1865.
47, 068	Tilden, Howard	New York, N. Y.	Sifter, flour	Mar. 28, 1865.
47, 758	Tilden, Howard	New York, N. Y.	Sifter, flour	May 16, 1865.
48, 523	Tilden, Howard	Boston, Mass.	Sifter, flour	June 13, 1865.
48, 176	Tilden, Howard	Boston, Mass.	Egg beater	Aug. 1, 1865.
2, 106	Tilden, Howard	Boston, Mass.	Sifter, flour	Nov. 14, 1865.
	Tilden, Howard. (See Johnson, John, assignor.)			
49, 200	Tilton, Howard. (See Meservey, H. L., assignor.)	New Haven, Conn.	Sifter, flour	Aug. 1, 1865.
49, 664	Tilton, George W., assignor to Asa Wilnot.	Bristol Station, Ill.	Strup, & c., apparatus for cooling	Aug. 29, 1865.
50, 968	Tilton, Frederick W.	Salem, Mass.	Clothes-dryer. (Antedated November 1, 1865.)	Nov. 14, 1865.
	Tilton, J. C. (See Andrews, Joseph K., assignor.)			
47, 584	Timby, Theodore R.	Saratoga Springs, N. Y.	Timepieces, globe.	May 2, 1865.
47, 585	Timby, Theodore R.	Saratoga Springs, N. Y.	Clocks, globe.	May 2, 1865.
1, 964	Tinker, Charles, and J. H. Sprague, assignors to Edwin Jones.	Cleveland, Ohio	Harvesters.	May 23, 1865.
51, 864	Tinker, John B.	Buffalo, N. Y.	Mowing machines.	Dec. 5, 1865.
50, 586	Tittle, Daniel J.	Altany, N. Y.	Fill machines	Oct. 3, 1865.
49, 321	Titus, Ardison R.	Warren, Pa.	Stand, milk	Aug. 8, 1865.
	Tobacco Pipe Company. (See Bowen, Andrew J., assignor.) Release.			
46, 955	Todd, A. W.	Chicago, Ill.	Sewing-machine bobbins, machine for winding	Mar. 21, 1865.
46, 853	Todd, A. W.	Chicago, Ill.	Pumps, steam	July 18, 1865.
47, 670	Todd, Joseph S.	Macon City, Mo.	Stove, coal, air-light	May 9, 1865.
50, 651	Todd, William W., and John Vandercar	Brooklyn, N. Y.	Car brakes	Sept. 19, 1865.
	Toft, James. (See Seitz, Louis, assignor.)			
47, 586	Toggenburger, Frederic.	Chicago, Ill.	Shells, explosive, by clockwork, timing	May 2, 1855.
46, 406	Toll, Charles, et al.	Circleville, Ohio.	Map	Feb. 14, 1865.
	Tomb, Ann M. (See Custer, George, assignor.)			
46, 407	Tonkins, Joseph P.	Lyons, N. Y.	Marble, machine for polishing	Feb. 14, 1865.
45, 771	Tonkinson, Abraham, assignor to self and Charles C. Clements.	New York, N. Y.	Barrel heads, method of securing. (Antedated Nov. 24, 1861.)	Jan. 3, 1865.
50, 780	Tonkinson, Abraham	Cincinnati, Ohio.	Blacking	Oct. 31, 1865.
48, 603	Tompkins, C. R.	Newburg, Wis.	Separator, grain	July 4, 1865.
46, 506	Tompkins, Clark.	Rochester, N. Y.	Barrel heads, machine for cutting	Feb. 21, 1865.
	Tompkins, John W. Stephen S., and James. (See Price, James, assignor.)			
45, 880	Tompkins, Samuel E.	Newark, N. J.	Saddletrees, harness.	Jan. 10, 1865.

## List of patentees of inventions, designs, and reissues, 1865—Continued.

No.	Patentee.	Residence.	Invention or discovery.	Date.
47, 671	Toof, E. J.	Fort Madison, Iowa.	Elevators, hay.	May 9, 1865.
51, 632	Toof, Edwin J.	Fort Madison, Iowa.	Draught equalizer, three-horse.	Dec. 19, 1865.
48, 742	Tooker, A. W.	Harvard, Ill.	Hay elevator and staker.	July 11, 1865.
	Tooney, M., et al. (See Deltour, William, assignor.)			
	Toplam, James S., and Robert McMurray. (See McMurray & Toplam.)

	Wardler & Child. (See Cochrane, William F., assignor.)			
	Wardler, B. F., <i>et al.</i> (See Cochrane, William F., assignor.)			
50, 198	Wardler, B. H., <i>et al.</i> (See Cochrane, William F., assignor.)	Lake Village, N. H.	Needles, knitting machine for making	Sept. 10, 1865.
9, 087	Wardwell, George J., assignor to the Steam Stonemounter Company.	Rutland, Vt.	Stonemounting machine	Oct. 10, 1865.
51, 068	Wardwell, George J., assignor to the Steam Stonemounter Company.	Rutland, Vt.	Stonemounting machine	Oct. 10, 1865.
51, 271	Wardwell, George J., assignor to the Steam Stonemounter Company.	Rutland, Vt.	Stonemounting machinery	Nov. 28, 1865.
51, 272	Wardwell, George J., assignor to the Steam Stonemounter Company.	Rutland, Vt.	Stone, machinery for cutting	Nov. 28, 1865.
51, 273	Wardwell, George J., assignor to the Steam Stonemounter Company.	Rutland, Vt.	Stone, machinery for cutting	Nov. 28, 1865.
47, 234	Wardwell, George J., assignor to the Steam Stonemounter Company.	Rutland, Vt.	Stone, machinery for cutting	Nov. 28, 1865.
49, 059	Ware, Hiram B., <i>et al.</i>	South Yeh, N. Y.	Stone chains for transportation	Apr. 11, 1865.
50, 308	Ware, Thomas, and Carl Schultz. (See Schultz & Warker.)	North Hoboken, N. J.	Helical, mode of manufacturing Drawers	Sept. 12, 1865. Oct. 3, 1865.
49, 940	Warker, Thomas, and Carl Schultz. (See Schultz & Warker.)	Roadway, N. J.	Alarm, burglar, and lock	Sept. 12, 1865.

50, 509	Warner, Alanson	Ontario, N. Y.	Harvesters, gearing for	Nov. 14, 1865.
46, 001	Warner, A. E. and J. V.	Norwalk, Ohio	Mowing machines	May 30, 1865.
4, 045	Warner, A. E. and J. V.	Norwalk, Ohio	Sawing machines	Aug. 1, 1865.
50, 585	Warner, O. W. and H. N. Tracy	Elmwood, N. Y.	Rakes, horse	Oct. 17, 1865.
46, 606	Warner, Eli G.	Union Township, Ohio	Rakes, grain	July 4, 1865.
46, 130	Warner, H. W.	Greenfield, Mass.	Valve, throttle, gear	June 6, 1865.
48, 131	Warner, H. W.	Greenfield, Mass.	Buckle, lever	June 6, 1865.
50, 319	Warner, H. W., assignor to self, F. J. Pratt, and E. W. Russell.	Greenfield, Mass.	Railroad chair	Oct. 3, 1865.
50, 370	Warner, Joel	Ogdenburg, N. Y.	Shuttles, latting	Nov. 14, 1865.
47, 073	Warner, L. W. (See Buckett, Joseph, assignor.) Warner, S. R., assignor to self and A. R. Treadway Warner, S. R. and A. R. Treadway. (See Treadway & Warner.) Warner, Wm. S. and George S. Parry. (See Parry & Warner.) Warren, Wm. S. and Geo. S. Parry. (See Parry & Warner.) Warren, A. E. and Warren, G. W.	New Haven, Conn.	Steam pipes, valves for	Mar. 28, 1865.
47, 143	Warren, Charles H. and A. C. Baldwin	Cleveland, Ohio	Addressing machine	Apr. 4, 1865.
51, 634	Warren, Cyrus M.	Hilldale, Mich.	Washboard	Dec. 19, 1865.
47, 255	Warren, David	Tiffin, Ohio	Petroleum, &c., apparatus for distilling	Apr. 11, 1865.
49, 574	Warren, George W.	Boston, Mass.	Railroads, switches for	Aug. 22, 1865.
45, 775	Warren, E. E., & et. (See Hurd, Daniel, assignor.)	Gettysburg, Pa.	Seeding machine, broadcast	Jan. 3, 1865.
46, 410	Warren, J. T.	Ossian, N. Y.	Cnapsack, slings	Feb. 14, 1865.
49, 584	Warren, J. T., assignor to self and Robert A. Cheesebrough	Stafford, N. Y.	Engines, rotary	Aug. 22, 1865.
50, 066	Warren, J. T., assignor to self and Robert A. Cheesebrough	Stafford, N. Y.	Engines, rotary	Oct. 24, 1865.
2, 084	Warren, J. T., assignor to Robert A. Cheesebrough	New York, N. Y.	Carriage boxes	Oct. 17, 1865.
50, 406	Warren, John M.	Boston, Mass.	Glass, polish for. (Antedated September 28, 1865)	Oct. 10, 1865.
45, 944	Warren, Otis. (See Allen, William H., assignor.) Release.	New York, N. Y.	Amalgamating vessel, apparatus for	Jan. 17, 1865.
51, 635	Warren, Owen G.	New York, N. Y.	Railroad box rail. (Antedated December 14, 1865)	Dec. 19, 1865.
51, 247	Warth, Albin	Stapleton, N. Y.	Sewing machines, guides for	Nov. 28, 1865.
45, 894	Warwick Tool Company. (See Chishman, A. F., assignor.) Washington, A. G. (See Hall, Thomas C., assignor.) Washington, F. O., assignor to self and John C. Scott.	Millville, Mass.	Calipers	Jan. 10, 1865.
46, 838	Washington, George I.	Worcester, Mass.	Lever, differential	Mar. 14, 1865.
46, 867	Washington, George I.	Worcester, Mass.	Thermal-motor	July 4, 1865.
46, 868	Washington, George I.	Worcester, Mass.	Wire straightening machines	July 4, 1865.
48, 969	Washington, George I.	Worcester, Mass.	Engines, steam	Sept. 5, 1865.
49, 810	Washington, George I.	Worcester, Mass.	Steam generators	Sept. 5, 1865.
49, 941	Washington, George I.	Worcester, Mass.	Feed-water apparatus	Sept. 12, 1865.
47, 475	Washington, J. and P. I. Moen. (See Chesney & Brown, assignors.) Release. Washington, J. and P. L. Moen. (See Frost, W. E., assignor.) Washington, J. and P. L. Moen. (See Frost, W. E., assignor.) Washington, P. J. and P. L. Moen. (See Frost, W. E., assignor.) Wassell, Edwin	Pittsburg, Pa.	Rolling mills	Apr. 25, 1865.
46, 486	Wassell, Edwin, assignor to self and Archibald McFarland	Pittsburg, Pa.	Rolling apparatus	June 27, 1865.
50, 180	Waterbury Buckle Company. (See Smith, Dwight L., assignor.) Waterhouse, H. K.	Factory Point, Vt.	Thill coupling	Sept. 26, 1865.
51, 874	Waterman, Henry	Brooklyn, N. Y.	Wire, tempering	Feb. 14, 1865.
50, 056	Waters, Gardner	Cincinnati, Ohio	Beer coolers	Sept. 26, 1865.
45, 886	Waters, Hervey	Northbridge, Mass.	Metals, machine for rolling	Jan. 10, 1865.

## List of patentees of inventions, designs, and reissues, 1865—Continued.

No.	Patentee.	Residence.	Invention or discovery.	Date.
47, 389	Waters, Harvey	Northbridge, Mass	Seythes, blanks for	May 2, 1865.
47, 590	Waters, Harvey	Northbridge, Mass	Metal machine for rolling	May 2, 1865.
48, 466	Waters, H. H. (See Wright, George F., assignor.)	Northbridge, Mass	Rollers, guide for	June 27, 1865.
46, 434	Watkins, F.	England	Bolts, machine for leading	Feb. 14, 1865.
50, 972	Watkins, George, and John Lacey (See Lacey & Watkins.)	Springfield, Mass	Railroad switch	Nov. 14, 1865.
45, 776	Watson, Albert P.	New York, N. Y.	Spur carrier, boot drawer, and pantalon guard, combined	Jan. 3, 1865.
47, 476	Watson, G. V. et al. (See Milson, Spindelow & Watson.)	Cliff Mine, Mich	Ores, apparatus for separating	Apr. 25, 1865.
47, 884	Watson, James	Pittsburg, Pa.	Ores, apparatus for washing	May 21, 1865.
50, 190	Watson, James	Philadelphia, Pa.	Tools, boring, coupling for shafts of	Sept. 26, 1865.
51, 369	Watson, W. M.	Tonika, Ill	Alcohol, method of treating grain for the manufacture of	Dec. 5, 1865.
50, 407	Watt, James	Buffalo, N. Y.	Hammers, steam, valve gear of	Oct. 10, 1865.
45, 799	Watters, W. E., deceased, by Mary P. Watters, administratrix, assignor to Aquila H. Pickering.	East Bend, Ky	Pumps	Jan. 3, 1865.
50, 971	Way, Isaac I.	Memphis, Tenn.	Press, cotton	Nov. 14, 1865.
50, 864	Way, Thomas B.	Bennington, Vt.	Bottle stopper	Nov. 7, 1865.
1, 855	Wayne, Joseph W. and Joseph R. Miller	Cincinnati, Ohio	Table, folding	Jan. 24, 1865.
46, 163	Weaver, Jefford L.	Orange, Mass.	Boonet binding, making	Jan. 31, 1865.
45, 887	Weaver, Theos.	Harrisburg, Pa.	Chair, adjustable	Jan. 10, 1865.
47, 175	Weaver, Theos.	Harrisburg, Pa.	Writing tablet	Apr. 4, 1865.
49, 323	Weaver, W. I. and J. M. Sundlifer	Somerset, Ky	Clock escapements	Apr. 4, 1865.
49, 354	Webb, Albion, assignor to self and D. M. Dunham	Bangor, Me	Cultivator, horse hoe	Aug. 8, 1865.
47, 077	Webb, Francis William	England	Fugots, construction of. (Patented in England February 9, 1864.)	Aug. 8, 1865.
2, 131	Webb, Henry J. and Stephen D. Cook. (See Cook & Webb.)	New Britain, Conn	Latches, knob	Mar. 28, 1865.
51, 370	Webber, Charles T. and W. M. Davis. (See Davis & Webber.)	Chicago, Ill.	Barrels, apparatus for filling	Dec. 19, 1865.
51, 371	Webber, Henry A. and Charles Reipenlyder	Chicago, Ill.	Barrels, apparatus for filling	Dec. 5, 1865.
51, 372	Webber, Henry A. and Charles Reipenlyder	Chicago, Ill.	Barrel fillers, self-closing	Dec. 5, 1865.
49, 684	Webber, Nathaniel B., assignor to self and Theodore L. Jackson.	Paoli, Ind	Washing machine and wringer	Aug. 29, 1865.
46, 283	Weber, A. and H. Maurer. (See Oest, Theodore L., assignor.)	Woonsocket, R. I.	Soda-water apparatus	Feb. 7, 1865.
46, 284	Weber, Frederick A. and William H. Greene	Woonsocket, R. I.	Soda-water apparatus, draught-tube for	Feb. 7, 1865.
46, 195	Weber, Jacob, assignor to self, William Wharton, Jr., and Ira B. Snyder.	New York, N. Y.	Knapack	Jan. 31, 1865.
46, 164	Weber, Henry	Berctown, Wis	Plough, gung	Jan. 31, 1865.
49, 667	Weber, Horace H.	Claremont, N. H.	Cultivators	Aug. 29, 1865.
46, 198	Weber, James	England	Zinc, manufacture of. (Patented in England May 18, 1864.)	Jan. 31, 1865.
51, 104	Weber, Joel, and James O. Morgan	Brooklyn, N. Y.	Ore crusher	Nov. 21, 1865.
2, 065	Weber, John Taylor, assignor to Edward Harvey	New York, N. Y.	Floor oil-cloth	Nov. 9, 1865.
49, 046	Weber, Thomas B., assignor to self and Thomas Gannon	New York, N. Y.	Presses	July 25, 1865.
49, 047	Weber, Thomas B., assignor to self and Thomas Gannon	New York, N. Y.	Presses, screw	July 25, 1865.
2, 111	Weber, Thomas B., assignor to self and Thomas Gannon	New York, N. Y.	Presses, screw	Nov. 21, 1865.

47, 477	Weber, William	Midletown, Ohio	Rubber, India, packing for	Apr. 25, 1865.
46, 665	Weed, Alfred, assignor to self and Lewis J. Bird	Madison, Wis.	Shoe, machine for cutting	Mar. 14, 1865.
50, 057	Weed, Fitch	Middlebury, Mass.	Shoe, machine for cutting	Sept. 1, 1865.
49, 811	Weed, Samuel S.	Stoneham, Mass.	Hides, apparatus for removing hair and lime from	Sept. 1, 1865.
49, 859	Weed, Samuel S., assignor to self, E. M. Stevens, and J. L. Hall	Stoneham, Mass.	Hides, apparatus for removing hair and lime from	Sept. 1, 1865.
46, 512	Weeks, John I.	Philadelphia, Pa.	Window sash, retainer for	Sept. 1, 1865.
50, 017	Whelan, John J., assignor through mesne assignment to Andrew Whelan	Springfield, Ohio	Harvester of grain and grass	June 27, 1865.
49, 459	Wahr, John	Roanoke, Ind.	Leather, harness, machine for cutting	Aug. 15, 1865.
49, 182	Well, F. et al. (See Liebermann, Henry, assignor.)	Dorham, Mass.	Looms, picker-staff, connection in	Aug. 15, 1865.
50, 757	Wellard, Warner	Great Britain	Rollers, fitted, machinery for making	Nov. 1, 1865.
50, 997	Well, William	Lebanon, Pa.	Truck looms, apparatus for bending and punching	Oct. 31, 1865.
50, 753	Weiner, Peter L.	Lebanon, Pa.	Punching, apparatus for	Oct. 31, 1865.
50, 754	Weiner, Peter L.	Lebanon, Pa.	Drawheads for railroad cars, apparatus for bending and punching the frames of	Oct. 31, 1865.
50, 755	Weiner, Peter L.	Lebanon, Pa.	Drawhead plates, bending and punching	Oct. 31, 1865.
50, 756	Weiner, Peter L.	Lebanon, Pa.	Hooks, bending and punching	Oct. 31, 1865.
50, 757	Weiner, Peter L.	Lebanon, Pa.	Chain-links, apparatus for bending	Oct. 31, 1865.
50, 761	Weiner, Peter L.	Lebanon, Pa.	Tubes, hot-welded, machine for finishing	Oct. 31, 1865.
46, 285	Weir, William S., assignor to Aurora Iron Company	Monmouth, Ill.	Plough, corn	Feb. 7, 1865.
45, 945	Weir, W. S., et al. (See Ochiltree & Johnson, assignors.)	Hudson City, N. J.	Oil cups	Jan. 17, 1865.
45, 777	Wedding, William	New York, N. Y.	Sewing machine	Jan. 3, 1865.
46, 513	Wedding, William	New York, N. Y.	Sewing machine, device for squaring the delivery of the thread from the shuttles and spools of	Feb. 21, 1865.
49, 294	Weltman, A.	West Union, Iowa	Horsehoes	Aug. 8, 1865.
49, 812	Weltman, Augustus	West Union, Iowa	Horsehoes	Aug. 8, 1865.
51, 636	Welch, Daniel, and William W. Armington, assignors to George E. Mitchell	Hazleton, Iowa	Tire, device for shrinking	Sept. 19, 1865.
50, 667	Welch, Daniel, and William W. Armington, assignors to George E. Mitchell	Lovell, Mass.	Saws, hand	Oct. 24, 1865.
49, 825	Welch, H. H.	Athens, Ohio	Heater, fireplace	Aug. 8, 1865.
49, 183	Welch, Thomas	Churchville, N. Y.	Harvester	Aug. 1, 1865.
49, 184	Welch, Thomas	Churchville, N. Y.	Reaping and mowing machine	Aug. 1, 1865.
49, 185	Welch, Thomas	Churchville, N. Y.	Crack-pin boxes	Aug. 1, 1865.
50, 973	Wedding, John	Cincinnati, Ohio	Washing machine	Aug. 14, 1865.
46, 165	Welham, Thomas	Washington, D. C.	Engines, steam	Nov. 14, 1865.
46, 166	Welham, Thomas	Washington, D. C.	Shading, universal	Nov. 14, 1865.
46, 167	Welham, Thomas	Washington, D. C.	Brush, hydraulic	Jan. 31, 1865.
46, 168	Welham, Thomas	Washington, D. C.	Screw machine for shaping and pressing	Jan. 31, 1865.
47, 226	Welham, Thomas	Washington, D. C.	Sugar, manufacture of	Apr. 11, 1865.
51, 502	Weller, H. and J. E. Hatcher	Fultonham, Ohio	Sugar, manufacture of	Dec. 12, 1865.
49, 813	Wellington, C. H. W. (See Smith, Moore, assignor.)	New York, N. Y.	Shirrup-fastening	Sept. 5, 1865.
48, 751	Wellman, Marshall and James Old	Pittsburg, Pa.	Stoves, coal	Sept. 5, 1865.
48, 752	Wellman, Marshall and James Old	Pittsburg, Pa.	Preplace	July 11, 1865.
46, 600	Wellman, M. J. and J. J. Greenough	Pittsburg, Pa.	Lamp shades, (Antedated February 16, 1865)	Feb. 28, 1865.
49, 018	Wells, Charles, and Henry Barth	New York, N. Y.	Paper, machine for cutting	July 25, 1865.
50, 058	Wells, Charles S.	Cincinnati, Ohio	Stamps, postage and revenue, instrument for cancelling	Sept. 19, 1865.
51, 766	Wells, Joseph	Chicago, Mass.	Sifter, flour and sauce	Sept. 19, 1865.
49, 226	Wells, Leonard	New York, N. Y.	Shells, explosive, for ordnance. (Antedated July 28, 1865)	Dec. 26, 1865.
51, 503	Wells, M. D.	Morgantown, W. Va.	Rakes, horse	Aug. 8, 1865.
				Dec. 12, 1865.

## List of patentees of inventions, designs, and reissues, 1865—Continued.

No.	Patentee.	Residence.	Invention or discovery.	Date.
51,504	Wells, Oliver D.	Westerley, R. I.	Ships, apparatus for the ventilation of.	Dec. 12, 1865.
48,069	Wells, R. G.	Plumer, Pa.	Drill.	July 4, 1865.
45,778	Wells, R. M.	Franklin Centre, Vt.	Car, railroad.	Jan. 3, 1865.
46,467	{ Wells, R. M. Wells, R. S., and Wells, S. B.	{ New York, N. Y. Middleburg, N. Y.	{} Machinery, mode of driving.	{} June 27, 1865.
51,248	Wells, William C., and Samuel R. Percy. (See Percy & Wells.)	Newark, N. J.	Drill-gauge.	Nov. 28, 1865.
49,814	Wells, J. A., and J. B. Gowdy. (See Gowdy & Welsh.)	Philadelphia, Pa.	Looms.	Sept. 5, 1865.
51,525	Wendell, George S., assignor to J. Horace Taylor.	New York, N. Y.	Scoop and flour sifter.	Dec. 12, 1865.
50,427	Wendell, Isaac F., and Stephen Untick, assignors to Isaac F. Wendell.	Philadelphia, Pa.	Car, railroad, pedestals for.	Oct. 10, 1865.
49,201	Wendren, James C., assignor to Wheeler, Mellick & Co. and E. Wacknagen.	Albany, N. Y.	Paint, composition for.	Aug. 1, 1865.
9,182	Wendt, Rudolph.	New York, N. Y.	Spoon handle.	Aug. 8, 1865.
5,132	Wendt, Rudolph.	New York, N. Y.	Spoon handle.	Sept. 12, 1865.
48,835	Wenger, Henry.	Pennsylvania, Pa.	Water wheel.	July 18, 1865.

48, 122	Wheeler, Cyrus J. (See Forbush, E. B., assignor.)	Athol, Mass.	Boots	June 6, 1865.

## List of patentees of inventions, designs, and reissues, 1865—Continued.

No.	Patentee.	Residence.	Invention or discovery.	Date.
47, 479	Wheeler, Norman W.	Brooklyn, N. Y.	Boats, ferry, railway for	Apr. 25, 1865.
47, 480	Wheeler, Norman W.	Brooklyn, N. Y.	Condensers, tubular	Apr. 25, 1865.
47, 481	Wheeler, Norman W.	Brooklyn, N. Y.	Berth, movable	Apr. 25, 1865.
47, 482	Wheeler, Norman W.	Brooklyn, N. Y.	Boats, steam, and other vessels, landing platform for	Apr. 25, 1865.
51, 739	Wheeler, Russell, and Stephen A. Bailey	Brooklyn, N. Y.	Flue cleaners	Nov. 26, 1865.
2, 138	Wheeler, Russell, and Stephen A. Bailey	Brooklyn, N. Y.	Stove, cook	Aug. 1, 1865.
48, 778	Wheeler, S. H., assignor to self, R. H. Allen, C. T. Lee, A. G. Townsend, D. Henderson, J. T. Stillwell, T. J. Martin, and J. Sullivan	Dowagiac, Mich.	Faucets, measuring	July 11, 1865.
50, 210	Wheeler, S. H., assignor to self, A. G. Townsend, J. Stillwell, R. H. Allen, E. F. Townsend, C. T. Lee, and J. Sullivan	Dowagiac, Mich.	Hay forks, horse	Sept. 26, 1865.
45, 783	Wheeler, William	Albany, N. Y.	Sieves, grain	Nov. 29, 1865.
47, 691	Wheeler, William A.	Poultney, Vt.	Stove	Jan. 3, 1865.
49, 298	Wheeler, W. F.	New York, N. Y.	Ice-stand, Canadian, operating parts of a	Mar. 28, 1865.
50, 761	Wheeler, Zenos	Louisville, Ky.	Evaporating and distilling apparatus	Aug. 6, 1865.
51, 737	Wheeler, Zenos, and Phineas M. Randall	San Francisco, Cal.	Shafts, fastening wheels, and pulleys to	Oct. 31, 1865.
48, 771	Wheeler, Jay	San Francisco, Cal.	Mill, quartz-grinding	Dec. 7, 1865.
51, 950	Wheeler, Jerome	San Francisco, Cal.	Trap, animal	Mar. 7, 1865.
47, 948	Whelock, Linko, assignor to self and O. B. Leavenworth	Worcester, Mass.	Patron, packing	Nov. 29, 1865.
49, 043	Whelpley, James D.	New Haven, Conn.	Syringes	Apr. 12, 1865.
48, 926	Whelpley, J. D., and Jacob J. Storer	Boston, Mass.	Molds from ore, apparatus for separating	Sept. 12, 1865.
48, 197	Whelpley, J. D., and Jacob J. Storer	Boston, Mass.	Mill, stamping and crushing	June 13, 1865.
50, 973	Whelpley, J. D., and Jacob J. Storer	Boston, Mass.	Quartz crushers	Aug. 1, 1865.
50, 976	Whelpley, J. D., and Jacob J. Storer	Boston, Mass.	Steel, cast, or cast iron, with wrought or cast-iron surfaces, process for uniting	Nov. 14, 1865.
50, 647	Whipple, H. J. P. and John F. Parker. (See Cinquino, Pietro, ass't.)	Boston, Mass.	File-cutting machines	Oct. 24, 1865.
1, 881	Whipple, M. D., assignor through mens assignments to the Whipple File Manufacturing Company.	Cambridge, Mass.	Files, machines for cutting	Feb. 21, 1865.
48, 738	Whitaker, Dan M.	Roxbury, Mass.	Soap frames, construction of	July 11, 1865.
47, 238	Whitall, John M.	Philadelphia, Pa.	Jars, fruit, stopper for	Apr. 11, 1865.
50, 201	Whitcomb, James O.	New York, N. Y.	Dental operating machines	Oct. 3, 1865.
47, 350	White, Albert M.	Port Chester, N. Y.	Fire-arms, breech-loading	Apr. 12, 1865.
47, 157	White, Albert M., assignor to self and Barnard Lavery	Port Chester, N. Y.	Broom	Apr. 3, 1865.
49, 399	White, Albert M.	New York, N. Y.	Gas retorts, method of removing incrustation from	Apr. 3, 1865.
46, 030	White, Benjamin C.	Richmond, Ind.	Mills, fanning	Jan. 24, 1865.
46, 987	White, B. C., et al. (See Verrege, H. W., assignor.)	New York, N. Y.	Ores, apparatus for calcining	Feb. 7, 1865.
49, 248	White, George W.	Cincinnati, Ohio	Press, for	Apr. 1, 1865.
47, 146	White, Joseph F.	Kelley, N. Y.	Punch	Apr. 4, 1865.
49, 815	White, Joseph P.	New York, N. Y.	Presses, baling	Sept. 5, 1865.
46, 411	White, Martin V. H.	Troy, N. Y.	Cartridge box	Feb. 14, 1865.
49, 944	White, Orasmus A., and J. W. Bostwick	Norwalk, Ohio	Horse-power for sawing machines	Sept. 12, 1865.

50,392	White, Orasmus A., and J. W. Bortwick	Norwalk, Ohio.	Sawing machines	Oct. 3, 1865.
48,610	White, Peregrino	Hingham, Mass.	Trunks	July 4, 1865.
50,310	White, Robert, assignor to Fennells & Clark	Kalamazoo, Mich.	Trunks	Oct. 3, 1865.
50,308	White, William	Springfield, Mass.	Trunks	Apr. 4, 1865.
50,327	White, Stephen D.	Centerville, Ill.	Valves, slide	Oct. 17, 1865.
48,595	White, Thomas H. (See Harrington, George W., assignor.)	N. Attleboro', Mass.	Buttons	Aug. 22, 1865.
48,471	Whitedell, Edwin	Buffalo, N. Y.	Printing fluid	June 27, 1865.
50,977	Whitley, Edward	Cumbridge, Mass.	Ranges	Nov. 14, 1865.
49,669	Whitley, William N., Jerome Fessler, and Oliver S. Kelley	Springfield, Ohio.	Mills for grinding fruit, grain, &c.	Apr. 24, 1865.
51,374	Whitley, William N., Jr.	Springfield, Ohio.	Harvesters, automatic rakes for	Aug. 29, 1865.
	Whitley, William N., Jr. (See Steadman, Thomas S., assignor.)	Springfield, Ohio.	Harvesters	Dec. 5, 1865.
	Release.			
50,059	Whiton, Elijah	Hingham, Mass.	Sawing volutes, machine for	Sept. 29, 1865.
48,816	Whitfield, Joseph H.	Buffalo, N. Y.	Trunks. (Antedated September 15, 1865)	Sept. 19, 1865.
51,768	Whiting, E. G.	Northfield, Minn.	Ploughs	Sept. 5, 1865.
	Whiting, J. B.	Ripon, Wis.	Seedling machines	Dec. 26, 1865.
47,147	Whitmore, J., et al. (See Choate, William, assignor.)	Boston, Mass.	Sugar in blocks, apparatus for dividing	Apr. 4, 1865.
48,330	Whitney, E. P., et al. (See Lyon, B. U., assignor.)	Brooklyn, N. Y.	Unloading or storing freight, device for	June 20, 1865.
50,060	Whitney, Henry A.	Coxsack, N. Y.	Rakes, horse	Sept. 19, 1865.
46,742	Whitney, John H.	Sandfield, Mass.	Yokes, ox	Mar. 7, 1865.
51,396	Whitney, Ruel W., and F. M. Hardison, assigners to selves and Abner C. Stockin.	South Berwick, Me.	Mowing machines	Dec. 5, 1865.
47,887	Whitson, Thomas	Woodstock, Ill.	Stove-pipe drum	May 23, 1865.
48,754	Whitteley, Newton P.	West Meriden, Conn.	Toy gun	July 11, 1865.
46,839	Whittemore, David. (See Landfear, William R., assignor.)	Chicopee Falls, Mass.	Straw cutter	Mar. 14, 1865.
50,193	Whittier, Joseph G., and Thomas M. Powell	Attica, Ind.	Curtain clasp	Sept. 26, 1865.
47,239	Whittle, Joseph	Philadelphia, Pa.	Knitting machines	Apr. 11, 1865.
	Whittle, Joseph, and Richard S. Rhodes. (See Rhodes & Whyte.)			
51,638	Wickersham, John	Baltimore, Md.	Furnace doors	Dec. 19, 1865.
46,004	Wicks, George Washington	New York, N. Y.	Wells, artesian, boring machine for	May 30, 1865.
46,472	Wicks, George W.	Brooklyn, N. Y.	Roller dies	June 27, 1865.
47,351	Wieland, Benjamin	Orangeville, Ill.	Harvesters	Apr. 18, 1865.
48,019	Wieland, Benjamin	Orangeville, Ill.	Cup, batter	July 25, 1865.
49,460	Wieland, Benjamin	Orangeville, Ill.	Seedling machines	Aug. 15, 1865.
48,331	Wigal, James P.	Neoga, Ill.	Steam-pressure gauges	June 20, 1865.
46,498	Wigton, Charles P., assignor to Case, Marsh & Co.	Indianapolis, Ind.	Sawing machines	Feb. 14, 1865.
48,879	Wigton, Charles P., assignor to Case, Marsh & Co.	Indianapolis, Ind.	Sawing machines	July 18, 1865.
47,591	Wilber, John D.	Pleasant Plains, N. Y.	Press, baling, horizontal	May 2, 1865.
47,483	Wilbur, Edward R.	New York, N. Y.	Bottle stopper	Apr. 25, 1865.
46,168	Wilcox, H. W.	Columbus, Pa.	Bucket, folding	Jan. 31, 1865.
49,020	Wilcox, J., & Co. et al. (See Rugg, Datus E., assignor.)	Pittsburg, Pa.	Distillation of hydro-carbons, apparatus for separating the products of	July 25, 1865.
49,461	Wilcox, Martin	Sacramento, Cal.	Pumps, steam	Aug. 15, 1865.
49,576	Wilcox, Richard C.	Gulfport, Conn.	Sorghum, apparatus for stripping	Aug. 22, 1865.
1,942	Wilcox, Stephen, Jr.	Westerley, R. I.	Air engines, hot	Apr. 25, 1865.
			(Release)	

## List of patentees of inventions, designs, and reissues, 1865—Continued.

No.	Patentee.	Residence.	Invention or discovery.	Date.
47,759	Wilcox, Stephen, Jr.	Westerly, R. I.	Air engines, hot	May 16, 1865
50,061	Wilcox, Stephen, Jr.	Westerly, R. I.	Air engines	Sept. 19, 1865
50,062	Wilcox, Stephen, Jr.	Westerly, R. I.	Air engines, hot	Sept. 19, 1865
51,335	Wilcox, Stephen, Jr., assignor to self and Charles Potter, Jr.	Westerly, R. I.	Steam generators	Dec. 5, 1865
46,840	Wild, J. F.	New York, N. Y.	Buttons	Mar. 14, 1865
46,514	Wilder, B. A. (See Ayres, S. K., assignor.)	North Scituate, Mass.	Labels, adhesive, apparatus for softening the gum of	Feb. 21, 1865

# DESCRIPTIONS AND CLAIMS OF PATENTS

ISSUED IN THE YEAR 1865.

ILLUSTRATED WITH ENGRAVINGS.

No. 45,685.—E. H. ASHCROFT, Lynn, Mass.—*Steam Pressure Gauge*.—January 3, 1865.—This invention consists in making the disks of steam pressure gauges by the process of spinning, instead of striking them up out of sheet brass as usual. The circular plate which is to constitute the spring is confined to a chuck, the face of which is wrought into a series of concentric elevations and depressions conformable to the undulations which it is desired to be given to the disk, and the chuck being caused to rotate, a tool is pressed against the disk, and carried backward and forward across it until it has assumed the shape of the face of the chuck. The disk is then removed from this chuck, and placed upon another with its other face exposed to the action of the tool.

*Claim.*—A corrugated disk spring, hardened or tempered, substantially as set forth.

No. 45,686.—HENRY S. BABCOCK and S. H. JENKS, Ionia, Mich.—*Plaster and Seed Sower and Roller Combined*.—January 3, 1865.—In this machine the plaster box is open the whole length, the bottom being formed of an adjustable plate. A vibrating rod with teeth is caused to agitate the plaster in the box to prevent clogging. The seeding apparatus is of ordinary construction, and used in combination with a roller to smooth the ground.

*Claim.*—The plaster box fourteen having an unobstructed opening extending the whole length, the adjustable bottom plate thirteen, and toothed reciprocating bar twelve, in combination with the seed-sowing device and land roller, the several parts being constructed and arranged, substantially as and for the purpose set forth.

No. 45,687.—IRA BARBER, jr., La Porte, Ind.—*Cultivator*.—January 3, 1865.—In this invention the forward ends of the plough beams are fastened in a forked pivot, and the rear ends are suspended by chains, enabling the operator to give a lateral motion of his foot.

*Claim.*—First, the pivots *c*, pivoted with the pronged or forked ends, and arranged as shown in relation to the beam *c* and frame *O'*, in combination with the plough beams *L*, operating as and for the purposes herein shown and set forth.

Second, suspending the rear ends of the plough beams *L* by the chains *d*, in combination with the pivoted front end of said beams, for the purpose of enabling the operator to give the shovels the lateral motion, substantially as and for the purposes herein specified.

No. 45,688.—S. S. BENT, New York, N. Y.—*Combined Register and Summer Piece*.—January 3, 1865.—This invention consists in providing an ornamental summer piece with movable plates at the back, whereby it can be used as a register in winter, and a ventilator for summer.

*Claim.*—The combined register and summer piece for grate frames, constructed substantially as specified.

No. 45,689.—S. E. BLAKE, Worcester, Mass.—*Bread and Vegetable Slicer*.—January 3, 1865.—This invention is explained by the claim and engravings.

*Claim.*—The combination of the eccentric slicer *G*, adjustable feed box, feed block *N*, and rack *O*, when constructed and operated substantially as and for the purposes described.

Also, the combination of the adjustable cam *P*, with lever *Q*, pawl *R*, rack *O*, and springs *S*, for the purpose of adjusting the length of the feed, substantially in the manner herein described.

Also, the combination of the lever *Q*, pawl *R*, rack *O*, and rod *U*, for the purpose of disengaging the pawl from the ratchet, substantially as herein described.

Also, in combination with the revolving eccentric slicer *G*, feed box and feed, the protecting shield *K*, substantially as and for the purposes described.

Also, the combination of the revolving slicer, adjustable feed box, and adjustable feed, when the several devices are constructed and arranged substantially as and for the purposes described.

No. 45,690.—T. S. BLAKE and O. E. MOSHER, New York, N. Y.—*Refrigerator*.—January 3, 1865: antedated February 12, 1864.—A rectangular box provided with double walls having any suitable non-conducting substance between, contains in its upper part an inclined rack for holding ice, beneath which is a trough for carrying off water coming from the ice. The air entering the refrigerator from the outside first passes over the trough, the water in which being colder than the air, reduces its temperature somewhat before it comes in contact with the ice in the rack. Thus the waste water is made available as a cooling medium.

*Claim*.—The arrangement of the air chamber *d*, rack *c*, and conducting plate *D'*, with the bottom *D*, water trough and plate *E*, and box *A*, all in the manner herein shown and described.

No. 45,691.—C. F. BLAKESLEE, New York, N. Y.—*Arms for Dolls*.—January 3, 1865.—The arms are made by cutting them from a single piece of leather, so that they may be folded upon themselves and glued without the necessity of stuffing the fingers or stitching the edges as heretofore.

*Claim*.—As an improved article of manufacture an arm for dolls constructed by stamping or cutting out of leather of suitable thickness, with the fingers and adjacent part of the hand completely cemented together so as to have the necessary form and rigidity without stuffing, all as herein described.

No. 45,692.—H. F. BOND, Waltham, Mass.—*Device for Trimming Lamp Wicks*.—January 3, 1865.—This device consists in the combination of two lever handles connected together by a rivet, to one of which is attached a frame carrying a cutter knife operating against a head plate and returned by two spiral springs, and the other having a cross bar, which by compression of the handles operates the said frame and knife.

*Claim*.—The lamp-trimming device, constructed and operated as herein set forth.

No. 45,693.—A. H. BRAINARD, Dorchester, Mass.—*Vice*.—January 3, 1865.—This invention relates to the bed-plate, to which is attached the stationary jaw, and it consists in forming grooves both upon the sides and in the bottom, that in the latter being T-shaped and forming a hold or support for the head of the bolt, which secures the vice in position and on which it traverses, the ones on the sides forming guides and supports for the tongues of the movable jaw.

*Claim*.—Constructing the bed-plate of the stationary jaw with grooves both upon the outside and inside, the outer grooves receiving the tongues of the movable jaw, which is thus guided and supported, the inner groove receiving and affording a firm hold for a bolt, which secures the vice in position and also allows it to revolve upon a changeable centre or to slide to and fro, substantially as described.

Also, the nut *g*, substantially as described.

No. 45,694.—JOHN BROUGHTON, New York, N. Y.—*Lubricator*.—January 3, 1865.—The object of this invention is to so combine and arrange parts that an independent detachable reservoir of glass or other transparent material may be used without danger of fracture from expansion or contraction, and thus to combine the advantages of a transparent lubricator or cup, with a graduating feed. Its novelty consists in the combination and arrangement of a cap and spindle with a detachable reservoir, so that the shank and spindle, with the cap, may be firmly held together independently of the reservoir, and allow it to expand and contract independently of the connection between the shank and cap.

*Claim*.—First, the arrangement of the shank and spindle *Bj*, and cap *C*, in combination with a detachable reservoir, substantially as described.

Second, combining and arranging the detachable reservoir, the shank and spindle *Bj*, and cap *C*, in such a manner that the said shank and cap are held firmly and rigidly together independently of the reservoir, said reservoir being free to contract and expand independently of the connection between the shank and cap, substantially as described.

No. 45,695.—ISRAEL F. BROWN, New London, Conn.—*Roller for Cotton Gins*.—January 3, 1865.—In roller gins, when a bunch or wad of cotton tangled or matted presents itself to be drawn through between the roller and breast plate, the wad causes the latter to be forced away from the roller in order to open a passage for itself, thereby permanently bending the plate and subjecting it to injury from the stripper. The object of this invention is to prevent this.

*Claim*.—First, making the drawing-in or working roller of a roller cotton gin with a surface partly solid and partly elastic, substantially as described.

Second, putting elastic bands or rings around the roller of a roller gin in parallel and in continuous or in interrupted lines, substantially as described.

No. 45,696.—ANDREW BUCHANAN, Brooklyn, N. Y.—*Car Spring*.—January 3, 1865.—This invention consists of a spring composed of two arms, each of which is supported at two or more points by blocks of India-rubber or by springs of any other suitable material, in such a manner that the said blocks or springs form a yielding fulcrum for the arms, and also in the application of toggle arms connecting the ends of the arms which are supported by the springs, and the spring to be adjusted by a screw.

*Claim.*—First, a spring for cars or other vehicles composed of two arms, each of which is supported at two or more points by blocks of India-rubber or other equivalent material, substantially in the manner and for the purpose herein shown and described.

Second, the set screw *f*, in combination with the block *a* or its equivalent, and with the arms *A A*, constructed and operating in the manner and for the purpose substantially as set forth.

Third, the toggle arms *C C* applied in combination with the arms *A A*, and springs *a b b*, in the manner and for the purpose substantially as specified.

No. 45,697.—JACOB BUSSEY, Philadelphia, Penn.—*Propeller*.—January 3, 1865.—A strong framework of iron or other suitable material is constructed so as to be easily let into a bed made to receive it, said bed being attached to and projecting from the sides of the vessel, all the working or propelling parts, when in place, being under water. The said frame moves backward and forward in guides, the paddles being raised and lowered by the action of the water upon them in the backward and forward motion.

*Claim.*—The arrangement of the guides, frame, paddles, stays, and levers, the whole being arranged to operate as herein set forth and for the purposes herein specified.

No. 45,698.—HERMAN CAMP, San Francisco, Cal.—*Quartz Crusher*.—January 3, 1865; antedated September 17, 1864.—Within a cylinder of any desired dimensions and of any suitable material is placed a roller or crusher, or a series of dies composing such roller or crusher when bolted together, said roller being provided with interstices for the purpose of transmitting the substance to be crushed from its back to its front, while in motion. The cylinder is lined on the inside with a series of chilled-iron staves, and runs upon friction rollers.

*Claim.*—The combination of the cylinder *A* and its peculiarly constructed head piece *B*, with the dies constructed of a series of sections of cast iron as shown in figures 3, 4, and 5, supported and revolving upon friction wheels, the whole made, constructed, and operating in the manner and for the purpose herein described.

No. 45,699.—LEWIS R. CARPENTER, Lancaster, Ohio.—*Carriage Brake*.—January 3, 1865; antedated August 19, 1862.—A horizontal lever provided with a roller is attached to the carriage; said roller traverses a bar, which when the carriage begins to descend a hill is inclined so that the roller runs down it and automatically operates the devices which apply the brake. When the carriage passes upon a level or commences to ascend a hill, the roller runs back on the bar and releases the brake.

*Claim.*—Arranging the lever *R* horizontally, and making the weight upon it roll or traverse on a bar, substantially as described for the purpose specified.

Also, in combination with the lever *R*, and weight or roller *S*, the link *W*, lever *N*, and shaft *L*, and roller *X*, substantially as described.

No. 45,700.—A. B. CASS, Chicago, Ill.—*Cultivator*.—January 3, 1865.—This invention consists of a seat arranged upon one end of a lever and furnished with rollers to facilitate its movements. The lever extends over the draught pole, and is connected to it at its front end by a rod passing through a lip. Just in front of the seat is a cross-bar with a series of holes, through which pass rods fastened firmly to the plough standards. The ploughs may be thus gauged to run at any desired distance from each other, and by a motion of the seat, be moved laterally to conform to irregularities on the rows. At the forward end of the seat lever is a horizontal bar, along which runs an iron rod, furnished at its centre with a vertical bow, and at its ends with small bars or levers connected with scrapers, running in front of the wheels.

*Claim.*—First, the combination of the adjustable lever *A*, bar *a*, levers *b*, and ploughs *M*, arranged and operating substantially as and for the purposes set forth and shown.

Second, attaching the scrapers *J* to the axle, by one or more arms *K*, substantially as and for the purposes shown and set forth.

Third, the combination of the adjustable lever *A* with the rod *L*, provided with the arms *I* or their equivalent, and the chains *h* operating as and for the purposes shown and specified.

Fourth, the employment of one or more rollers *H* to facilitate the lateral motion of the lever *A*, operating substantially as shown and described.

Fifth, the employment of the roller *I* in combination with the lever *A*, arranged and operating substantially as and for the purposes herein shown and specified.

No. 45,701.—FRANCIS CLARK, Auburn, Mass.—*Breech-loading Fire-arm*.—January 3, 1865.—This invention consists in the application to a breech-loading fire-arm of a spring cartridge retractor, provided with a hook or catch for engaging with a pin on the hammer, so as to be operated by the same on cocking the arm, and having a projecting rod or arm extending forward so as to be also operated by hand if desired.

*Claim.*—First, the combination of the hammer *G*, cartridge extractor *b*, hook *m*, and retaining spring *h*, substantially in the manner and for the purposes herein described.

Second, the combination of the cartridge extractor as herein described with the extended arm *g*, so that it can be operated either from the front by means of said arm, or from the rear by means of the hammer, substantially as herein described.

Third, the application to the hammer of the regulating screw *3*, in combination with the cartridge extractor, substantially as and for the purposes described.

No. 45,702.—G. H. CLEMENS, U. S. A.—*Saw-mills*.—January 3, 1865.—This invention consists in providing on the head block a hinged knee, which turns down out of the way when a log is rolled upon the head block, so that a log can be rolled on from either side. The carriage is supported upon pedestals so arranged that the wheels under them can be adjusted to an angle with the carriage track, so that the carriage shall run steady and not tend to spring the log in the operation of sawing.

*Claim*.—First, the hinged knee adapted to be turned down out of the way, in the manner and for the purposes herein specified.

Second, the provision of supporting wheels or rollers F, set or capable of being set obliquely to the track, substantially as and for the objects set forth.

Third, the wheels F journaled in pedestals G, susceptible of angular adjustments beneath the carriage, as represented.

No. 45,703.—M. C. DAVIS, Guilford, Ohio.—*Machine for Shearing Sheep*.—January 3, 1865.—This invention consists in forming a bar in four sections, each section being connected together by swivel joints in connection with a smaller bar to which the shears are connected, and provided with pulleys and cords whereby the shears are operated at right angles by the same.

*Claim*.—First, two bars J J' formed each of two parts *g g'*, connected together by swivel joints *h h*, and the bars connected by a joint I, which admits of them working in a direction at right angles with each other, in combination with the bar K to which the shears are attached, said bar being connected to the bar J' by joint M, similar to I, and all arranged substantially as and for the purpose specified.

Second, the shears composed of the fixed cutters *o o*, and the vibrating knife Q attached to the outer or front end of bar K, the knife being operated from the shaft B through the medium of the pulleys F H N, cords or bolts G O, crank *p*, connecting rod R, and arm *q*, all arranged substantially as set forth.

No. 45,704.—JAMES B. EADS, St. Louis, Mo.—*Mounting and Operating Ordnance*.—January 3, 1865.—The gun is mounted on a carriage or frame capable of being raised by steam or other power, and the improvement consists in the arrangement and connection of side steam-cylinders, whose piston rods operate, by means of toothed racks, upon toothed segment gears, with their rock shafts and arms, for the purpose mentioned. The invention also consists in the employment of an adjustable hand-capstan, having a worm gear upon its shaft, and capable of being thrown into and out of gear with the said elevating devices, so that the guns may be worked by manual power if desired.

*Claim*.—First, the employment of the cylinders E E, in combination with the racks *fff f'*, gears *g g g' g'*, and arms *h' h' h' h'*, or their substantial equivalents in effect, all being constructed and arranged to operate substantially as and for the purpose herein set forth.

Second, in combination with the other operative mechanical device, operating the frame H, the adjustable capstan R, substantially as and for the purpose set forth.

No. 45,705.—WILLIAM FENSTERMACHER, Shippensburg, Penn.—*Clod Crusher*.—January 3, 1865; antedated March 7, 1864.—A wooden cylinder of suitable size is provided with metallic blades running lengthwise of it. The cylinder being drawn over the surface of a harrowed field, either before or after sowing or planting, the blades crush and open the clods and dry lumps of the soil. A smoothing roller follows, which rolls and smooths down the soil thus broken up.

*Claim*.—The combination with the main frame A and arms or hangers C C and C' C' of the cylinder E, provided with blades G, and the rear smooth roller D, said parts being arranged and operating in relation to each other as and for the purposes set forth.

No. 45,706.—ELISHA FITZGERALD, New York, N. Y.—*Apparatus for Aerating Dough*.—January 3, 1865.—This invention consists in giving the dough an additional charge of carbonic acid after it has been mixed. The gas for supercharging is contained in a receiver, and by means of a pipe meets the dough in the passage as it is discharged from the mixer.

*Claim*.—First, supercharging the dough, already aerated in the mixing receiver, by forcing air or gas into it in the passage K, at the time the faucet is opened to permit the exit of the dough.

Second, forcing a jet of air or gas into the passage K at the time the dough is being expelled from the mixing receiver.

Third, admitting the air or gas under pressure to come in contact and be infused in the dough in its passage out.

No. 45,707.—JOHN M. FOLLETT, Atkinson, Ill.—*Seeding Machine*.—January 3, 1865; antedated May 14, 1862.—This machine consists of a combination of colters for cutting stubble, of ploughs for opening and properly preparing the earth for the seed, and of a seed-trough for sowing seeds of various kinds; the seed stopper, slides, and ploughs being so connected that the distribution of the seed may be stopped and the ploughs elevated simultaneously by a simple manipulation of the driver.

*Claim.*—The combination of the stopper slides F, bar G, and plough and colter frame, composed of the parallel bars I, with the bars *l m* attached, the slides F and plough and colter frame being connected to the bar G', and all arranged as shown, to operate as set forth.

No. 45,708.—JOHN W. FOSTER, Washington, D. C.—*Cancelling Stamp*.—January 3, 1865.—This invention consists of an adjustable gauge-punch, and annular cutter, made also adjustable, and a peculiar arrangement of set screws, by which the letters on the face of the stamp can be easily changed.

*Claim.*—First, a cancelling stamp, provided with an annular cutter C, and an internal gauge B, either one or both adjustable in relation to each other, substantially as and for the purposes set forth.

Second, the combination of the double set screws E F with the cutter C and gauge B, for the purpose specified.

No. 45,709.—T. E. GORDON, Brooklyn, Ohio.—*Crutch*.—January 3, 1865.—This invention consists in a method of adjusting a movable point in the bottom of the crutch, which can be raised up or pressed down by the cross-piece, and held firmly in either position by turning up or down respectively; the side crutches hinged to each side of the cross-piece. The India-rubber spring aids in keeping the catches in position.

*Claim.*—The finger *g*, stops *g'*, and springs *n*, in combination with the tube *h* and crutch, when arranged and operating conjointly, as herein set forth.

No. 45,710.—HENRY C. GRIGGS, Waterbury, Conn.—*Picture Medals, Buttons, &c.*—January 3, 1865.—This device is composed of two disks or pieces of metal, enclosing a perforated ring, made to hold the pictures back to back. A loop pressed in the edge of one of the disks serves to support the frame.

*Claim.*—The countersunk or perforated ring *b*, in combination with the shell *a*, for securing the picture in the manner specified.

Also, a loop upon the edge of the shell, formed substantially as specified.

No. 45,711.—G. E. HARDING, Bath, Maine.—*Press*.—January 3, 1865.—This invention relates to a press in which two toggle levers are connected to a strap hinged to the frame and to the follower, and operated by a windlass. The rope from the windlass extends over pulleys in the outer or loose ends of the toggle levers, and along the upper edges of said levers through loops or under sheaves near their fulcrum, up over sheaves fixed to the frame, and down to straps secured to the rod which forms the movable fulcrum of said toggle levers, in such a manner that a strain on the rope has a tendency to raise the follower and the inner ends of the toggle arms, and at the same time to draw their loose ends together, and the follower is exposed to a powerful upward pressure.

*Claim.*—The toggle levers F, having their fulcrum on pivots projecting from the ends of the follower, and applied in combination with straps G, and with a rope or chain extending from a windlass over pulleys in the loose ends of said levers, and through loops or pulleys attached to said levers near their fulcrum, thence over pulleys fixed to the frame, and down to the fulcrum pins of the levers, substantially in the manner and for the purpose set forth.

Also, the straps G, hinged at one of their ends to the frame A, and at their opposite ends to the loose ends of the levers F, in combination with said levers and with the follower and windlass, constructed and operating substantially as and for the purpose described.

No. 45,712.—DANIEL C. HELLER, Reading, Penn.—*Shutter Bolt*.—January 3, 1865.—This invention is designed as an improvement on a bolt patented to the said Heller July 5, 1864, and consists in forming the circular inclines on the case of the bolt, instead of on the button, as in this instance referred to; otherwise the construction and operation of the two are substantially the same.

*Claim.*—The revolving button C or C', bearing against inclined planes *d* or *d'*, cast on the case of the bolt, or on a bridge placed over the same, and having its shank or pivot rivetted in a sleeve D or D', through which the bolt B or B' passes, all arranged substantially as and for the purpose herein set forth.

No. 45,713.—D. H. HISE, Salem, Ohio.—*Railway Coupling*.—January 3, 1865.—The object of this invention is to obtain a coupling for railway rails which will hold the ends of the same in line with each other, so as to avoid the injury now occasioned by the hammering of the car wheels against the projecting ends of the rail, by which the rails are soon injured, and their removal for repair rendered necessary long before any other portion thereof is materially worn.

*Claim.*—The two bars B B', one, B, provided with the key bolts C C, and the other provided with holes, through which and holes in the rails the key bolts or tangs pass, in connection with the keys D D, all arranged substantially as and for the purpose specified.

No. 45,714.—HENRY HISE, Ottawa, Ill.—*Snap-hook*.—January 3, 1865.—This invention relates to a snap-hook of that class which are provided with a snap and spring to close the

hook and prevent it from becoming casually detached from the article with which it is engaged, and at the same time admit of the article being readily engaged with, or fitted into, the hook, and disengaged from it when required.

*Claim.*—A new article of manufacture, the snap-hook, constructed and operating in the particular manner herein specified.

No. 45,715.—ERASTUS HOLT, Wheaton, Ill.—*Self-loading Hay Cart.*—January 3, 1865.—Two arms, one on each side, are pivoted to the lower part of the front end of the body, to which the rake-head or bar is attached by pivots. Above the rake-head a shaft is pivoted to arms firmly secured to the upper part of the sides of the body, which shaft is connected with the rake-head by chains and is rotated by a lever, thereby raising or lowering the rake. To the front ends of the upper arms is pivoted another bar, to which the draught pole is attached, and to the end of said draught pole a curved arm is attached, extending backward toward the body. A bar loosely clamping the rotating shaft is attached to the curved arm by a pin passing through holes in its upper end, thereby furnishing means for tilting the body.

*Claim.*—The rake N, having its bar O, provided between arms P P, which are attached by pivots to the sides of the body A of the cart, in combination with the shaft F, cords or chains h, lever K, and the arm I, or its equivalent, all arranged substantially as and for the purpose herein set forth.

Also, the bar G pivoted between the arms E E at the sides of the front end of the cart body, in combination with the arm I at the rear of the draught pole H, and the bar J attached to shaft F, all being arranged to operate in the manner substantially as and for the purpose specified.

No. 45,716.—M. R. HOWELL, Elizabeth, N. J.—*Moulder's Sprue.*—January 3, 1865.—The claim in this case sets forth the nature of the invention.

*Claim.*—A moulding sprue constructed with concave sides and curved ends, as a new article of manufacture.

No. 45,717.—J. T. P. HUNT, Manchester, N. H.—*Street Gas Lamp Posts.*—January 3, 1865.—This invention consists in constructing a lamp post with an enlargement for the location of a gas meter, with proper door and fastenings, as a new article of manufacture.

*Claim.*—Constructing a lamp post with an enlargement for the location of a gas meter, with a door and fastening, as described, as a new article of manufacture.

No. 45,718.—E. D. HURST, Lancaster, Penn.—*Thread Guide for Spinning Machine.*—January 3, 1865.—The claim and engraving fully sets forth the nature of this invention.

*Claim.*—The use of a glass cylinder introduced into the eye of metallic guides through a perforation made for that purpose, in the manner specified.

No. 45,719.—HENRY C. HUTCHINSON, Cayuga, N. Y.—*Lamp.*—January 3, 1865; antedated September 12, 1863.—In a circular or oval wick-tube are arranged chambers for the bearings of a shaft carrying a ratchet for raising and lowering the wick.

*Claim.*—The combination of the ratchet A or the shaft F with the circular or curved wick-tube B and basin or chamber C, as and for the purpose substantially as described.

No. 45,720.—WALTER INGALLS, Sanborton, N. H.—*Method of Coupling Boats.*—January 3, 1865; antedated September 12, 1863.—In the stern of a boat is constructed a coupling arrangement, while its bow is built so that when attached to the stern of another boat a continuous hull, as it were, is preserved through both boats, or as many as may be in the train, so that the channel made by the first boat may be preserved throughout the entire train, and all the boats are more easily moved in the water than they could be if separated.

*Claim.*—The connecting or coupling of boats for navigation on rivers or canals into continuous lines or trains, by the means or mode substantially as herein described and set forth.

No. 45,721.—HIRAM JORDAN, Milford, Ohio.—*Corn Planter.*—January 3, 1865.—On the front beam of this plough is a spring, to which is attached a cord extending back and attached to an arm which is secured to a crescent-shaped seed cylinder. From this arm the cord extends to near the handles, where there is a jointed lever to which the cord is fastened. The seed cylinder is filled with seed, and by means of the lever and cord the cylinder is turned and its contents deposited at pleasure, and the springs cause the cylinder to return to its original position.

*Claim.*—The arrangement of conveying hopper A, crescent-shaped dropper B, lever C, rod D, spring E, shave F G, and roller H, the whole being combined and operating together in the manner specified

No. 45,722.—E. B. JUCKET, Pawtucket, R. I.—*Pump.*—January 3, 1865.—A cylinder is formed with an induction and an eduction port on opposite sides, a ledge being formed around the interior beneath the lower line of these ports. A cylinder of much smaller diameter, and shorter, is formed with a surrounding disk near its top and another near its bottom. When

placed within the larger cylinder these disks fit into it, the lower one resting upon the interior ledge. The ports are thus between the disks, and vertical partitions transverse to the ports, serve to divide the water space equally. Valves are so arranged upon the disks that a piston moving in the smaller cylinder keeps up a continuous flow of water. Thus the operative parts of the pump may be readily removed for repairs and returned in perfect order.

*Claim.*—The combination of the cylinder and valve plates, constructed independent of the outer can, substantially as and for the purpose specified.

No. 45,723.—JOHN W. KINGMAN, North Bridgewater, Mass.—*Roofing*.—January 3, 1865.—This invention consists in covering the joints in a roof with a strip of metal, so formed as to make a yielding connection, so that the expansion or contraction of adjacent surfaces will not cause the joint to be exposed. This metal strip is nailed over the joint, and a strip of cloth is then cemented upon it.

*Claim.*—The spring plate *c d*, fastened as described and covered with cloth, cemented or pasted thereon, substantially as specified.

No. 45,724.—Z. P. LEACH, Danbury, Conn.—*Lifting Dock*.—January 3, 1865.—This invention consists: 1st. In the use of a series of toggle levers connected to each other, and to a rising and falling beam which supports the cradle in such manner that by exerting a strain upon a strap, rod or chain connecting the toggle levers, a powerful upward strain is produced on the beams supporting the cradle, and a vessel lying thereon can be lifted up and sustained above the surface of the water.

2d. In the application of supplementary beams provided with legs that may be turned in or out, and with dogs catching in suitable teeth in such a manner that when the cradle is attached to said beams and raised to a certain height, said beams, together with all the weight supported thereon, can be sustained by the dogs, and the main beams can be lowered to allow of turning in the legs and taking a fresh hold, in cases where the nicking capacity of the toggle levers is not sufficient to raise the vessel high enough out of the water.

*Claim.*—First, the toggle levers *D*, connected to each other by straps *E* or their equivalents, and operating in combination with the rising and falling beams *C*, substantially as and for the purpose herein set forth.

Second, the supplementary beams *C'*, provided with legs *b*, and applied in combination with the main beams *C*, and toggle levers *D*, in the manner and for the purpose substantially as described.

No. 45,725.—HIRAM LEMIN, Leonidas, Mich.—*Stump Extractor*.—January 3, 1865.—This invention is designed as an improvement upon a machine for extracting stumps for which a patent was granted to the present inventor, bearing date December 15, 1863. The invention consists in the application to the machine of a lever and springs or elastic bars, arranged in such a manner with pawls and ratchet, that the same means which are employed to extract a stump may be also used for gradually lowering it. In connection with the ratchet is a brake arranged in such a manner that an elevated body may, by a simple application of power, be held in suspension until it is necessary or convenient to remove it.

*Claim.*—The combination of the parts involved in freeing the ratchet wheel, to wit, the lever bar *P O*, bars *N*, pawls *K*, and segment wheel *Q*, with the lowering brake levers *U S*, and shoe *T*, substantially as described and represented.

No. 45,726.—MILES K. LEWIS and JOHN C. DURBIN, Iowa City, Iowa.—*Hay Loader*.—January 3, 1865.—This invention relates to the construction, arrangement and combination of the several parts designated by the claim, from which and the engraving it will be readily understood.

*Claim.*—The combination of the transverse rod *j*, lever *k*, shaft *d*, pulleys *c c*, cords *e e*, cross-bar *g*, with the rake, for the purpose of raising the rake with the gearing *a b*, when the vehicle is backed to which the machine is connected.

Also, the arrangement of the elevating belt of slats in connection with the rotating arms *P P*, for joint operation, as and for the purpose described.

No. 45,727.—H. S. LIPMAN, Philadelphia, Penn.—*Eyeletting Machine*.—January 3, 1865.—The punching and eyeletting operations are performed by the alternate right and left movement of the lever, and the novelty consists in the combination with such a machine of a punching die which makes a conical incision in the fabric with or without a central excised part.

*Claim.*—In combination with an eyelet machine, a die which makes a conical incision in the fabric for the reception of the eyelet with or without a central incision of a part, bearing the whole or a portion of the material to be embraced by the flange of the eyelet, substantially as shown and described.

No. 45,728.—HENRY MAYCOCK, Verona, N. Y.—*Cattle Stanchions*.—January 3, 1865.—Every alternate standard is pivoted at the lower end, the upper ends being connected by means of a rod. This rod is operated by means of a cord pulley and lever, so that by a single movement of the lever all the movable stanchions are adjusted.

*Claim.*—The arrangement and the combination of the lever J, rope K, operating on pulleys P, and the sliding rail L, when arranged and combined as herein described, for the purpose of operating the stanchions behind the cattle.

No. 45,729.—S. T. McDOUGALL, New York, N. Y.—*Apparatus for Carburetting Gases.*—January 3, 1865.—This invention consists of a vessel provided in the top with an aperture for the admission of a reservoir provided with a valve. The vessel is divided into two compartments by partitions, the said compartments communicating with each other by means of an aperture in the partition. One of the vessels is provided with one or more partitions secured alternately at the top and bottom of the chamber, arranged in such a manner that the last one shall always be secured at the bottom. The said partitions are provided with perforations which are below the surface of the hydro-carbon liquid when the vessel is in operation. In the spaces between the partitions are suspended sections of fibrous materials, so that their lower ends shall be immersed in the hydro-carbon liquid.

*Claim.*—First, the combination of a liquid or reservoir chamber B, a reservoir C, and a carburetting chamber D, for the purpose herein specified.

Second, the vessel A, composed of a chamber B and a chamber D, constructed and arranged substantially as and for the purposes herein set forth.

Third, the construction and arrangement of the chamber D, as provided with alternating close partitions or divisions 2 and 3, and intermediate fibrous or capillary divisions *h i j*, substantially as and for the purposes herein specified.

No. 45,730.—DANIEL McNAB, Moscow, Michigan.—*Cultivator.*—January 3, 1865.—This invention consists in constructing a cultivator or drill tooth with an upper curved portion, which has a bearing against some fixed part of the machine. The form of this curved portion and the position of the tooth determines the amount of resistance which it may overcome without being raised from the ground.

*Claim.*—Constructing a cultivator or drill tooth with an upper curved portion, which curved part shall have a bearing against some rigid portion of the machine when it is in motion, so that the form of such curved portion of the tooth, and the position of the tooth, shall determine the amount of resistance which it may overcome without its being raised from the ground.

No. 45,731.—B. E. MEAD, Peekskill, N. Y.—*Game.*—January 3, 1865.—The game consists of an imitation fort with a flagstaff. A number of holes serve to introduce balls, while a greater number of portholes serve to receive them, each being numbered in a special manner.

*Claim.*—First, the construction of the holes *z z* in the walls *a b c d*, in the manner and for the purpose substantially as set forth.

Second the making of marks, figures, or indentations in the bottom of a box, in combination with figured holes in its sides for indicating the position of a marble at rest after being driven from one of the holes, in the manner and for the purpose substantially as set forth.

Third, the use of a flagstaff, in combination with the holes in the sides of the box, in the manner and for the purpose substantially as set forth.

No. 45,732.—DAVID H. METCALF and H. J. SHOEMAKER, Battle Creek, Mich.—*Stove-pipe.*—January 3, 1865.—This invention consists of a stove-pipe with a smaller pipe arranged inside, in which is fitted a circular damper. The annular space between the two pipes has two balanced dampers, so fitted that when open they are supported by the two pipes.

*Claim.*—First, adapting balanced dampers *b b* to operate partially, when arranged at any desired point within the space formed by the two pipes A B, substantially as desired.

Second, so constructing and arranging the dampers *b b* within a space formed by the two pipes A B, that when these dampers are fully open they will be supported in this condition by the two pipes A B, substantially as described.

No. 45,733.—LORING MOODY, Malden, Mass.—*Car Coupling.*—January 3, 1865.—This invention consists of a car coupling, composed of a tripping lever, a curved pin, and a recessed bunter bar, arranged to operate automatically as the cars come in contact with each other.

*Claim.*—The combination of the separate curved pin C with the tripping lever B and the recessed bunter bar A.

Also, the combination of the separate curved pin C and its holding mechanism, viz.: the spring D and notch *f*, or their mechanical equivalent or equivalents, with the tripping lever B and the recessed bunter bar A, the whole being substantially as described.

Also, the combination of the slot *h*, or its mechanical equivalent, with the tripping lever, its curved pin, and the recessed bunter bar, the said slot being arranged in manner and for the purpose set forth.

No. 45,734.—JACOB MORGAN, Dundee, Ohio.—*Mode of Constructing Frames for Portable Houses.*—January 3, 1865.—This invention consists in a peculiar arrangement of braces,

posts, sills, &c., of a frame, whereby the same may be easily taken apart for transportation, and yet possess sufficient rigidity and strength when put up to answer its ends.

*Claim.*—A portable saw-mill frame, constructed and arranged with braces and tightening rods, substantially as herein specified.

No. 45,735.—E. H. MORTON, Oxford, Iowa.—*Ditching and Mole Plough.*—January 3, 1865.—This invention consists in a mode of attaching the sweep to the capstan, whereby the former is rendered capable of being adjusted, so as to be readily connected with, and disconnected from, the capstan, and admit of the latter being turned when the plough beam is drawn forward without turning the sweep, and without removing it from the machine. The colter is attached to the beam in such a manner that the former may be made to work at different angles relatively with the latter, as may be desired, and the colter and mole readily drawn out of the earth.

*Claim.*—First, attaching the sweep E to the capstan B, by means of the journal c and slotted bar D, on the latter, and the eye d on the sweep, substantially as and for the purpose set forth.

Second, in combination with the sweep E, the adjustable bail support G, constructed and applied to the capstan frame A, to operate as and for the purpose described.

Third, the securing of the colter K to the beam H through the medium of the slot a and adjustable plates J J', arranged substantially as herein set forth.

No. 45,736.—JOSEPH MUIR, New York, N. Y.—*Machine for Condensing Pap, or Slops of Clay, for Potter's use.*—January 3, 1865.—This invention consists of a whirling vessel having impermeable sides, with an inclined rim at the top, and attached to a rotating disk, combined with mechanism for rotating it, and a draw-off pipe.

*Claim.*—First, the whirling vessel having imperforated sides impermeable to water and inclining inward, or with a rim at the top, and combined with mechanism for rotating it, substantially as described, and substantially for the purpose hereinbefore set forth, and with the draw-off pipe h, or its equivalent, in combination with the whirling chamber.

Second, securing the whirling vessel to the rotating mechanism by means of a disk or platform e and the screw bolts g and g', or their equivalents, for the purpose of conveniently attaching or removing the whirling vessel.

No. 45,737.—JOSEPH MUIR, New York, N. Y.—*Process of Preparing Clay for Potters' use.*—January 3, 1865.—This invention consists in separating the slops of clay from the water by the action of centrifugal force upon the slops, when contained in a whirling vessel, having impermeable sides, an inclined rim at the top, and a draw-off pipe.

*Claim.*—As my improvement, in the process of preparing clays for potter's use, or for the market, the above-described improved mode of condensing the pap or slops of clay by subjecting the slops in proper quantities to the action of centrifugal force in a whirling vessel having imperforated and impermeable sides, substantially as described, whereby the clay, by reason of its adhesiveness and greater specific gravity, is condensed and separated from the water to the desired extent without recourse to straining, by which a portion of the clay is lost and adheres to the sides of the vessel from which it may be removed in a plastic state for potters' use, or to be prepared in the usual manner for the market as potter's clay.

No. 45,738.—WILLIAM NASH, Watertown, N. Y.—*Hand Punches.*—January 3, 1865.—This invention consists in applying a movable gauge to the lower limb of the punch, so as to be able to punch holes in a line with each other and with the edge of the material operated upon; and also in operating the cutting arm of the punch by means of a free lever, instead of making it part of one of the handles, according to the usual construction.

*Claim.*—First, a hand punch for cutting leather, paper, metals, and other materials, wherein the punch lever is independent of the movable arm of the handle of the punch, but is operated by the toe thereof, as by a free lever not connected with the punch lever by any joint or hinge, substantially as above described.

Second, the combination with a hand punch of any adjustable gauge i, substantially as and for the purpose above set forth.

No. 45,739.—JOHN E. NEILL, Brooklyn, N. Y.—*Steam Boiler.*—January 3, 1865.—This invention consists in superheating steam in the boiler in which it is generated. It is claimed as applicable to a Martin boiler, and the device consists of a number of tube boxes of the above-named boiler for the purpose of superheating steam, which is accomplished by removing a portion of the tubes of each and supplying their places with nests of tubes, arranged in such a manner that the steam from the steam-spaces of the boiler in its passage to the engine passes through them and is superheated.

*Claim.*—Incasing a portion of the tubes of a tubular steam boiler substantially as herein described, so that such casing shall extend on one side to the steam chamber of the boiler to receive steam generated in the boiler and conduct it to the tubes so incased, to be thereby superheated, and on the other side communicate with the outside of the boiler to carry off the steam after it has been superheated substantially as described.

Also, combining with superheating tubes, or the equivalent thereof, a water tube or tubes, or the equivalent thereof, for the protection of the tubes or flues of a superheater against the intense heat of the products of combustion, by causing such products to act first on the surfaces protected by water, substantially as herein described.

No. 45,740.—HARRISON OGBORN, Richmond, Ind.—*Grain Screen*.—January 3, 1865.—This invention relates to the combination of a riddle and screen suspended upon adjustable straps and having a very rapid motion communicated by means of a cam wheel and lever. The riddle is adjusted in the opposite direction to the screen.

*Claim*.—The cam wheel J and lever K, in combination with the riddle G, screen I, and adjusting straps E, the several parts being constructed, arranged, and operating substantially as and for the purposes set forth.

No. 45,741.—A. M. OLDS, Chicago, Ill.—*Lumber Measure*.—January 3, 1865.—The object of this invention is to obtain an instrument by which the number of superficial feet contained in boards of different lengths can be estimated. Within a suitable case is placed a disk in a vertical position, which by being made to pass over the surface of the boards indicates on a dial their superficial contents. Connected to the shaft of the disk is a sliding shaft, carrying on its end an endless screw or equivalent device through which the motion of the shaft of the measuring disk is transmitted to the arbor, carrying the index hands in such a manner that by simply adjusting the sliding shaft the instrument can be set for boards of different lengths. A sleeve projecting from the bottom of this case and terminating under the centre of the disk enables the operator to commence measuring with the edge of the board directly under the centre of the disk.

*Claim*.—First, a lumber measure arranged substantially as described, so that with a measuring disk of uniform diameter the superficial feet of boards of different lengths can be determined.

Second, the nest of wheels *f f f*, &c., applied in combination with the disk A, sliding shaft *h*, and index hands *c d*, substantially as and for the purpose set forth.

Third, the shoe *p*, in combination with the measuring disk A, constructed and operating substantially as and for the purpose described.

No. 45,742.—JOHN PEACE, Camden, N. J.—*Cutter Stock*.—January 3, 1865.—This invention consists in the construction and arrangement of certain devices which require a reference to the drawings to be understood.

*Claim*.—As a new article of manufacture, a cutter stock constructed as herein shown and described.

No. 45,743.—JOHN G. PERRY, South Kingston, R. I.—*Sausage Filler*.—January 3, 1865.—This invention consists in the combination of a cylinder with a sloping bottom, and a rack and piston head geared so as to fit the sloping bottom of the cylinder, in order that all the meat may be forced into the nozzle.

*Claim*.—The construction of the nozzle *s* and cylinder or case A with the piston head and rack B, constructed substantially as herein described and for the purpose set forth.

No. 45,744.—JOHN G. PERRY, South Kingston, R. I.—*Meat Cutter*.—January 3, 1865.—This invention consists in the combination of two plates cast with apertures, with bevelled edges into which the knives are secured, and also the combination of said plates and knives with the other parts of the machine, so that meat can be speedily cut for use.

*Claim*.—First, the combination of the knives *z z z* with the plates S, constructed substantially as described and for the purpose set forth.

Second, the combination of the knives and plates S with the case A and shaft B, substantially as herein described and for the purposes set forth.

No. 45,745.—J. G. PERRY, South Kingston, R. I.—*Stove-pipe*.—January 3, 1865.—A stove-pipe elbow cast in two segments, one having a bearded flange to shut over the edge of the other; close to this flange at either end of the elbow is a slot into which projections cast on the other segment fit. The elbow is smaller at one end than at the other. A damper is placed at a point midway between the ends.

*Claim*.—First, as a new article of manufacture a cast-iron stove-pipe elbow made in two parts and having one end made small enough to receive the pipe on the outside, and the other end large enough to receive the pipe on the inside, with the projections or fastenings, when constructed substantially as herein set forth and for the purposes specified.

Second, the combination of the damper with the two parts of the elbow, substantially as herein described and for the purposes set forth.

No. 45,746.—J. G. PERRY, South Kingston, R. I.—*Machine for Cutting Soap*.—January 3, 1865.—This invention consists of a trough, near one end of which slots are cut. A lever is so pivoted as to come directly under the slots, so that the wire R may be drawn down into them and through the soap.

*Claim*.—The combination of the wire R, lever B, and box A, substantially as herein described and for the purpose set forth.

No. 45,747.—J. G. PERRY, South Kingston, R. I.—*Window Sash Supporter*.—January 3, 1865.—This invention consists of two cams geared together by means of a tooth in one biting in a notch in the other. To the lower one is attached a lever or thumb piece, by raising which both cams are turned from each other, and the sash into the sill of which they are inserted is free to move in either direction. By releasing the lever the cams approach each other and impinge upon the frame of the window, one preventing the upward, the other the downward motion of the sash.

*Claim*.—The combination of the two cams or curved levers with the projections *o c*, constructed substantially as herein described and for the purpose set forth.

No. 45,748.—JOHN C. PLUMER, M. D., Portland, Maine.—*Boot and Shoe Last*.—January 3, 1865.—The object of this invention is to produce a last on which a boot or shoe can be made, which shall at once, without the tedious process of breaking in, conform and adapt itself to the contour of the solid structure of the bottom or sole of the natural human foot, so that the use of the boot or shoe shall tend to preserve its natural form, rather than to distort it.

*Claim*.—First, in the construction of a shoe last, the transverse inclined planes L G and Y Y, as described, in combination with the prominences G L, as described.

Second, the form and location of the prominences G L, as described.

Third, the form and location of the concavity D D D, as described.

Fourth, the combination of the planes, concavities, and prominences, as described.

No. 45,749.—RUFUS PORTER, Malden, Mass.—*Fan Blower*.—January 3, 1865; antedated June 23, 1864.—Two cams of peculiar form are arranged to revolve in contrary directions within a box of suitable shape. These cams are so regulated in their motion by means of a combination of pitmen outside, that portions of the periphery of each cam shall be constantly contiguous, while the two ends or wings of each move in proximity to the curved sides of the box.

*Claim*.—The regulator I J K L M N, in combination with the cams A B in box *c*, all combined for the purpose herein specified.

No. 45,750.—T. T. PROSSER and M. C. DARLING, Chicago, Ill., and K. A. DARLING, Fond du Lac, Wis.—*Cultivator for Gang Plough*.—January 3, 1865.—In this invention the plough beams diverge, and at their forward end are secured to a cross-beam by bolts and screw-nuts upon each side of the beam, so that they can be adjusted in order to throw two ploughs farther apart or nearer together. The tongue is operated by a pulley, and a chain or rope passing around a pulley: the pulley being actuated by a foot lever.

*Claim*.—First, guiding and regulating the movement of the tongue D by means of the pulley H, chain F, eye bolts G, attached to the side frame A and levers H, substantially as described.

Second, connecting the pair of draught arms B B, without regard to the number of pairs used, to the forward main cross-bar of the frame A by means of the double-nutted screw bolt L L, and which forms, with the plates M M, a hinge or other joint, so that while the said bars shall have a free vertical motion, they may be adjusted laterally without being detached or removed from the said cross-bar.

Third, constructing a cultivator or gang plough so that the interval between the shank N N which supports the ploughshares, may be increased or diminished without removing the shaft bars B B, or their connections, from the main cross-bar of the frame A, when each pair of shaft bars are capable of lateral adjustment, independent of the other pair or pairs.

Fourth, the combination of lever T, rods and polls U U, operating the ratchet wheel S upon the roller O, for elevating simultaneously the several ploughs of the gang or gaugs, substantially as set forth.

No. 45,751.—GEORGE B. PULLINGER, Germantown, Penn.—*Meat and Vegetable Slicer*.—January 3, 1865.—This invention consists in combining an adjustable rotating gauge plate with a rotary knife, also a frictional feed, for the purpose of moving the articles to be cut.

*Claim*.—First, the adjustable rotating gauge plate D, as described and for the above purpose.

Second, the scoring knives *c c c*, in combination with the rotating gauge plate, as described and for the above purpose.

Third, the slotted stay *r*, for securely holding the end of the cutter C, as above described and for the purpose specified.

Fourth, the frictional feed motion, as constructed, and operated as described for the above purpose.

No. 45,752.—W. T. RIPPON and THOS. R. ROBINSON, Providence, R. I.—*Self-oiling Spindle Bolster for Spinning Frames*.—January 3, 1865.—The claim and drawings sufficiently define the nature of this invention.

*Claim*.—First, the oil chamber, composed of a socket tube, with collars or flanges *d e*, applied in combination with the oil chamber *b*, formed within the rail, substantially as herein specified.

Second, the washer or gasket D, arranged within the oil chamber, and the nut C, applied to a screw thread on the bolster below the rail; the whole combined substantially as and for the purpose specified.

No. 45,753.—EDWARD S. RITCHIE, Brookline, Mass.—*Instrument to determine the Variation of the Compass*.—January 3, 1865.—This instrument consists of a box, like that of a surveying compass, with a revolving compass card on the bottom, and a rotary cross-bar with sights for ascertaining the magnetic bearing of distant objects. It is to be used in conjunction with the mariner's compass, on shipboard, to correct for local attractions. The manner of using must be gathered from the specification.

*Claim*.—The construction of the rotary compass cord A, the separate supporting index plate c, the rotary bar D, provided with sights or their equivalents, the clamp F, and the index pointer G, or its equivalent, the whole being arranged and applied substantially as specified.

Also, in combination therewith, the divided limb H and the auxiliary sight index I.

No. 45,754.—CHARLES H. ROBINSON, Bath, Maine.—*Press*.—January 3, 1865.—This invention relates to a press for baling, and consists in an arrangement of levers applied to the follower in such a manner as to render the press very compact, and also very efficient.

*Claim*.—The levers D D, attached to the platten or follower c, in combination with the swinging arms E E and the ropes O G, all being arranged and applied to operate in the manner substantially as and for the purpose herein set forth.

No. 45,755.—JOEL SANFORD, Polo, Ill.—*Water-wheel*.—January 3, 1865.—This invention consists in the construction of the buckets, each of which is formed of three arcs, described from several centres. The backs of the buckets are formed of two different curved surfaces, one being a part or a circle described from a centre which is at the centre of the radii e e, which intersects the radii b two-thirds of their length from the centre of a plate A.

*Claim*.—A water-wheel constructed with buckets C, each formed of three arcs described from the several centres d f' a', all as herein shown and described.

No. 45,756.—DANIEL SEXTON, San Gabriel, Cal.—*Steam Engine*.—January 3, 1865.—The novelty of this invention consists in the arrangement of two pistons, which work in separate cylinders, and are connected by a rigid bar, carrying two studs, in combination with a lever secured to the end of an oscillating shaft, on which is mounted a cog wheel or pinion, gearing in toothed racks attached to two slide valves in such a manner that, by the action of the studs striking the oscillating lever, the valves are changed at regular intervals, and one cylinder takes steam, while the other exhausts, and by these means a continuous motion is effected.

*Claim*.—First, the two pistons D D', connected together by the bar E, and operating in open cylinders A A', in combination with the abutment C, valve H H', and ports d d' d' d'', in the manner and for the purpose substantially as herein shown and described.

Second, the lever F and sheds a a', in combination with the pistons G and valves H H', constructed and operating substantially as and for the purpose set forth.

Third, hinging the lever F, as and for the purpose specified.

No. 45,757.—EDWARD L. SEYMOUR, New York, N. Y.—*Ore Separator*.—January 3, 1865; antedated December 9, 1862.—A charge of comminuted ore having been let down upon the bottom of a drawer with a perforated bottom closely fitting into the lower extremity of a hollow cylinder or trunk, the air in the trunk above the charge is rarified by means of an air pump or bellows. This causes the air within the mass to dilate, and with the help of the ambient air which rushes through the open interstices of the bottom drawer, to momentarily suspend the particles, after which they settle according to their specific gravity—the heaviest first. The refuse being thus in a stratum by itself may be gotten rid of.

*Claim*.—The combination of trunk or cylinder G with the movable drawer F, for the purpose of separating and separately delivering the refuse and the concentrated portion of each separate charge, as described.

Also, in combination with the cylinder G, the air pipe V, as described, and for the purpose described.

Also, the combination of the exhausting apparatus A, or its equivalent, with the movable box F, with or without the cylinder G, as described, and for the purposes described.

No. 45,758.—LYMAN SHERWOOD, Marine, Ill.—*Cultivators*.—January 3, 1865.—In this machine two rollers are made to pass, one each side of the row of corn, for crushing the sods. Just back of each roller, a bar runs diagonally, carrying several cultivator teeth. The draught pole is fastened at a point under the front of a long seat, and plays vertically in a slotted standard on the front of the frame. The driver, by moving forward on the seat, throws the ploughs out, and the rollers then act as traction wheels.

*Claim*.—First, the arrangement of the frame A A' A', with its teeth or ploughs c c, in combination with the rollers B B, all being constructed and arranged to operate substantially as and for the purposes set forth.

Second, the arrangement of the pole E with reference to the frame A and standard f, substantially as and for the purposes set forth.

No. 45,759.—EDWIN F. SHOENBERGER, Philadelphia, Penn.—*Car Seats of Railway Cars*.—January 3, 1865.—This invention consists of a longitudinal bar with teeth, in combination with a cog wheel, so connected to the back of each seat of a row in a railway car that one back cannot be turned without turning the whole, thereby preventing passengers from adjusting the backs to suit themselves, and at the same time affording means for turning the whole of the backs simultaneously.

*Claim*.—The bar *L* and its teeth, in combination with the cog wheel *f*, so connected to the backs of the whole row of seats that one back cannot be moved without disturbing the whole, as set forth for the purpose specified.

No. 45,760.—WILLIAM H. SHORT, Brooklyn, E. D., N. Y.—*Grates for Furnaces*.—January 3, 1865; antedated August 12, 1863.—This invention consists in the arrangement of spaces between the inner ends of divided grate bars, their outer ends being held in place by hooks catching over the front plate and over the bridge wall or over bars connected with or attached to the said plate and wall in such a manner that each grate bar can expand and contract without impediment or obstruction, and consequently the said bars are not liable to injure the structure of the wall in which the boiler is set, nor are they liable to bend or break by the expansion.

*Claim*.—The combination and arrangement of the grate bars *B* so as to form spaces *c* between their inner ends in the middle of the grate *A* and the bevelled shoulder of the adjoining bars, substantially as and for the purpose herein shown and described.

No. 45,761.—ROBERT A. SMITH, Philadelphia, Penn.—*Ash Cart*.—January 3, 1865; antedated July 21, 1863.—The cart is provided with a receptacle of a capacity sufficient to contain five ordinary loads. This receptacle has one permanent side and permanent ends, and is furnished with a tilting-box, operated by a shaft, by means of which its whole contents can be discharged with promptitude.

*Claim*.—A cart having a receptacle composed of a permanent side *D* and permanent ends *D'*, and the tilting or dumping-box *G*, hung or secured to a shaft *F*, and constructed and applied to the permanent portion of the receptacle, substantially as and for the purpose herein set forth.

No. 45,762.—J. GALUSHA STAUNTON, Buffalo, N. Y.—*Process of Preserving Organic Substances*.—January 3, 1865; antedated April 3, 1862.—This invention consists in preserving fruit, vegetables, &c., by covering them with a crust or shell of paraffine.

*Claim*.—The method of preserving fruits, vegetables, and the like, by means of forming an external crust, shell, or covering of paraffine in contact with the body of the fruit or thing to be preserved, substantially as described.

No. 45,763.—J. GALUSHA STAUNTON, Buffalo, N. Y.—*Vessels for Preserving Butter and other Substances*.—January 3, 1865; antedated April 3, 1863.—This invention consists in constructing a can or vessel for preserving fruit, &c., of wood, which is made air-tight by an internal lining of paraffine or its equivalent.

*Claim*.—A new article of manufacture, a box, can, or vessel for preserving fruit, vegetables, meat, butter, spices, and the like, constructed of wood, and made air-tight by an internal lining or enamel of paraffine or equivalent, substantially as described.

No. 45,764.—J. GALUSHA STAUNTON, Buffalo, N. Y.—*Cases for Preserving Animal and Vegetable Substances During Transportation*.—January 3, 1865; antedated May 5, 1863.—This invention is fully explained by the claim.

*Claim*.—First, a transportation case having a plurality of walls, substantially as described, in combination with a distinct ice-chest in connection therewith, for the purposes set forth.

Second, a skeleton framework of wood covered with leather, cloth, rubber, or other equivalent materials, in a manner to form a plurality of walls, which spaces may be filled with cotton, wool, or other poor conductor of heat or dead air, for the purpose and substantially as described.

Third, an ice-chest made separately from a transportation case, and so combined and connected to the outside of the case that a free communication of air from the ice to the interior case is secured, substantially as set forth.

No. 45,765.—J. GALUSHA STAUNTON, Buffalo, N. Y.—*Preserving Fruit, Meat, Fish, &c.*.—January 3, 1865; antedated May 18, 1863.—This invention consists in substituting hydro-carbon gas in the place of air in cans or vessels in which fruit or other substances are enclosed for preservation.

*Claim*.—The substitution of hydro-carbon gas in the place of air in the cans or vessels in which fruit or other substances may be enclosed for preservation, for the purposes and substantially as above set forth.

No. 45,766.—J. GALUSHA STAUNTON, Buffalo, N. Y.—*Air-tight Boxes, Cases, &c.*.—January 3, 1865; antedated May 18, 1863.—This invention consists in applying to the joints of wooden or board packages a thread or welt of rubber. The insides of these wooden packages are also coated or lined with paraffine, gum, or other similar substance, for the purpose of rendering the said packages air-tight.

**Claim.**—The application and use of a thread or welt of rubber throughout the joints of wooden or board packages, for the purpose and substantially as described.

Also, coating or lining the inside of such wooden packages with paraffine, warp, gum, or other impervious substance, in combination with the welted joint, for the purpose and substantially as described.

No. 45,767.—JAMES H. STEVENS, East Durham, N. Y.—*Manure-spreading Device.*—January 3, 1865.—This invention consists in applying to a wagon a movable bottom composed of an apron, which works on friction rollers, and arranged to operate as an endless belt; and in connection with this movable bottom is a fork, arranged to operate in such a manner as to discharge the manure evenly or uniformly from the wagon, as the same is fed to the fork by the movable bottom. Also, in the employment or use of a semi-conical screen attached to the rear of the wagon for the purpose of receiving the manure as it is discharged by the fork, thereby insuring a uniform distribution thereof upon the field.

**Claim.**—First, the two ropes *d d'*, with the shaft *F*, for operating the apron *D* and admitting of the same being moved back when the load is discharged.

Second, the semi-conical screw *K* at the rear of the wagon, when used in connection with a manure-discharging device, for the purpose set forth.

Third, the discharging fork *I*, arranged to operate substantially as herein described, in connection with the apron *D*, or its equivalent, for the purpose set forth.

No. 45,768.—LEONARD J. STAISTNY, Hoboken, N. J.—*Process for Preparing Refuse Wool for use.*—January 3, 1865.—This invention consists in placing the wool in a chest provided with a perforated false bottom and perforated top, and subjecting it to the action of steam. A stream of water is then forced through an aperture in one side of the chest and drives the wool towards the other side, and through an aperture provided with a net of wire, the large burrs and other bulky matter being left behind. The water is then pressed from the wool, and it is subjected to the action of a liquor, consisting of sulphuric acid of about 10° Baume, and a temperature of 120° Fahrenheit. The wool is left in this bath for about five hours, when it is taken out and washed and placed in the known centrifugal machine. It is then placed in a drying machine, consisting of two concentric cylinders, the outer one made of sheet-iron, and the inner one made of wire gauze, and subjected to heat. It is then subjected to the action of a picking machine, which removes the dust to which the burrs have been reduced.

**Claim.**—The treatment of the wool as described, by applying to it, in connection with the treatment of it by an acid solution as described, but prior thereto, steam, in the manner substantially as set forth.

Also, in connection with the treatment of wool by an acid solution, as described, and after the said treatment is completed, the application of a high degree of heat to the wool during the drying process, for the purpose of burning the vegetable parts which may still adhere to said wool, substantially as described.

No. 45,769.—JOSHUA C. STODDARD, Worcester, Mass.—*Horse Rakes.*—January 3, 1865.—This invention is explained by the claim.

**Claim.**—The operating of the rake, to enable it to discharge its load and to bring it back to a working position by means of the adjustable shaft *M*, pinion *P*, having the cam *R* attached to its inner side, composed of a circular rim *e* with two recesses *f f*, the fixed roller *g*, wheel *Q*, and lever *O*, with spring *d*, all arranged and combined to operate in the manner substantially as described.

No. 45,770.—HORATIO N. TAFT, Washington, D. C.—*Combination of Pen-rack, Calendar, and Letter-balance.*—January 3, 1865; antedated No. 27, 1864.—A pen-rack supports a cylinder containing rotating disks, representing the weeks, months, and days; an ordinary letter-balance surmounting the whole.

**Claim.**—The calendar, constructed and arranged substantially as described, and its combination with the pen-rack.

Also, the combination of the calendar with a balance or weighing scale, and also the combination of the letter-balance with a pen-rack, as set forth.

No. 45,771.—JOSEPH T. TOMKINS, New York, N. Y.—*Method of Securing Barrel Heads.*—January 3, 1865; antedated November 24, 1861.—This invention is designed to avoid removing hoops to take out or put in the head by inserting a ridge-shaped piece centrally between the two halves, (or less than half,) which, being driven in, forces these into position; or, by withdrawing this ridge, the halves may be approached and not fall out.

**Claim.**—The use of the piece *A*, substantially in the manner and for the purposes described.

No. 45,772.—B. T. TRIMMER, Rochester, N. Y.—*Grain Separator.*—January 3, 1865.—In this invention the shoe, fan, and fan-case are combined in one body, thus dispensing with an outer casing. This combination is all supported upon the fan shaft, which has a cam in the journal for giving a shake motion.

*Claim.*—Combining the shoe D and fan case E' in one body, thereby dispensing with an outer casing, substantially as herein set forth.

Also, supporting the shoe D and fan case E, combined in one body on the fan shaft *a* by means of the cams or cranks F, and in such a manner as to impart a universal vibration, substantially as herein specified.

No. 45,773.—ALFRED WALKER, New Haven, Conn.—*Caster for Furniture.*—January 3, 1865.—This invention consists of parallel grooves, which are both vertical and horizontal upon the pintle or shaft, and are traversed by a pin or projection within the socket, and so arranged that the caster is not liable to drop out of the socket, but can be taken out and put in instantly.

*Claim.*—A combination of vertical and horizontal grooves, with or without the rest *e*, with a pin to traverse the same, substantially as is herein described.

No. 45,774.—THOMAS H. WALTON, Ashland, Penn.—*Blasting Fuze.*—January 3, 1865.—This invention consists of a strip of wood, of a round or of any other desired form, in one side of which a narrow groove is ploughed of any suitable shape; in this groove a train of powder is laid, which is covered and protected by being overlaid with some waterproof material.

*Claim.*—The safety blasting fuze, constructed substantially as above set forth.

No. 45,775.—GEORGE W. WARREN, Ossian, N. Y.—*Broadcast Seeder.*—January 3, 1865.—In this machine two harrows for covering the seed are attached to a horizontal jointed bar in the rear of the seed distributor. These bars are pivoted to uprights in the centre of the harrows, and then extend beyond to the rear, thus preventing any overturning of harrows by obstacles.

*Claim.*—The jointed bar G, provided with the arm *p*, in combination with the harrow C, standard *m*, shaft H, and frame A, the whole so arranged that while the draught is applied centrally to the harrow, the latter is prevented from overturning, substantially as herein set forth.

No. 45,776.—E. P. WATSON, New York, N. Y.—*Combined Spur Carrier, Boot Drawer, and Pantaloons Guard.*—January 3, 1865.—A metallic plate is provided with a projecting flange and with screw holes. This plate is attached to a boot-heel so that the flange may prevent the bottoms of the pantaloons from getting under the boot-heel, may furnish a foot hold for drawing off the boot, and may serve as a support for spurs.

*Claim.*—A metallic plate, constructed substantially as above described, so that it can be attached by springs or screws to the heel of a boot, for the object hereinbefore specified.

No. 45,777.—WM. WEITLING, New York, N. Y.—*Sewing Machines.*—January 3, 1865.—This is a button-holing machine and uses five threads and a cord for the edge of the button-hole. Two similar eye-pointed needles (each carrying a thread) are secured to the same needle-bar: one penetrates the cloth, the other passes through the button-hole. Two other threads are so twisted by revolving thread carriers as to be laid upon and stitched to the surface of the cloth. The loops left below the cloth by the rising of both needles are both locked by the passing through them of the shuttle and its thread.

*Claim.*—First, the combination in a sewing mechanism of one or more revolving thread leaders and their supports with the adjustable frame of the cloth presser, so that all of them may be raised and lowered by the same mechanism, substantially as and for the purposes set forth.

Second, supporting the bobbins which supply the revolving double-thread carrier on a revolving table, for the purpose of preventing the threads from twisting before reaching the double-thread carrier, substantially as and for the purposes described.

Third, a feeding device, feeding the fabric by the action of a chisel-edged pad against the inclined under surface of an upper reciprocating pad or cloth pressure, thus operating by a pinching and direct angular pressure instead of by vertical pressure, substantially as and for the purposes set forth.

Fourth, the combination of the levers F and toggle arms G with the needle-bar C and thread-guide *g*, constituting my thread-delivering regulator, substantially as and for the purposes described.

Fifth, the application to a sewing mechanism of the turning table H' upon the bed-plate A, serving as a support to the fabric, and having the needle as the centre of motion when said table is suspended to the needle-arm, substantially as and for the purposes described.

Sixth, securing the guide-pins O to the adjustable frame F of the cloth presser, so that they can be raised and lowered together with said cloth presser, substantially as and for the purposes described.

Also a feeding device, with smooth surfaces, operating by the angular motion of two parts acting on each other, and thus gripping the fabric between them and moving it forward, substantially as described.

No. 45,778.—B. T. M. WELLS, Franklin Centre, Vt.—*Railroad Cars*.—January 3, 1865.—This invention relates to a means for facilitating the starting of the cars whereby considerable power is gained and the team greatly relieved. Loaded cars may, when they are started, be drawn with great facility by a team which would not be able to start them, or only with great difficulty. This invention is designed to obviate this trouble in starting the cars at any time or at any point on the track where it may be necessary for a car to stop.

*Claim.*—The loose pulley D with draft-chain I attached, in connection with the ratchet E, attached permanently to the axle C, and the pawl F placed within the pulley, to operate in the manner substantially as and for the purpose set forth.

Also, the eccentric, G G in connection with the rod b, passing through the pawl F, all arranged as shown, to free the pawl from the ratchet when the pulley is thrown back, as herein described.

Also, the coil-spring H, in combination with the pulley D, ratchet E, and pawl F, arranged substantially as and for the purpose specified.

Also, the stops g g attached to the eccentrics G G, when used in connection with the pulley D, spring H, pawl F, and ratchet E, for the purposes set forth.

No. 45,779.—P. WERNI, Manchester, Mich.—*Converting Rotary into Reciprocating Motion*.—January 3, 1865.—This invention relates to that class of devices for converting rotary into reciprocating motion, in which a pinion is used, which has its teeth cut away on one half its circumference, and which gears alternately in the upper and lower edge of a double rack, so that by imparting to said pinion a rotary motion the double rack receives a reciprocating rectilinear motion.

*Claim.*—The employment of inclined planes a d and spring e in combination with the double rack A and pinion B, constructed and operating substantially as and for the purpose set forth.

No. 45,780.—JOHN B. WEST, New York, N. Y.—*Garment Measuring*.—January 3, 1865; antedated September 8, 1862.—The nature of this invention is explained by the claim.

*Claim.*—Using instruments substantially such as specified, or their equivalents, upon or against the specified parts of the body, in such manner that right angles or corners are formed by them at the points where they cross or intersect each other, and from the sizes and forms thus ascertained may be readily drawn by running in from a perpendicular line, producing a bust of the measured body upon cloth, which bust, used in connection with certain measures herein indicated, taken from the body, but not embraced in the bust, and with the ordinary graduated tape, serves as a guide or basis from which to draught with certainty a garment the size and shape of the body measured as set forth.

No. 45,781.—ELONZO S. WHEELER, Westford, Conn.—*Buttons*.—January 3, 1865.—The button has a tubular shank, a washer between the hub and the cloth, and a washer outside the cloth, upon which latter washer the end of the tube is turned over.

*Claim.*—The combination of the two washers or disks with the hollow shank and the button, substantially as and for the purposes described.

No. 45,782.—THOMAS WILES and JAMES MCGINNIS, Muscatine, Iowa.—*Cultivator*.—January 3, 1865.—In this invention two vertically-adjustable plough beams are combined with two laterally and vertically-adjustable arms. All are connected with a horizontal shaft by cords, so that a hand-lever connected with the said shaft adjusts the ploughs.

*Claim.*—The combination of the rising and falling or vertically-adjustable ploughs O, with the rising and falling and laterally-adjustable ploughs I, when the latter are pivoted to shafts D D, and connected to the shaft P, so as to rise simultaneously with the ploughs V, on the turning of the shaft P, as and for the purpose herein set forth.

No. 45,783.—WILLIAM WHEELER, Poultney, Vt.—*Stove*.—January 3, 1865.—This invention consists of a spherically-shaped fire-pot, the upper part being pierced with numerous small holes, through which air is admitted down upon the whole surface of the fire. The products of combustion pass through one or more narrow flues into a radiating chamber, and thence escape into the chimney. In the top of the fire-pot is an open space extending from front to back between the flues, the bottom of which is perforated to admit air into the combustion chamber. The fuel door is perforated, and a damper in the fire-box regulates the draught.

*Claim.*—The employment of the spherically-shaped fire-pot or chamber of combustion B, or its equivalent, with numerous small apertures b, in the upper surface thereof, in the manner and for the purposes substantially as herein described and set forth.

Also, the employment of the contracted and oblong throat D, and the narrow circular flues or throats D D, in the manner and for the purposes substantially as herein described and set forth.

Also, the combination of the said throats or flues D, with the said fire-pot or combustion chamber B, and with the heating or radiating chamber c, substantially as and for the purpose herein described and set forth.

No. 45,784.—JOHN H. WILLIAMS, Oakland, Cal.—*Window Sash Suspenders*.—January 3, 1865.—This invention consists of a sash suspender so arranged that the cord, pulleys, and plate hook are completely hid from view and exposure to the weather, the whole being so nicely balanced as to overcome a large amount of friction which exists in other methods for suspending sashes.

*Claim*.—The arrangement and combination of the pulley plates M M, grooves L L, plate hooks B B, and slotted bar H, substantially as described, for the purpose set forth.

No. 45,785.—SETH WILMARTH, Boston, Mass.—*Machine for Drawing Bolts by Hydraulic Pressure*.—January 3, 1865.—This invention consists in grasping the head of a bolt to be withdrawn from wood by two or more wedge-shaped jaws, sliding in inclined slots within a cavity formed in the base of the outer cylinder of a hydraulic jack, whereby an immense force may be applied in an advantageous manner, the line of draught being directly in the line of the axis of the bolt.

*Claim*.—A bolt-drawing machine, consisting of a vice or jaws for grasping the bolt, in combination with a hydraulic lift for withdrawing the same, operating substantially in the manner herein set forth.

No. 45,786.—EDWIN A. WOOD, Utica, N. Y.—*Steam Pressure Gauges*.—January 3, 1865. This device is made of two circular disks of sheet brass, so corrugated as to present concentric indentations in order to impart to them greater stiffness. They are placed about one-fourth of an inch apart, and are held in position by a band of the same material, with which the edge of each disk is interlocked, and to which they are soldered.

*Claim*.—The combination of the disks A and B, or the ring D, or their equivalents, constructed and operating substantially as described, for the uses and purposes.

No. 45,787.—HIRAM YOUNG, New York, N. Y.—*Coffee-pot*.—January 3, 1865; antedated December 11, 1861.—This invention consists in the combination of two strainers with a tube and faucet arranged within the body of the coffee-pot. The cover of the coffee-pot is constructed with an opening at its apex, through which the top and its attachments may be inserted so as to serve as a funnel.

*Claim*.—The combination of the two strainers E F, tube C, and faucet B, arranged with the body A, substantially as and for the purposes set forth.

Also, constructing the top or cover G of the coffee-pot with an opening at its apex to admit of the inserting of the top and its attachments to the tube C, to serve the purposes of a funnel, as described.

No. 45,788.—WILLIAM G. BELL, Boston, Mass., assignor to WILLIAM G. BELL & Co.—*Meat Cutter*.—January 3, 1865.—Removable guides are combined with the cutter heads so that, by withdrawing said guides, the cutter-heads may be inverted and the knives cleaned and sharpened without being removed from the heads, and the introduction of meat to be chopped and the removal of chopped meat facilitated. The block is vertically adjustable, and receives a rotary motion by means of an endless screw and worm wheel.

*Claim*.—First, the employment or use of a movable guide I, in combination with the cutter head F, substantially as and for the purpose set forth.

Second, the endless screw M and worm wheel N, applied in combination with the centre pin C, bridge B, and block D, in the manner and for the purpose substantially as described.

No. 45,789.—JOHN E. BLYTHE, New York, N. Y., assignor to M. VEDDER and HENRY S. MYERS.—*Spring Gun*.—January 3, 1865.—This invention is explained by the claim.

*Claim*.—The use and application to guns and pistols of one or more revolving concave rollers or pulleys upon or around which India-rubber or other elastic material is made to pass, thus securing an additional length of stretch or propelling force in a given space, increasing in proportion to the number of rollers used.

Also, the combination of India-rubber in guns and pistols, with slide-roller and groove, as described.

No. 45,790.—THOMAS N. DAVEY, assignor to himself and THOMAS DAVEY, sr., Jeffersonville, Ind.—*Machine for cutting Chair Splints*.—January 3, 1865.—The object of this invention is to facilitate the process of cutting splints for chairs, &c., and it consists in a reciprocating bed upon which are holding-dogs to hold the stock, and, upon an adjustable cross-beam are attached, on either side, two horizontally adjustable plates, to which are attached sliding plates, and to these are hinged tool-carrying arms, so that, as the bed reciprocates, it carries the stock against the knife which cuts a splint, and when it reverses the direction the stock is brought in contact with a knife on the opposite side of the beam, which, in like manner, cuts another splint in the opposite direction to the first, and so continues till the stock is cut into splints.

*Claim*.—First, the reciprocating bed B, provided with the dogs c c' c'' c''', in combination with the endless belt C, with pin or stud g attached, and the slotted bar E at the under side of the bed in which the pin or stud works, substantially as and for the purpose specified.

Second, the beam J, with adjustable blocks K K, attached, the latter provided with the vertical sliding blocks L, having cutter bar or stocks M secured to them by hinges g, when said parts are used in connection with a reciprocating bed B, as and for the purpose specified.

Third, the means employed for automatically feeding the beam J, downward, to wit: the bent arm b', rod S, rock-arm R, pawl a', and ratchet b, in connection with the projection a on the bed E, all arranged substantially as set forth.

Fourth, the knives N N', attached to the bars or stocks M, in connection with the guard plates O, substantially as and for the purpose specified.

No. 45,791.—WILLIAM DELTON, assignor to himself, CHARLES W. BAKER, JAMES M. SHEEHAN, MICHAEL TOONEY, LAWRENCE R. FITZGERALD, and JAMES T. DERRICKSON, New York N. Y.—*Manufacture of Paper Stock*.—January 3, 1865.—This invention consists of a tank in which is a partition provided with a gate. In the smaller portion of the tank is a series of perforated steam pipes which radiate from a central pipe. In this portion of the tank the caustic alkaline solution is prepared by means of lime, steam being admitted through the perforated pipes in order to heat it and agitate it, after which it is allowed to flow into the larger portion by raising the gate. From this tank the alkaline solution is conveyed to another tank to operate on the fibrous material. The said tank is made with a perforated bottom, beneath which are steam pipes, by means of which the contents of the vat may be heated.

*Claim*.—First, the tank a partitioned off at b, and provided with the perforated steam pipes e e, for the purpose and as specified.

Second, boiling the vegetable fibre in the vegetable caustic alkaline solution when said vegetable material is sustained by a perforated bottom above heating pipes, as set forth.

Third, the treatment of vegetable fibre by an alkaline solution prepared in the manner and of the material set forth.

No. 45,792.—HENRY G. GLADDING, Providence, R. I., assignor to himself, W. COLEMAN & SONS, and JOSEPH RALPH.—*Drop Press*.—January 3, 1865; antedated June 20, 1863.—The hammers are elevated by means of a lifting strap passing between two revolving surfaces, which are made to gripe or release said strap at will. The necessary tension of the lifting strap is maintained by its being wound around a pulley, whose circumference exceeds the length of the strap. A spring serves to keep the strap taut during the rebound of the hammer, so that the strap may be seized and the rebound arrested. The ascent or descent of the hammer may be arrested at any point, or its velocity be accelerated or diminished, by means of a brake acting on the lifting strap. The guides are secured to the anvil, so that they are not disturbed by the blows or removal of the hammer. A vertically sliding punch removes the metal shape from the die.

*Claim*.—First, the combination and arrangement as set forth of the friction pulley D and the winding pulley G, with the strap of a drop-hammer, substantially as herein described, for the purpose specified.

Second, in combination with a suitable device for elevating a drop or hammer to any desired height at will, a spring force suitably arranged, acting with sufficient swiftness to take up any slackness in the lifting strap occasioned by the rebound of the hammer, substantially as herein shown and described, for the purpose specified.

Third, in combination with the lifting strap of a drop hammer, a break or stop, having a nipping or binding action, conveniently arranged with a hand lever or other suitable device, and operating substantially as herein shown and described, for the purpose specified.

Fourth, the peculiar manner herein shown and described of securing the guides to the anvil to effect the purpose set forth.

Fifth, constructing one of the guides with a movable piece, substantially as herein shown and described, for the purpose specified.

Sixth, the peculiar construction and arrangement herein shown and described of the hubs or heads S S S S, to effect the purpose set forth.

Seventh, in combination with the anvil and die of a drop press, the sliding punches and percurine lever K, arranged and operating substantially as herein shown and described, for the purpose specified.

No. 45,793.—JOSEPH FLEISCHMAN, New York, N. Y., assignor to himself and ALOES FLEISCHMAN, Olmutz, Austria.—*Process of Preparing Grain for Distillation*.—January 3, 1865.—This invention consists in adding carbonates of soda, or equivalent alkali, to the acid solution in which the corn is soaked, preparatory to distillation, in order to neutralise any sulphuric acid that may be carried over in the process of charging the water with sulphuric acid gas.

*Claim*.—The use of the method or process hereinbefore described of treating or preparing Indian corn and other cereals in the manufacture of alcohol and spirits, as an improvement upon Aloes Fleischman's patent of July 12, 1864, for a like purpose.

No. 45,794.—FRANKLIN L. HICKS, assignor to BENJAMIN and PHINEAS LAWRENCE, New York, N. Y.—*Inkstand*.—January 3, 1865.—This invention consists in the construction of an elastic bottom, with a cam-turning rod, so as to raise the ink to the cup when required.

**Claim.**—The combination of the elastic bottom of the inkstand with the turning rod and cam, for the purpose and as specified.

No. 45,795.—HENRY W. HOLLY, assignor to himself and JOHN T. FANNING, Norwich, Conn.—*Perpetual Calendars*.—January 3, 1865.—This invention consists of two rollers placed on a common shaft, and having an independent movement. Upon one of the cylinders are placed the names of the days of the week; on the other, the names of the days of the month, arranged in spiral lines. The calendar can be adjusted for each month by adjusting one cylinder, so that the day of the week on which the month commences comes opposite No. 1 on the other cylinder. The double rollers are supported in bearings in a paper-weight or inkstand, or any other article in use on a desk.

**Claim.**—The use of the rollers A B, marked as described, and applied to a common axle C, which has its bearings in suitable lugs rising from a paper-weight or in a pen rack, or other similar article, in the manner and for the purpose substantially as set forth.

No. 45,796.—HARRISON OGBORN, Richmond, Ind., assignor to himself and ALMOND T. CHAPIN, Paw-Paw, Mich.—*Fanning Mills and Grain Separators*.—January 3, 1865.—The features of novelty in this invention are too numerous to admit of a brief description as to their nature; but they are, in general terms, intended to adapt the machine to perform its work in an effectual manner, while tending to simplify the construction and reduce the cost of manufacture.

**Claim.**—First, the rocking support K, adapted to transmit motion to the shoe E, in the manner explained, and constituting a medium for preventing the existence of a counter current of air, thus increasing the efficiency of the operating current.

Second, supporting the shoe at its rear end by means of arms O, provided with elliptical or oblong apertures *o* fitting over screws or bolts having elongated heads *o'*, which admit of the ready adjustment of the arms O, as and for the purpose explained.

Third, the strip or flexible attachment P, for giving a vertical motion to the screw I, simultaneously with its reciprocating movement, substantially as described.

Fourth, the bearings J2, when curved in such a way as to allow the arms *t'*, which they support, to be readily removed for adjustment, while preventing their accidental displacement, as herein set forth.

Fifth, the combined screw and grain board D D', arranged and employed in the manner and for the purposes specified.

Sixth, the deflectors or guides J J, for regulating the fan blast when the same are pivoted directly to the main frame of the machine (in contradistinction to being pivoted to the shoe), and adjusted by means of the catches *j* and holes *a*, in the manner and for the purpose explained.

Seventh, in combination with the doors Q, of the fan case, the slotted bar R *r* and pins or projections *q q*, arranged to operate substantially as and for the purpose described.

Eighth, the circular distributor C2, employed to prevent the grain from accumulating at the centre of the screw D, substantially as and for the object specified.

Ninth, the grooves *d' d'*, in combination with the flange *f* of the screw F, said groove and flange admitting of the formation of a continuous conductor for the grain in both positions of the box D D' D'', substantially as explained.

No. 45,797.—JOSEPH RIDER, Newark, Ohio, assignor to himself and E. REMINGTON, Ilion, N. Y.—*Breech-loading Fire-arms*.—January 3, 1865.—The rotating breech piece is hung in the frame, working vertically and longitudinally, opening and closing the breech; the hammer is attached to the axis of the tumbler, and the latter firmly locks the breech piece before the hammer strikes the charge.

**Claim.**—First, the combination of the hammer, tumbler, and swinging breech piece, operating together, as and for the purpose substantially as described and represented.

Second, in combination with the tumbler, breech piece, and sear, the sear guard *e e* operating therewith, as and for the purpose substantially as described and represented.

No. 45,798.—THOMAS SWAN, Manlius, N. Y., assignor to himself, E. B. ALFORD, A. W. FIELD, and JAMES COBURN, Syracuse, N. Y.—*Reaping and Mowing Machines*.—January 3, 1865.—This invention relates to the means of imparting motion to the cutters, and will be readily understood from the claim and engraving.

**Claim.**—First, the wheel D, provided with teeth *e* carved at one side, as shown at 1, in combination with two pallets E E', connected by the rod F, all arranged to operate substantially as and for the purpose herein set forth.

Second, the rock shaft J, provided with the pendant arm K, and operated through the medium of the arbor I and arm G, when said parts are used in combination with the wheel D, pallets E E', and rod F, and all arranged in the manner substantially as and for the purpose set forth.

Third, the elastic bumpers N N, in connection with the vibrating arm K, substantially as and for the purpose herein specified.

No. 45,799.—**MARY P. WATERS**, administratrix of **W. E. WATERS**, (deceased,) East Bend, Ky., assignor to **AQUILA H. PICKERING**, Salem, Iowa.—*Pumps*.—January 3, 1865.—A hollow piston rod moved vertically in a cylinder, in its descent receiving water from below, and in its ascent receiving water from above, the latter supplied from a transverse channel, beneath the main cylinder, through a narrow channel at one side thereof, communicating through an opening at the top of the septum. Within the piston a valve is set centrally upon bearings so as to guide the alternate currents into the hollow rod, with the alternating movements of the pump.

*Claim*.—In combination with the hollow piston shaft G, cylinder A, and side passage or pipe B, a piston E, so constructed that the water in both the up and down stroke will be forced centrally through the piston into the tubular shaft G, substantially as described.

Also, providing the piston E with the independent port frames I I' and the valve K moving between them, so as alternately to close each in the upward and downward strokes, substantially as herein specified.

Also, the special construction and arrangement of the piston as a whole, the same being provided with the induction passages i i, ports I I, valve K, and angular space l, substantially as described.

Also, in combination with the pump cylinder A, side passage or pipe B, and valves g g' f f', the elongated passage D opening on one side upward by the mouth A, substantially as and for the purpose herein set forth.

No. 45,800.—**GEORGE WOODS**, Cambridge, Mass., assignor to **MASON & HAMLIN**, Boston, Mass.—*Musical Instrument*.—January 3, 1865.—This invention consists in a peculiar manner of coupling the keys, by which thirds, fifths, and octave notes may be played together.

*Claim*.—First, the wire coupler K, running diagonally from key to key of any chord, having bent arms, as described, one of which is operated upon by the key played, while the other operates the other key, under a mode of construction substantially as above set forth.

Second, the movable disconnected fulcrum bar A, constructed and operated substantially as described, to effect the construction and disconnection of the couples with the keys, as above set forth.

No. 45,801.—**COSME GARCIA SAEZ**, Madrid, Spain.—*Breech-loading Fire-arms*.—January 3, 1865.—The breech chamber, in which rotates the breech containing the charge, is the extension of the rear end of the barrel, or the barrel can be screwed into it. Although in one piece, its rear is open, but the jaws are in close proximity and are drawn together by a screw, operated by a lever on the top. When the faucet breech is in position for firing, the jaws are tightened, hugging the former more tightly, and making a gas-tight joint between the two. To load, the jaws are loosened and the breech turned back.

*Claim*.—First, forming the breech chamber, as described, of one piece, divided in the rear, so as to admit of contraction or expansion by the application of a suitable tightening device, as set forth.

Second, in combination with an expansible breech chamber, a new and actuating lever, constructed and arranged for operation for rendering the parts of the breech gas-tight, as set forth.

No. 45,802.—**EDOUARD H. VITTECOQ**, Beaumontel, France.—*Bolting Mill*.—January 3, 1865.—Coarse bran and crushed grain are introduced and caused to circulate freely within the bolt, so that the meal or flour is cooled and prevented from clogging the meshes of the bolting cloths. In this way cloths with very fine meshes may be employed, whereby the flour is more perfectly sifted. No tappets or beaters are made use of, and thus the injury which they cause to the cloth is avoided.

*Claim*.—The construction and arrangement of bolting mills, substantially as set forth, for operation in the manner and for the purpose described.

No. 45,803.—**M. B. MASON**, assignor to **C. V. DE FOREST**, **AMOS HOWES**, and **GEORGE VAN DERBURGH**, New York, N. Y.—*Method of Desulphurizing and Oxidizing Metallic Ores*.—January 3, 1865.—This invention relates to treating auriferous pyrites and other similar ores with the gases formed by decomposing steam, or superheated steam, by means of carbon or coal. The coal is placed in an ordinary fire-box, with grate bars, so as to allow a good draught of air to support combustion. Steam from a boiler, which may be heated by the waste gases of the furnace, is brought into the incandescent coal in the fire-box. The resulting gases are passed into the chamber containing the ore to be treated. For the purpose of regulating the temperature of the gases in the ore chamber, and to assist in oxidizing the metals, an additional supply of steam is passed into the ore chamber without being passed through the fire-box.

*Claim*.—Improved process for removing sulphur, arsenic, phosphorus, and antimony from auriferous or other metallic ores, and for oxidizing the said ores, by treatment of them with hydrogen and carbonic acid gases, substantially in the manner herein set forth.

Also, the admission of steam into the chamber wherein the metallic ores are heated, desulphurized, and oxidized, substantially in the manner and for the purpose herein set forth.

No. 45,804.—M. B. MASON, assignor to C. V. DE FOREST, AMOS HOWES, and GEORGE VAN DERBURGH, New York, N. Y.—*Furnace for Desulphurizing and Treating Auriferous and other Metallic Ores.*—January 3, 1865.—This invention consists of a furnace larger at the top than at the bottom, built over a combustion and gas-generating chamber. This combustion chamber is fitted with a grate and ash-pit, and is provided with one or more hollow perforated grate bars, or with equivalent pipes or tubes connected with a steam generator. The combustion chamber is formed by an arch, and extends through the walls of the ore chamber, its ends being furnished with doors and draught openings for the admission of air. The heat, gases, and air pass out of the combustion chamber directly into the ore chamber through a series of openings; and to prevent an excessive degree of heat in the ore chamber steam may be admitted through the passages. The ore is admitted through an opening in the top of the furnace, and is discharged through passages. The products of combustion pass out through openings into an encircling flue, and from thence into a suitable chimney, or they may be carried under a boiler, in order to utilize the waste heat.

*Claim.*—First, a fire chamber for generating gases by the decomposition of steam therein, substantially as described, arranged in combination with a separate chamber for containing and treating metallic ores, substantially in the manner and for the purpose herein set forth.

Second, the generation of gases by the decomposition of superheated steam within a suitable fire chamber, when said gases and like products of combustion in this fire chamber are conducted into and through a separate chamber containing metallic ores, for the purpose of desulphurizing and oxidizing said ores, substantially as herein set forth.

Third, when a fire chamber for generating gases is combined with a separate chamber for treating ores, substantially as hereinbefore described, I claim the introduction and use of steam in said ore chamber, for the purpose of preventing excessive heat therein, substantially as herein set forth.

No. 45,805.—JAMES ADAIR, Pittsburg, Penn.—*Lamps.*—January 10, 1865.—This invention consists in forming the points and opening in such a manner as to prevent the descent of the heat from the flame to the oil reservoir, the devices being designated in the claim and shown in the engraving.

*Claim.*—First, the construction of the screw *k* i, with a flattened spheroidal or lozenge-shaped chamber B about it, substantially in the manner and for the purpose described.

Second, making the spheroidal chamber of open work or perforated plates, substantially in the manner and for the purpose described.

Third, constructing the spheroidal or lozenge-shaped chamber of the cone *a* with a screw *d'*, box *e*, with tube and wick-adjuster, substantially in the manner and for the purpose described.

Fourth, the combination of two or more spheroidal or flattened chambers, substantially in the manner described.

Fifth, the combination of my specified insulator with a lamp, substantially in the manner and for the purpose described.

No. 45,806.—JOHN S. ADAMS, Taunton, Mass.—*Igniting Hand Grenades.*—January 10, 1865.—A friction or cannon primer is securely attached to the time-fuze inserted in the grenade, a hook which is attached to a strap secured to the wrist being inserted into a loop formed on the end of the wire of the friction primer after the grenade is taken into the hand. When the grenade is thrown the hook pulls out the wire of the friction primer just after the grenade leaves the hand, and thus ignites the time-fuze.

*Claim.*—The combination of the recess E, the metallic disk D, the hook slot F, the waterproof cap G, and the opening tape H, all arranged substantially as and for the purposes set forth.

No. 45,807.—W. D. AMENT, Muscatine, Iowa.—*Cultivator.*—January 10, 1865.—This invention relates to a block which is placed upon each of the standards supporting the shares. This block is secured by a pin, and is adjustable in regard to height, which thus regulates the depth of the ploughing.

*Claim.*—In combination with the standards D D, adapted to be operated by treadles so as to move the ploughs vertically and laterally, I claim the adjustable blocks G, resting upon the plates E, and employed to vary or regulate the depth to which the ploughs penetrate the ground, in the manner herein explained.

No. 45,808.—JONATHAN BALL, Elmira, N. Y.—*Machine for Manufacturing Cigars.*—January 10, 1865.—This invention consists in having a suitable table upon which is fixed a mould passing perpendicularly down through the leaf of the table. On the top of the mould is an adjustable cup or hopper, in which the tobacco is placed. On the back of the table is a post with a projection on the top, extending forward, through which is a wire extending to the bottom of the mould; this wire also passes through a follower that is used for pressing the tobacco into the mould.

*Claim.*—First, the use of a wire *c*, and tamper F, perforated through its longitudinal cen-

tre, as described, in combination with the mould *c*, or its equivalent, and with a suitable wrapper, constructed and operating substantially as and for the purpose herein described.

Second, the method, substantially as herein described, of introducing the filling of a cigar around a central wire, for the purpose of producing a central draught.

Third, manufacturing cigars by first inserting the wrapper into a mould and afterward filling in the tobacco, substantially as herein specified.

Fourth, in combination with a machine constructed as herein described, I claim the cupor funnel *G*, employed to hold the wrapper in position, and admit of the introduction of tobacco after the tamper is inserted, as explained.

No. 45,809.—JOHN BEST, Pittsburg, Penn.—*Manufacture of Glass*.—January 10, 1865.—This invention consists in making crystal glass by substituting coarse granular marble for the slaked lime generally used in the batch. The batch used in this invention consists of granular marble pulverized, clean sand, soda-ash, and nitrate of soda.

*Claim*.—The use of the ingredients hereinbefore described, which I call granular marble, as a substitute for slaked lime or oxide of lead, in combination with the other ingredients composing the batch or mix, as herein before specified, or some of them, or their equivalents, in the manufacture of crystal glass, substantially as herein before described.

No. 45,810.—JACOB W. BOPE, St. Louis, Mo.—*Harvesters*.—January 10, 1865.—This invention consists of two levers which radiate from movable centres, and are combined with segments upon the main frame in such a manner as to effect a perpendicular up and down motion of the finger-bar in front. In connection with the levers and the segments are used hinged stirrups for attaching and moving the finger-bar as required. The reel is raised and lowered by means of the levers extending under the shaft, and connected with the finger-bar, whereby the reel is kept equidistant from the cutting mechanism.

*Claim*.—First, the levers *D D*, radiating from movable centres, in combination with the segments arranged on the main frame, for effecting a perpendicular up and down motion of the finger-bar in front, as described.

Second, the combination of the levers *D*, the hinged stirrups *E*, and the segments *C*, for attaching and moving the finger-bar, in the manner described.

Third, raising and lowering the reel, by means of the levers extending under the shaft, and connected with the finger-bar, as described, whereby the reel is kept equidistant from the cutting mechanism, as herein set forth.

Fourth, the arrangement of the sliding friction roller *f*, on the lever arms *a a*, as and for the purpose herein described.

No. 45,811.—JACOB W. BOPE, St. Louis, Mo.—*Corn Harvesters*.—January 10, 1865.—This invention relates to the means for gathering the stalks, and for forming the gavel and discharging the same. Behind the cutter on each side is hinged a table, the rear edge of which is free to conform to the ground, which, with the lower part of a bent rod, forms the bed for the gavel, and an inclined standard is attached to the frame as a guide for the stalks to this bed. The aforesaid rod passes through a loop at the lower end of the guide, and is then bent upward to the upper part of the guide, to which it is pivoted, and is then bent inward over the frame and attached to a foot lever, the motion of which withdraws the lower part of the rod from under the gavel, which is then discharged.

*Claim*.—First, the sliding rod *f*, or its equivalent, provided with a foot lever, in combination with the guide *G* and hinged table *E*, substantially as and for the purposes specified.

Second, the reel *F*, provided with six or more straight arms, having one or more wires running through them, said wires crossing each other, or being bent to form such angles, that the stalks are gathered and discharged with ease and certainty, substantially as shown and described.

No. 45,812.—D. C. BREED, Lyndonville, N. Y.—*Coupling Thills to Carriages*.—January 10, 1865.—This invention consists in the use of an eccentric coupling bolt, so connected with the jaws that it cannot turn. The rattling of the bolt and its liability to get out of its place are thus avoided.

*Claim*.—The eccentric bolt *C*, provided with cams *a a*, in combination with the jaws *b b*, thill hook *d*, and packing *E*, substantially as and for the purpose herein set forth.

Also, securing the eccentric bolt in place, when thrown back, by means of the depression *g*, formed partially in the jaw and partly in the cam *a*, into which depression fits the rim *h* of the nut *G*, the whole arranged and operating substantially as and for the purpose herein specified.

No. 45,813.—WILLIAM BURNET, New York, N. Y.—*Paper File*.—January 10, 1865.—This invention consists of two plates of wood, one being longer than the other. They are held together by a metal loop and spring, which hold the papers by an equable pressure.

*Claim*.—A file made of two leaves secured together by a hinge bar and kept together by means of spring pressure thereon, all made and operating substantially as above described, or their mechanical equivalents.

No. 45,814.—**BENAJAH J. BURNETT**, Mount Vernon, N. Y.—*Ventilator*.—January 10, 1865.—This device is designed for roofs of houses, &c. The body is divided by intersecting partitions with four or any desirable number of chambers. At the top and bottom of the said chambers are deflectors; the first being inclined downwards, and the latter upwards. A wide overhanging cap covers the top, immediately under which, and opposite the upper deflectors, are narrow openings extending across all the chambers, and provided with hinged shutters, to which brackets are attached, so that they may be stopped in a downward inclined position if desired. The openings opposite the lower deflectors are below the roof.

*Claim*.—A ventilator composed of an upright trunk A divided into chambers *a a*, having openings *e f* above and below the roof, with opposite inclined deflectors *c d*, substantially as herein specified.

Also, the hinged shutters *g g*, with their attached brackets *h h* so applied in combination with the upper openings *e e* of a ventilator, of a construction, substantially as herein described, that when open the said shutters form deflectors to encourage the entrance of air into said openings, substantially as herein specified.

No. 45,815.—**WILLIAM COX**, Philadelphia, Penn.—*Car Springs*.—January 10, 1865.—This invention consists in applying wooden or steel springs, or both, to a railroad car in such a manner that the weight of the car is distributed or transmitted to the bearings of the axles from each end, and from the centre of the car at each side of the same.

*Claim*.—The tapering springs D D secured to the sills *b b* of a railroad-car truck, and resting upon lips *a a*, projecting from the journal bearing C, all being arranged to operate in the manner and for the purposes herein described.

No. 45,816.—**LOUIS CRAMER**, Brooklyn, N. Y.—*Spinning Top*.—January 10, 1865.—This invention relates to tops where a spring is used to give rotation, and in this case a notch in the lower end of a tube is used to hold the top, which has been wound up, until by pressure it may be disengaged simultaneously with the spring.

*Claim*.—A notch *e*, in the hollow arbor *b*, in combination with the ratchet teeth *g* on the barrel *c*, which encloses the spring *d*, and with the pin *f*, projecting from the shank of the top, constructed and operating substantially as and for the purpose set forth.

No. 45,817.—**W. H. CRICHTON**, La Porte, Ind.—*Seeding Machine*.—January 10, 1865.—In this invention rotating-pointed wheels are fixed upon the shaft in the seed box, between each of which wheels are inclined planes to carry the seed to the openings upon the rear side of the box. A perforated plate can be adjusted so as to register wholly or partially with the seed openings. These wheels are operated from the axle, and thrown out of gear by a hand lever at the driver's seat.

*Claim*.—The rotating-pointed wheels J, fitted on a shaft I within the seed box H, with double-inclined planes *c c* between them and the wheels, working in recesses *b* in the rear side of the seed box, in combination with the fixed perforated plate L and the adjustable perforated plate M at the rear of the seed box, all arranged substantially as and for the purpose set forth.

No. 45,818.—**DAVID DECKER**, New York, N. Y.—*Piano-fortes*.—January 10, 1865.—This invention consists in having agraffs for the treble strings made with their heads projecting to one side of the screw, thus giving a firmer hold in the wood.

*Claim*.—The construction of the agraff used in piano-fortes, substantially as herein described, whereby the face of its head, which is toward the hammers, may be flush with or project slightly beyond the edge or face of the wrest plank, while its screw is entirely enclosed in the wood of the said plank, and a sufficient supporting thickness of wood is left on the outer side of it to obviate the necessity of securing it into the iron plate.

No. 45,819.—**J. FREDERICK DUBBER**, Brooklyn, N. Y.—*Pocket-book*.—January 10, 1865.—This invention consists in providing the flap with a metal spring which keeps it closed, and retains the outer folds of the book in position.

*Claim*.—A pocket-book, provided with a strip of steel *d* in the edge of its closing flap *c*, as a new article of manufacture.

No. 45,820.—**OSCAR T. EARLE**, Springfield, Mass.—*Valves for Steam-engines*.—January 10, 1865.—The object of this invention is to so arrange the steam ports in conjunction with a plain cylindrical slide-valve, having one or more grooves or recesses, that the valve shall be perfectly balanced, and be actuated by the simple reciprocating motion obtained directly from the piston rod.

Its novelty consists in the ports I through the valve leading behind its ends into the steam chests, and, at proper intervals, coinciding with the ports of the valve seats. The arrangement of the parts K and K' with the ports I and I', valve E, ports F and F', with piston B and valve E.

*Claim*.—First, a cylindrical slide-valve, constructed with one or more ports through it, the said port or ports leading behind the ends of the valve into the steam chest, and at proper

intervals coinciding with ports of the valve seat, substantially as and for the purposes set forth.

Second, the arrangement of ports F and F' with piston B and valve F, when operating substantially in the manner and for the purposes herein described.

Third, the arrangement of the ports K and K' with the ports I and I' and valve E, when operating substantially as herein described.

No. 45,821.—CHYRLES W. EMERY, Dorchester, Mass.—*Machine for Clipping Hair or Wool from Animals*.—January 10, 1865.—This invention consists in attaching to a circular cutting plate a series of shear blades by means of pivots, this circular plate having a cam annexed to it in which there is a zig-zag path in such a manner as to give a vibrating motion to the shear blades, and also in connection with this is a spring, pivoted to the back of the machine, for locking and unlocking the circular plate at proper intervals, so that it may remain at rest while the cut is being performed, and again revolve while the blades are open.

*Claim*.—First, a series of shear blades attached by pivots to a circular cutting plate in combination with a circular undulating path cam, formed in such a manner as to give a vibratory motion to the shear blades, substantially in the manner and for the purpose herein described.

Second, the device herein described for rotating the circular cutter plate, and locking and unlocking it at proper intervals, so that it may remain at rest while the cut is being performed, and again revolve while the blades are open, substantially as herein set forth.

No. 45,822.—SAMUEL L. FOX, Philadelphia, Penn.—*Tube Packing*.—January 10, 1865.—The object of this invention is to so arrange elastic material that tubes of oil and other wells or other surfaces, fixed or movable, may be packed by the expansion of its walls against a well or other external obstruction, and against a pump pipe or other inner obstruction, by means of a fluid being forced between the inner and outer walls of a flexible packing-box.

Its novelty consists of a packing case constructed with flexible sides, so as to pack tubes for oil wells or other purposes, and to render the packing-case movable and expansible.

*Claim*.—First, packing pump tubes of oil and other wells, or other tubes or pipes, by means of a movable packing case, with expansible sides, substantially as above described.

Second, the packing-case Q, constructed and operated substantially as above described.

No. 45,823.—DANIEL D. GITT, Arendtsville, Penn.—*Harvester*.—January 10, 1865.—This invention relates to the manner of applying a friction roller and its guiding box to the heel end of the cutting apparatus, and is explained by the claim.

*Claim*.—First, mounting the friction roller upon the pin which unites the connecting rod with the sickle, when the said roller occupies a central position in relation to both, as shown and described.

Second, in combination with the above, the employment of a box closed on top, for the double purpose of guiding and protecting the anti-friction connecting device, substantially in the manner described.

No. 45,824.—IRA HART, Clarksburg, W. Va.—*Head Blocks for Saw-mills*.—January 10, 1865.—The object of this invention is to simplify the devices for adjusting the log to the saw while on the head block, and it consists in a sliding-knee on which works a clamp that can be, by means of a lever attached to the shaft having a curved arm, connected with a link that is attached to the clamp and a spring catch, so that when the lever is operated the spring catch takes hold of and retains the clamp in such position in the knee that it will move the slide in either direction at the will of the operator.

*Claim*.—First, the sliding-knee B and clamp H in combination with the link G and shaft E, or their equivalents, when constructed substantially as and for the purpose specified.

Second, the combination of the clamp H, guide I, and spring M, when constructed substantially in the manner and for the purpose specified.

No. 45,825.—W. H. HARTMAN and SAMUEL SHELLER, Fostoria, Ohio.—*Combined Seeding Machine, Roller, and Drag*.—January 10, 1865.—This invention consists in attaching a harrow to a seeding machine, so that the harrow will have a lateral motion imparted to it by means of a crank and pitman connected to the traction roller and harrow.

*Claim*.—The special arrangement of the jointed dray F, lever G, chains g h, in combination with the seeding apparatus and adjustable rollers B B, when arranged and operating as and for the purpose set forth.

No. 45,826.—S. ROSS HIGGINS, Parma, Mich.—*Hay Loading Machine*.—January 10, 1865.—The object of this invention is to provide a machine for loading hay upon wagons from cocks or windrows in the field. Upon a mounted frame is placed a turn-table, to which a long arm is hinged, said arm being provided with a fork which has a guard. The machine is so connected with the draught animal that it may be drawn from place to place, the fork lowered and adjusted to its work, and then raised with its load over the wagon and discharged, the labor being performed by the animal, while the attendant guides the machine by means of a caster wheel, and manipulates the parts.

*Claim.*—First, the turn-table G, placed on a mounted framing A and having a fork bar J connected to it, operated by means of a rope N under the action of the draught animal, substantially as and for the purpose set forth.

Second, the guard M, with its forward and rear bars I' and I, and pivoted to the fork bar J, in combination with the pivoted fork K and the rope N, by tension, in which the guard is pressed down upon the hay, the whole arranged substantially as and for the purposes described.

Third, the caster wheel C, when used in combination with the framing A, turn-table G, fork bar J, and fork K, for the purpose described.

Fourth, the bar Q on the rope N, in connection with the notch o in the shaft H, and the rope E and spring S, for the purpose set forth.

No. 45,827.—OLIVER T. HOLBROOK, Rushville, N. Y.—*Reaping and Mowing Machine.*—January 10, 1865.—This invention is explained by the claim.

*Claim.*—First, the combination with the main frame c, constructed as described, of the secondary frame D and plate B, arranged and operating in the manner set forth.

Second, the cutters K, formed with a slit in the rear, as shown and described, when arranged upon and secured to the bar in the manner specified, whereby one part of the rear end thereof is elevated above the other, for the purpose and in the manner set forth.

No. 45,828.—EDWARD P. HUDSON, Washington, D. C.—*Manufacture of Steel.*—January 10, 1865.—This invention consists in decarbonizing iron by placing it in the puddling furnace and treating it as if it were to be converted into wrought iron. When the metal assumes the state of fine granular particles, it is exposed to a flame so regulated that it shall not oxidize the metal. When the decarbonization has been thus completed, the whole mass is removed from the furnace. The metal is then cooled and subjected to the action of stamps, in order to separate it from the cinder. The metal thus decarbonized is mixed with pig iron and melted.

*Claim.*—The manufacture of cast steel by combining decarbonized iron, prepared substantially as herein described, with pig or other carbonized iron, as herein specified.

No. 45,829.—SIDNEY HUDSON, Milford, Mich.—*Tallying Machines for Measured Grain.*—January 10, 1865.—The bottom of the box in which the grain is measured is of semicircular form, and closed by a swinging plate attached to a vertical bracket or plate pivoted at its upper part to the side of the box. By a crank movement this plate is moved back and forth, alternately closing the box and discharging the grain. A pawl upon the upper part of the bracket operates a ratchet wheel to give motion to a registering apparatus, such as have been before used.

*Claim.*—The combination and arrangement of the several parts which produce the result, in the simple, concise and effective form described.

First, the circular hopper slide L, as attached to oscillating plate B which works dog d, as described; also crank C, the journal of which passes through a slot in plate B, and is attached near the edge to ratchet R, which is held from turning back by dog S, which prevents slide L being closed without tallying, when the parts are arranged to operate as and for the purpose described. This combination will work several varieties of registers.

Second, the combination of the ratchet wheel E with cog wheel H, which works over the centre of E; also cog wheel z, which gears with H and works near the edge of E, one cog at a time extending beyond the edge of E, which, at every revolution of E, comes in contact with stop I, by which wheels z and H are moved forward one point on their respective dials.

Also spring D, which is used to keep the machinery in place, when arranged in combination as and for the purpose herein shown and described.

No. 45,830.—SAMUEL JACKSON, Philadelphia, Penn.—*Cartridges.*—January 10, 1865: antedated January 3, 1865.—This invention consists in having an exterior case with a tight joint, and a metal lining with a loose joint.

*Claim.*—The combined paper and metallic cartridge case, when constructed and arranged to operate substantially as set forth.

No. 45,831.—CHARLES JARVIS, Ellsworth, Maine.—*Root Cultivator and Weeder.*—January 10, 1865.—In this invention the front edges of the upright rectangular cutters are made to project beyond the horizontal blade, so as to divide the ground in advance, thereby leaving the rows or hills smoother. The cutters are inserted by their upper ends through a horizontal bar connected with the draught axle by arms, in the outer extremities of which the axle revolves.

*Claim.*—First, constructing the front edges *a* of the sides *g g* of the cutters G so as to project beyond the latter, substantially as and for the purpose described.

Second, the cutters G, arranged as described, in combination with the bar A, tongue B, and wheels F, substantially as and for the purpose specified.

No. 45,832.—FRANK G. JOHNSON, Brooklyn, N. Y.—*Bed Bottom.*—January 10, 1865.—This invention consists in applying the common cord to a simple rectangular frame in such a manner as to provide a desirable spring bottom for beds. The engraving will show the manner of cording.

*Claim.*—The peculiar manner in which the cord is laced into the frame A B C D, so that no two consecutive cords are parallel to each other, substantially in the manner and for the purposes herein set forth.

No. 45,833.—ADAM KECK, Montgomery, Ill.—*Cultivators*—January 10, 1865.—In this invention there are three leading features: first, in relation to the adjustment of the bearing wheels longitudinally, for the purpose of making the machine balance the driver when in the seat; second, in the attachment of the inner set of ploughs to a vibrating beam working upon a pin and placed transversely to the line of draught; third, connecting the outer plough beams with the adjusting plate for the wheels.

*Claim.*—First, the attaching of the axles C of the wheels B to plates D, secured to castings E at the under side of the framing A by means of bolts a passing through oblong slots c in the castings, substantially as shown and described, to admit of the wheels B being adjusted further forward or backward, to keep the machine in a proper equipoised state, as set forth.

Second, the plough beams G G, provided at their front ends with upright bars g connected by joints h to the castings E, and provided at their back ends with upright bars H, having each a notch i to receive a catch I, all arranged substantially as and for the purpose set forth.

Third, the springs K on the back part of the framing A, in combination with the upright bars H of the plough beams G G, as and for the purpose specified.

Fourth, the attaching of the plough beams L L by means of the uprights M and joints j to the pivoted plate N arranged on the framing A, substantially as shown, to admit of the working or moving of the ploughs Q, as set forth.

No. 45,834.—JOEL F. KEELER, Pittsburg, Penn.—*Mode of constructing Railroad Car-Trusses*.—January 10, 1865.—This invention consists in constructing the bottom or truss of a railroad car of sheet iron, with suitable bulk-heads connecting it with the trucks or running gear in such manner that the said bottom or truss will drop partly below the top of the wheels and between them, more especially at the middle of the car, thus affording space for holding a sufficient amount of liquids to nearly or quite freight the car, while about the usual space is left in the car for other articles above the truss.

*Claim.*—The railway car-truss, constructed and used substantially in the manner and for the purposes set forth.

No. 45,835.—GEORGE A. KEENE, Newburyport, Mass.—*Feathering Paddle-wheel*.—January 10, 1865.—The floats of this wheel turn on the spokes or radii of the wheel. There is a difference in the area or surface of the floats on the sides divided by their axis of motion, and hence are made to feather.

*Claim.*—Arranging the floats of a paddle-wheel in pairs at right angles to each other, one at each end of a shaft passing through the centre of the wheel, so as to present more area on one side of said shaft than on the other, in order that the one float, entering the water flatwise, in passing through the same shall gradually turn and emerge edgewise, while at the same time it is turning the opposite float so that it shall enter the water flatwise, substantially as described.

No. 45,836.—THOMAS KENNEDY, Branford, Conn.—*Securing the Necks to Door Knobs*.—January 10, 1865.—The knob, as is usual, has a cylindrical hole for the reception of the eye of the shank, but in this instance there are, on opposite sides of the hole, two narrow grooves which extend down to its bottom, and at the bottom of the hole these two grooves are intersected at right angles by a circular groove of the same width and depth. The eye of the shank has two spurs at its end corresponding to the two side grooves, and after the soft cement has been introduced into the hole, the eye is thrust in and down to the bottom of the hole and then turned partly around so that the two spurs shall lie in the concentric groove.

*Claim.*—Securing the neck to knobs substantially as and for the purpose herein set forth.

No. 45,837.—JOHN J. KIMBALL, Napierville, Ill.—*Treadles for operating Machinery*.—January 10, 1865.—This invention consists in constructing a treadle in such a manner that the weight of the operator will aid in operating it.

*Claim.*—The treadle D, hung centrally on a shaft a, provided with two pitmen C C, which are connected to reverse cranks B B on the shaft A, in combination with the foot piece E E, hung on shafts b b, which are fitted in the treadle, and all arranged to operate substantially as and for the purpose specified.

No. 45,838.—JAMES KLINE and VROOMAN BECKER, Chicago, Ill.—*Swinging Gear for Threshing Machine*.—January 10, 1865.—This invention relates to a method of communicating power to a threshing machine in such a manner that the machine may be moved as the wind changes, while the power remains stationary. It consists in the combination of a stationary hanger, two sleeves and a socket, and a movable hanger or stirrup, connected to the machine by a perforated adjustable plate.

*Claim.*—The combination of a stationary hanger with two sleeves and a socket, and a movable hanger or stirrup, with a perforated plate attached, and the hook, all combined and operating substantially as described.

No. 45,839.—DAVID LAKE, Smith's Landing, New Jersey.—*Fly Traps.*—January 10, 1865.—An angular wheel carrying the bait is made to revolve by clock work or other well known means, the bottom part always being in contact with the bait supply. A perforated hood covers about one quarter of the top and front of the wheel, and an insect passing under it on the wheel cannot get back. The lower front part of the wheel has a hinged lid or scraper always bearing against it, so that there can be no escape in that direction. An opening, however, is provided for the insect to pass into a front lighted box, which can be removed when desirable to destroy the swarm.

*Claim.*—First, the angular wheel A a', operating in connection with the cap D, and passage E, to conduct the flies in an undisturbed manner, to a point from which it will be impossible for them to regain their freedom, substantially as set forth.

Second, in combination with the aforesaid angular wheel, the circular trough G, adapted by its form to be readily inserted and removed, in the manner and for the purpose described.

Third, in combination with the said angular wheel, the pivoted gate H, weighted as and for the purpose described, and employed to cause the flies to leave the wheel A, and enter the receiver F, in the manner explained.

No. 45,840.—JAMES A. MACKEE, Boston, Mass.—*Dress Facing.*—January 10, 1865.—The facing consists of a strip of water-proof material and a strip of linen or other suitable cloth, sewed together at the edge, a piece of braid being sewed on the lower edge of the water-proof cloth which is first stitched to the hem of the skirt, the upper edge of the linen or other band being stitched to the dress a few inches above. The purpose is to protect the dress from the pucker and strain effected by a water-proof material sewed directly to it.

*Claim.*—The new manufacture or combination dress facing, as composed of the water-proof or enamelled cloth band, and the flexible linen band, or its equivalent, arranged and connected together in manner and to be used substantially as specified.

No. 45,841.—HOSEA LOW, Waukon, Iowa.—*Machine for cutting Sheet Metal.*—January 10, 1865.—This invention is intended for cutting sheets of metal at the proper angle at the sides and curve at the ends, to adapt them to the manufacture of pans, &c., and to cut out the circular pieces for the bottoms of the same. It cannot be intelligibly described in the space of a brief without reference to the drawings.

*Claim.*—First, the employment or use in machines for cutting sheet metal of two sets of cutters F F', arranged in one and the same oscillating frame E, or in two frames, the open ends of which point in the same direction, substantially as and for the purpose set forth.

Second, the combination of the cutter frame E, with the slotted shaft a, substantially as described, so that said frame can be lengthened and shortened from the centre.

Third, the combination of the central shaft a with the adjustable U-shaped standard D, and cutter frame E, and clamps H, substantially as set forth, so that the centre around which the cutters turn can be brought in any desired position in relation to the clamps.

Fourth, the radial sliding arms K K, applied in combination with the carriages I I, movable centre a, and cutter frame E, in the manner and for the purpose substantially as set forth.

Fifth, the employment or use of a slide M, carrying a pair of circular cutters i, and moving in rectilinear guides, substantially as described, for the purpose of cutting off bevels, as for squaring plates of sheet metal.

Sixth, the gauges L, applied in combination with the clamps H, substantially as described, and acting in the double capacity of gauges and of eccentric cams for compressing the clamps.

Seventh, the employment of the adjustable plate-holder N, in combination with the cutters F F', and cutter frame E, constructed and operating substantially as and for the purpose set forth.

No. 45,842.—JOHN B. MAHANA, Benson, Vt.—*Automatic Folding Gate.*—January 10, 1865.—This gate consists of bottom and top rails connected by pivoted slats. The centre pin of the hinges is placed in a horizontal position, and the upper hinge set further back upon the post than the lower one, so that the gate can be brought to a vertical position. By the operation of two cams and rods connecting with levers or bars, over which the wheels of the carriage pass on approaching the gate, the gate is thrown open, and a like operation closes the gate behind the carriage.

*Claim.*—First, the combination of the folding or rising and falling gate with the trippers D, for opening and closing the gate by the action of the wagon or other wheel in passing the gate, substantially in the manner and for the purposes set forth.

Second, the peculiar arrangement of eccentrics I, wires L, cords G G', and pulley H, for opening and closing the gate, substantially as described.

No. 45,843.—JOHN A. MASON, Brooklyn, New York.—*Ladies' Breast Pads*.—January 10, 1865.—The frame of this pad consists of a helical spring, the lowest coil or base of which is the base of the frame, the end of the wire being soldered to the side of this lowest coil at such point as may be selected with reference to the diameter of the pad. The spring is tied down to be covered within and without, each cover being secured around the base coil, the interior cover or lining being attached to the spring at the centre. When the cord holding the spring down is severed the pad assumes a dome-like form.

*Claim*.—The breast pads, constructed with the parts A, B, and C, substantially as above described.

No. 45,844.—JAMES A. MCGILLIRAE, Dyer, Ind.—*Presses*.—January 10, 1865.—This invention relates to a press for baling purposes, and of that class which is provided with a beater for compacting in the press-box the material to be acted upon previous to the pressing operation.

The invention consists in a means for operating the beater, and also in an improvement in the beater itself, as well as in the means employed for pressing the article after the beating operation has been performed.

*Claim*.—First, the employment or use of a cast-metal beater I, provided with holes *b*, to admit of the escape of air from the press-box, substantially as set forth.

Second, the trip wheel N, constructed and arranged substantially as shown, for operating the beater I, in combination with toothed wheels O and P, as described.

Third, the two levers E E, in combination with the inclined planes H H, for operating the follower F, substantially as set forth.

No. 45,845.—HARRISON B. MEECH, Fort Edward, N. Y.—*Rotary Boilers for the manufacture of Paper Pulp*.—January 10, 1865.—This invention consists in an improved arrangement of the pipes for introducing and withdrawing liquids from the boiler, and in an arrangement of the steam pipes so that they will not be clogged up by the pulp.

*Claim*.—First, the combination of the pipes *b' c' d'* and *d'*, with their respective stop-cocks P N and O, with the pipe *a C* entering into the rotary Y Y, in the manner and for the purposes above described.

Second, the perforated cap B, in combination with the steam pipe A *a a*, passing out of the rotary through its journals *a'*, in the manner and for the purpose above described.

Third, the combination of the pipe A *a a*, the steam chamber K, the pipe *g'*, and the stop-cock M, in the manner and for the purpose above described.

No. 45,846.—JOHN M. MERRYMON, Indianapolis, Ind.—*Manufacture of Prussian Blue*.—January 10, 1865.—This invention consists in preparing Prussian blue by mixing a solution of prussiate of potash with a solution of bichromate of potash, and after stirring well, adding to it a solution of sulphate of iron until the proper color is produced. The color is then deepened by adding more of the solution of bichromate of potash, and sulphuric acid added to neutralize any potash remaining in solution. The Prussian blue can also be prepared by adding to a solution of prussiate of potash a solution of acetate of lead and a solution of bichromate of potash, and then adding the mixed solutions to a solution of sulphate of iron.

*Claim*.—The use of a solution of bichromate of potash and a solution of acetate of lead, in the manner and for the purposes herein described.

No. 45,847.—HENRY J. MILLER, Shanesville, Ohio.—*Sawing Machines*.—January 10, 1865.—The object of this invention is to saw wood transversely, and it consists in the combination of the driving shaft, on which is a spur-gear wheel working in a pinion that turns the crank shaft, with the pitman attached to the same, working between two suspended cross-head guides, that can be adjusted perpendicularly by means of a shaft having pinions gearing into upright racks that support and adjust the guides.

*Claim*.—The combination of the shaft J, pinions *k i*, suspending racks H I, hangers D E, slideways *b c*, guides *d e*, cross-heads *l m*, and horizontal saw A, all arranged to operate as herein specified.

No. 45,848.—EDMUND MORRIS, Burlington, N. J.—*Fruit Box*.—January 10, 1865.—This invention consists in the construction of fruit boxes of thin veneer or any suitable kind of wood, pasteboard, or other material, and by means of a punch of proper size to cut out at one blow a strip long enough to form the four sides of the intended box, with a tongue at one end, which is fitted into a loop formed in one side of the box.

*Claim*.—The above described method of constructing fruit boxes without the use of nails or glue, whether made of wood or other material, and of whatever shape.

No. 45,849.—GEORGE M. MOWBRAY, Titusville, Penn.—*Ejectors for Oil Wells*.—January 10, 1865.—The object of this invention is to so arrange a series of devices that an eduction or blast pipe connected with an ejector of an oil well may be suspended, raised, lowered, or rotated at pleasure, whereby to correct the relative relations of the blast pipe with the eduction pipe, so as to deliver the blast of compressed air in such volume and at the precise distance which will produce the most effective result.

Its novelty consists in the frame constructed with one or more stuffing boxes to receive the tube connecting with the blast pipe; the collar *a* upon the tube *A*, screw *B* in combination with the female screw plate *C* and tube *A*, the hollow cap *G* in combination with the blast tube *A*, the combination of a *T* with the cap *G*, stuffing box *D*, and lugs to receive bolts *c c*.

*Claim.*—First, the frame constructed substantially as described, with one or more stuffing boxes to receive the tube connecting with the blast pipes, substantially as described and for the purposes set forth.

Second, the collar *a* forged upon or otherwise secured to the tube *A*, in combination with the hollow sleeve screw *B*, for the adjustment of the tube *A*, substantially as described and for the purposes herein specified.

Third, the hollow screw *B* and templet female screw plate *C* in combination with the tube *A*, substantially as and for the purposes described.

Fourth, the hollow cap *G* in combination with the blast tube *A*, substantially as described and for the purposes explained.

Fifth, the combination of a *T* fitted with a cap *G*, stuffing box *D*, and lugs to receive bolts *c c*, with templet and hollow screw, substantially as described and for the purposes set forth.

No. 45,850.—WILLIAM S. NICHOLSON, Providence, R. I.—*Machine for Forging File Blanks*.—January 10, 1865.—In this device the hammers or dies, four in number, are attached, with their faces towards each other, to the short arms of horizontal levers fulcrumed on the inside, each one respectively on the bottom, top, and two sides of a movable frame, and are operated by cams of suitable shape revolving on a horizontal shaft between their longer arms, which cause the hammers to give a succession of blows, while at the same time they are made to pass from heel to point of the file blank by a feed screw operated by a ratchet wheel and pawl, the movement of the latter being regulated to suit the amount of work to be done upon the different parts of the blank to be forged, which latter meanwhile remains stationary.

*Claim.*—First, swaging and shaping a file blank or similar article by the method and on the principle substantially as described.

Second, the method, substantially as described, of regulating and varying the rate of speed at which the devices for swaging the metal shall travel, by means of an irregular surface *K* moving with the swages, in combination with the mechanism by which such swages are moved, as herein specified.

No. 45,851.—A. B. NIMBS, Buffalo, N. Y.—*Elevators*.—January 10, 1865.—The nature of this invention relates to the construction of an elevator leg of wrought iron, the skeleton of the leg being formed of eight angle bars placed one at each corner of the back and front trunks, said angle bars being connected together by diagonal braces of flat bar iron, or by continuous plates of sheet iron, or both, riveted or bolted thereto, for the purpose of giving great strength and stiffness to the leg.

*Claim.*—A wrought-iron elevator leg, constructed of wrought-iron angle bars *C*, and connected and strengthened by wrought-iron diagonal braces *D*, or by sheet-iron plates *L*, the two trunks of the leg being connected at the top by the semicircular arches *e2 c3*, and at the bottom by the cast-iron foot box *A*, substantially as described.

No. 45,852.—JOSEPH W. NORCROSS, Middletown, Conn.—*Wire Fence*.—January 10, 1865.—This invention consists in a wire fence in which each section is constructed of one or more continuous pieces of wire extending over four sets of pulleys, two of which sets have their bearings on the end posts of the section, and the other two sets on adjustable posts in the middle, in such a manner that by moving said adjustable posts towards or from each other the tension of the wire is decreased or increased, and can thus be readily accommodated to the existing temperature; and furthermore, by using a continuous piece of wire the liability of the wire to break is materially reduced. The several strands of wire are supported and held parallel by brackets with oblique slots, cast or otherwise, rigidly attached to posts, which may be loose or fastened down to the ground. Before the wires are strained they can be easily introduced into the brackets, and by moving the movable posts an opportunity is obtained to force the wires apart when a person desires to pass through between them. The bearings of the pulleys are cast solid with the posts, so that the fence can be made cheap and durable.

*Claim.*—First, the use in the construction of a wire fence of one continuous piece of wire for each section, substantially as and for the purposes set forth.

Second, the pulleys *a b c d* attached to rigid posts *c c'*, and to movable posts *D D'*, and operating in combination with the wire *W* and with the right and left handed screws or their equivalents, substantially as and for the purpose described.

Third, the brackets *g'*, with oblique slots *h*, applied to movable or rigid posts *E*, and operating in combination with the wire *W*, substantially as and for the purpose set forth.

Fourth, casting the bearings of the pulleys *a b c d* solid with the posts *C C' D D'*, substantially as and for the purpose described.

No. 45,853.—G. H. NYE, Monmouth, Ill.—*Preparing Hay for Baling*.—January 10, 1865.—This invention consists in providing each end of each roller with flanges to confine the hay within the limits of the pressing surface.

*Claim*.—First, the rollers B C, when provided with flanges *c c*, substantially as and for the purpose herein specified.

Second, the combination of flanged crushing rollers B C, with the knives *g g*, substantially as and for the purpose set forth.

No. 45,854.—GEORGE PARR, Buffalo, N. Y.—*Manufacturing Screw-Drivers*.—January 10, 1865.—This invention consists in first rolling a sheet of steel of a width equal to the length of the screw-drivers to be cut from it, and somewhat thicker in the centre than upon either edge, and then cutting the screw-drivers from said plate by means of dies.

*Claim*.—Manufacturing screw-driver blanks or blades and other similar tools by the process substantially as herein described.

No. 45,855.—GEORGE T. PARRY and WILLIAM S. WARNER, Philadelphia, Penn.—*Method of Preventing Oil Barrels, &c., from Leaking*.—January 10, 1865.—This invention consists in saturating the staves of the barrels with paraffine by placing them in an air-tight vessel, exhausting the air, and then allowing the paraffine, in a fluid state, to flow in.

*Claim*.—The employment of paraffine to prevent leakage from barrels and other vessels of wood.

No. 45,856.—TOWNSEND POORE, Scranton, Penn.—*Water Gauges for Steam Generators*.—January 10, 1865.—The object of this invention is to so arrange its details that the height of water in a steam generator may at all times be manifested, whereby the danger of explosion may, to a considerable extent, be averted. Its novelty consists in the combination and arrangement of the cock, plug, tail stock, pipe, index hand, perforated vessel, and the cup of the discharge pipe.

*Claim*.—First, the arrangement, consisting of the cock F, plug G *c*, flanged tail stock C, segment pipe D, and index hand *g*, the whole being combined and fitted to the boiler substantially as and for the purposes herein described.

Second, so fitting the several parts of the apparatus together and to the boiler that the one plug G *c* answers the two-fold purpose of opening or closing the cock F, and of twining the segment pipe C D to any position desired, in the manner herein described.

Third, the application of a hollow perforated vessel H to the hollow drain-pipe of a try-cock, substantially as described.

Fourth, the application of a cup K to the inner end of the discharge pipe D, for determining the height of water in the boiler when there is no pressure therein, substantially as described.

No. 45,857.—HENRY PREUSS, New York, N. Y.—*Composition for Lining Barrels, &c.*—January 10, 1865.—This invention consists of a composition of glue, alum, litharge, and chloride of lime. The glue is first dissolved in water, and the solution heated to near the boiling point; the alum is then added in small pieces, and the mixture well stirred; the litharge is then dissolved in water and added to the mixture, the whole being continually stirred to prevent the litharge from sinking to the bottom.

*Claim*.—A composition produced by combining litharge with glue, or its equivalent, with or without other materials, for lining barrels or other packages of oil.

No. 45,858.—FITCH RAYMOND and AUGUST MILLER, Cleveland, Ohio.—*Fence Gates*.—January 10, 1865.—In this invention a grooved wheel is attached to the hinged end of the gate in such a manner that the centre of the wheel is perpendicular to the hinges of the gate. The wheel is placed in a horizontal position, and encircles the gate post to which the hinges are attached. A weight is suspended from the edge of the wheel furthest from the gate by means of a cord, which is supported on each side by a pulley. In opening the gate in either direction the weight is raised, the gravity of which will close the gate when the force which opened it is removed.

*Claim*.—The arrangement of the ring or hoop D, with the groove *f* and gate A, in combination with the rollers *e e*, cord *g*, and weight, when operating conjointly as and for the purpose set forth.

No. 45,859.—OLIVER P. REEVE, Tipton, Iowa.—*Beehives*.—January 10, 1865.—This invention relates to the construction and arrangement of several parts of the hive identified by the claim.

*Claim*.—The arrangement of the comb frame and comb guides, constructed as described, in combination with the groove *i* in the side of the hive and the double inclined bottom, substantially as and for the purposes specified.

No. 45,860.—CYRUS ROBERTS, Three Rivers, Mich.—*Cultivator*.—January 10, 1865.—The main frame, shifting plough frame, lifting lever, shifting mechanism, and driver's seat are so combined that the driver when on his seat can raise or lower the ploughs, or shift them,

laterally, without releasing his grasp upon the reins. With the shifting frame is combined a foot lever acting like a tiller, to enable the driver to shift the ploughs. The main frame, shifting frame, ploughs, and corn guard are so combined that they all vibrate on a common centre between the wheels.

*Claim.*—First, the combination of the main frame, the shifting plough frame, the lifting lever, and the shifting machine arm O P, with the driver's seat, when arranged for joint operation as described.

Second, the shifting foot lever R, constructed and arranged to operate as and for the purposes described.

Third, the combination of the shifting frame, the ploughs, and the corn guard with the main frame when constructed and arranged in operating as described for the purposes set forth.

No. 45,861.—CYRUS ROBERTS, Three Rivers, Mich.—*Cultivator*.—January 10, 1865.—The shovels are attached to their stocks by means of swivelling brackets, in order that they may be adjusted at various angles to throw earth upon or away from the crop. The shovel stocks are attached to the frame by means of brackets, pins or bolts, and clips, so as to secure a strong and yet free attachment. The shovels are mounted in pairs in an auxiliary frame arranged above the axles, and having both a vertical and lateral movement, the ploughs being all hinged on a common centre and playing between the wheels. The brackets to which the shovel stocks are pivoted are connected with the shifting frames by set screws and slots, so that the distance between each pair of shovels may be varied without changing the other parts of the mechanism.

*Claim.*—First, the combination of the double-ended shovels with their stocks, by means of the reversible swivelling brackets *e*, and bolts *c*, in the manner described, for the purpose of reversing the shovels when worn or injured, and of turning them sidewise to throw the earth more or less towards or from the plants as desired.

Second, the combination of the shovel stocks and shifting frame by means of the brackets J, bolts *j3*, and clips *j4*, as described, for purposes set forth.

Third, the combination of the shovels, the auxiliary or shifting frame, and the main frame, when constructed and arranged as described, for the purposes set forth.

Fourth, the combination of the plough stocks and shifting frame by means of the brackets J, slots *j'*, and set screw *j*, as and for the purposes described.

No. 45,862.—H. C. ROBINSON, Monmouth, Ill.—*Feeding Corn to Corn Shellers*.—January 10, 1865.—This invention consists of a bin containing compartments, with the bottom inclined to the centre, underneath which is an endless belt that carries the corn to the mouth or hopper of the corn sheller.

*Claim.*—The employment or use of an endless apron or carrier in connection with a crib or corn receptacle, provided with removable slats or boards *d*, at its bottom, substantially as and for the purpose herein set forth.

Also, a crib or corn receptacle divided into a series of compartments and provided with a well hole, arranged as shown, when used in connection with the endless apron or carrier and the removable slats, substantially as described.

Also, the arrangement of the endless apron or carrier E, with the bottom *i*, of the box F, and the spout G, for the purpose of carrying off the loose or shelled corn as set forth.

No. 45,863.—CHARLES H. ROBINSON, Bath, Me.—*Baling Press*.—January 10, 1865.—This invention consists in an arrangement of levers, arms, and a windlass, whereby a very simple and efficient means is obtained for operating the follower of a press box, and one which will work with little friction.

*Claim.*—The combination of the levers C, bars D, ropes F, and shaft E, all arranged and applied to the follower B, to operate in the manner substantially as and for the purpose herein set forth.

No. 45,864.—CHARLES D. ROGERS, Utica, N. Y.—*Shifting Gear*.—January 10, 1865.—This invention relates to a means whereby the pinion which gears into the large spur wheel of reaping and mowing machines may be moved or adjusted so as to render the long or crank shaft, and consequently the sickle, operative and inoperative as desired. The object of the invention is to obtain a means which will operate without subjecting any of the working parts to undue strain, jars, or concussions, and one which will be self-locking and simple in its construction and arrangement.

*Claim.*—The lever I, with cam J attached, provided with two notches *ff'*, in combination with slide E, connected with the pinion C, and provided with the pin K and the sleeve H, provided with the pin K', and arranged with the spiral spring G, all arranged to operate in the manner substantially as and for the purpose specified.

Also, the lever I and cam J, in combination with the slide E, provided with two pins K K', either or both being fixed or movable, when said pins are arranged so as to engage with or lock into the notches *ff'*, as set forth.

Also, the flange L, provided with the slot *i*, when arranged in relation with the box M, substantially as and for the purpose specified.

No. 45,865.—SEYMOUR ROGERS, Pittsburg, Penn.—*Loading and Unloading Hay Wagons, &c.*—January 10, 1865.—This invention has for its object facility in loading and unloading hay, &c., and also securing the load upon the wagon. This is attained by making the upright at the rear end of the wagon jointed, and attaching to it an arm by means of a joint, so that the upright and its arm may be folded over the load and secured by a rope or chain at the rear end of the wagon.

*Claim.*—The turning upright B, placed at the rear part of the wagon and composed of two parts *a* *b*, connected by a joint in combination with the windlass E, arm D and rope or chain F, all arranged to operate substantially as and for the purpose herein set forth.

Also, the same device for binding hay on the wagon, in combination with windlass H.

No. 45,866.—E. H. SAWYERS, Orleans, Iowa.—*Cultivators.*—January 10, 1865.—This invention consists in the arrangement of a lever and slot to communicate a side motion to the cultivator. By means of an angular shaft and rod, the draught is transmitted to the rear and heavier part of the machine.

*Claim.*—First, in combination with the lever L' and shaft L, the oblong slot *i*, formed and employed in the manner and for the purpose specified.

Second, the described arrangement of the adjustable cultivator frame I I', I<sup>2</sup> I<sup>3</sup>, the brace rods *k*, angular shaft M and draught rod N, the whole being employed in the manner and for the purposes set forth.

No. 45,867.—AUGUSTUS W. SCHARIT, St. Louis, Mo.—*Device for Producing Motive Power by the vertical rise and fall of the Tide.*—January 10, 1865.—This invention consists in the combination of a float, with a screw and valves for filling the float with water. The float consists of a rectangular box made water-tight, and provided with valves for the admission of water when the float has reached its highest point. To the float a nut is attached which works upon the screw, and imparts thereto a rotary motion which is communicated to the machinery to be driven by means of bevel gears, one of which is attached to the top of the screw. A continuous motion in one direction is secured by a ratchet and pawl, which are attached to the horizontal shaft that is placed directly over the centre of the screw. Modifications of this device have double racks working in pinions for communicating power and a single rack for the same purpose, and another with ropes or chains working on pulleys.

*Claim.*—First, the combination of a float, screw shaft and the valve or valves for fitting and emptying the same, substantially as shown and described.

Second, the combination of a float with the double rack for communicating the power, substantially as shown and described.

Third, the combination of a float with the single movable rack for communicating power, substantially as shown and described.

Fourth, the double-sided valves substantially as shown and described.

Fifth, the combination of the screw cog-wheels, ratchets, and pawls, substantially as shown and described.

Sixth, the combination of the single rack and double ratchets and pawls, substantially as shown and described.

Seventh, the arrangement of the double or twin pairs of ratchets and pawls, substantially as shown and described.

Eighth, the combination of the double rack and wheels with the lever and screw and slotted rod and screw attached to frame guide, substantially as shown and described.

Ninth, the endless-chain pulley, drum, or windlass, in combination with the endless band or chain rods, hooks, pulleys, beam, and hinged drop, substantially as shown and described for loading and unloading vessels and for other purposes.

No. 45,868.—R. SCHMITZ, Brooklyn, N. Y.—*Billiard Indicator.*—January 10, 1865.—The object of this invention is to protect the proprietors of billiard saloons, by compelling the players to complete each game without the power to prolong it, the indicators being so constructed as to forbid removal backwards.

*Claim.*—First, the notched shaft E, in combination with the slide C, cam rods *i* *i'*, index *e*, and scale *a*, constructed and operating substantially as and for the purpose set forth.

Second, the cam rods *i* *i'*, in combination with the notched shaft E, slide C, and spring catch *f'*, constructed and operating in the manner and for the purpose substantially as described.

Third, the swinging bar *m* and cam *l*, in combination with the slide C and registering device *v* *u*, constructed and operating substantially as and for the purpose specified.

No. 45,869.—JOHN SHEFFIELD, Pultneyville, N. Y.—*Drills for Boring Wells.*—January 10, 1865.—This invention has for its object the construction of a drill that will be capable of enlarging the shaft of an artesian well at its bottom. The invention is more especially designed for enlarging the bottoms of oil wells, so as to open more veins than the ordinary shaft will intersect.

*Claim.*—A drill for artesian wells, composed of the chisel bars C D and bent or oblique arm B of the drill rod *A*, connected together by pivots, and arranged substantially as and for the purpose herein set forth.

No. 45,870.—S. T. SHELLEY, Louisville, Ky.—*Railroad Axle Boxes*.—January 10, 1865.—This invention consists in a new mode of fastening a cover to an axle box, by means of a cam-joint hinge and a reciprocating spring bolt, so that the cover is securely held by the spring, whether open or closed.

*Claim*.—First, hinging the covers of axle boxes by means of a cam-joint hinge, constructed substantially as described, working on a reciprocating spring bolt, or its equivalent.

Second, making an enlargement *e* in the hinge A, for receiving the bolt head and spring *f*, in combination with the reciprocating bolt C and hinge A, for the purpose of protecting the spring and bolt from dirt and other obstructions, substantially as described.

No. 45,871.—SIDNEY SKILLMAN, Jersey City, N. J.—*Railroad Cars*.—January 10, 1865.—The object of this invention is to enable the engine and boiler of a locomotive car to be disconnected and run out therefrom whenever it becomes necessary so to do. This object is accomplished by having the engine and boiler independent of the car body, and attached to a truck. The invention consists in a novel construction of the car body, whereby, with a suitable arrangement of the engine and boiler upon the truck, the disconnection and running away of the truck, engine, and boiler from the car body are facilitated. It also consists in attaching the smoke pipe permanently to such a car, and making it detachable from the boiler, to facilitate the running out of the boiler from the car with the engine and truck.

*Claim*.—First, in combination with the placing of the boiler and engine of a locomotive car on a truck in such manner that the boiler is received within a compartment at one end of the car, the construction of the car with such an opening in the bottom or floor, and a door or other suitable opening in one end, as to permit the boiler to pass out with the truck when the latter is run out from under the car, substantially as herein described.

Second, the stationary platforms arranged within the car body and in relation to the boiler and truck D, substantially as herein described, to serve as standing places for the engineer, and as a protection against injury in case of getting off the track.

Third, in a locomotive car, having the engine and boiler detachable, attaching the smoke pipe permanently to the car, substantially as and for the purpose herein described.

No. 45,872.—C. V. STATLER, Wataga, Ill.—*Device for Shrinking Tire*.—January 10, 1865.—In this device the jaws are supported in upright standards, one of which is pivoted at the middle in a slot in one end of the frame, the other allowed to slide horizontally in a similar slot at the other end, both being connected by bars at the lower ends. By this arrangement, operating a cam behind the sliding standard forces it inward, while the connecting bars, moving therewith, operate the lower end of the pivoted standard, and cause the two jaws to approach each other.

*Claim*.—Two bars B C, one, B, fitted in the bed A by a pivot bolt *c*, and the other, C, arranged so as to slide therein, and the two bars connected at their lower ends by one or more bars D, and provided above the bed with the dies *f f*, in combination with the clamps F F, pivoted to the bars B C, the spring E, and lever J, provided with the cam K, all arranged to operate in the manner substantially as and for the purpose set forth.

No. 45,873.—D. D. STELLE, New Brunswick, N. Y.—*Weighing Buckets*.—January 10, 1865; antedated November 14, 1862.—One or more weighing devices are combined with the bucket and bail, so that when the former is suspended from the latter the weight of its contents may be ascertained simply by observing the weighing attachments. The bottom of the bucket is provided with one or more curved springs and a spring stop, so that, by withdrawing the latter, the weight of the bucket's contents forces the bottom open and the contents are discharged, whereupon the spring closes the bottom again.

*Claim*.—First, the weighing attachment *b c*, or its equivalent, in combination with the bucket A and its bail B, constructed and operating substantially in the manner and for the purpose described.

Second, the arrangement of springs *i* and spring stop *g*, in combination with the hinged bottom D of the bucket A, as and for the purposes specified.

Third, the arrangement of the rings R and Q guiding the string P, as described within.

No. 45,874.—JUDD STEVENS, Marengo, N. Y.—*Sleds*.—January 10, 1865.—This invention relates to "bob-sleds," and consists in so connecting the two bobs that each can have a degree of independent action, adapting themselves to inequalities in the road. The invention is limited to a specific combination and arrangement.

*Claim*.—Connecting the bolster C with the way *a*, by means of the rounded bearing *c* fitting in the depression *b*, for the purpose of allowing a free turning or oscillating movement of the bob, and employing the friction rollers *d f* to obviate the friction in the end movement of the bob in adapting itself to an irregular surface, the whole arranged, combined, and operating substantially as herein set forth.

No. 45,875.—ROBERT STEWART, Fultonham, N. Y.—*Water Wheel*.—January 10, 1865.—The object of this invention is to cause the water to act both by impact or percussion and reaction, which is attained by a peculiar form of the buckets and their mode of attachment

to the wheel. The novelty consists in forming the buckets with their oblique and inclined surfaces attached to the case with the bands in connection with the scroll.

*Claim.*—The buckets *d*, having the vertical, transverse, oblique, and inclined surfaces *e f f*, and attached to the case *b*, with the bands *h h* encompassing the inclined surfaces *f f*, in connection with the scroll *A*, all arranged substantially as set forth.

No. 45,876.—IGNATIUS STOFFEL, Washington, D. C.—*Artificial Arms.*—January 10, 1865.—In this invention the object of the trigger used in connection with ratchet bar and trigger spring is to enable the arm to be bent without operating the fingers when either closed or open. By pressing down the trigger the forked lever is disengaged from the sliding rod, thus allowing the arm to be bent without operating the fingers. In case the fingers are closed, the pressure of the projection on the ratchet bar holds the fingers in a bent position.

*Claim.*—First, the peculiar construction of the artificial hand and wrist joint, the palmar region of which is represented by a hollow metallic case with an elastic palm; the phalanges *t t t*, *t' t' t'*, and *t'' t'' t''*, operated by the springs *p p p*, representing the four tendons of the flexor profundus, and articulated by the guide rings *u u u*, representing the tendinous bands at the corresponding places of the natural hand; also, the hinged thumb and the thumb lever *q*, representing the flexor brevis pollicis, in combination with the stirrup *l* and the spring *m*, by which arrangement the elasticity of the cartilages of the natural hand is secured, as described within.

Second, the peculiar construction of rod *i* and ratchet bar *K*, in combination with the fork lever *a* fastened to the elbow, and the construction and arrangement of the trigger *d* with catch *e* and trigger spring *f*, as specified and for the purpose set forth.

No. 45,877.—CHARLES H. STRATTON, Munroctown, Penn.—*Digging Machine.*—January 10, 1865.—This invention consists of a machine for spading the earth, with steam as a motor, which object is accomplished by the use of spades or forks, of any suitable or desired numbers, arranged in such a manner that, as the machine is drawn along, they will penetrate the earth and lift and turn over the same in a manner similar to that of hand digging.

*Claim.*—The employment or use, in a steam digging machine, of a series of spades arranged in such a manner as to penetrate the earth, rise or swing upward with their load, and then turn one-quarter of a revolution to discharge the same, substantially as herein shown and described.

Also, the slots *g* in the shafts *F F*, having spiral outer ends *h*, in connection with pins *i*, fitted in the bearings *e*, and passing into the slots *g*, the shaft *G*, to which the bearings *e* are attached, and the crank shaft *B*, all being arranged to operate the spades *E E'*, as set forth.

No. 45,878.—WILLIAM A. SWEET, Syracuse, N. Y.—*Ovens for Converting Iron into Steel.*—January 10, 1865.—This invention consists of a converting chamber, the sides of which are of a thickness of one width of fire-brick, the bottom of the chamber being formed of fire-bricks set on edge, or of two thicknesses of fire-brick. The bottom rests upon two thicknesses of fire-brick laid in such a manner that openings will be left between the chamber and its foundation. The furnaces and grates extend along each side of the base of the converting chamber, and from end to end of the oven, leaving an opening at each end for the admission of fuel. A longitudinal line of fire-brick prevents the draught from passing from one furnace to the other. The outer walls of the furnace are made perpendicular from the base to the boshes, the boshes being on a level with the spaces, and designed to project the heat into them. Above the boshes the walls are made to incline inwards in order to confine the heat more closely to the sides of the converting chamber. At the top the spaces communicate with the interior of the converting chamber by means of holes which are made smaller towards the centre of the chamber than at the ends. The interior of the fire chamber is connected with a flue by means of passages, which are also made smaller at the centre of the chamber near the flue than at the ends.

*Claim.*—First, the combination and arrangement of the heating furnaces with the converting chamber *A*, substantially as described.

Second, the dead-holes *H*, in combination with the heating furnaces and chamber *A*.

Third, the boshes or angular projections *m m*, as related to the bottom of the chamber *A* and the dead-holes *H*.

Fourth, gradually diminishing the fire spaces *S S* from the boshes *m m*, to the openings *o o* at the top of the chamber *A*.

Fifth, the openings *o o o o o*, *p p p p*, substantially as described and for the purposes set forth.

Sixth, supporting the upper edges of the chamber wall from external pressure, substantially as described and for the purposes set forth.

No. 45,879.—GEORGE B. TAYLOR, Worcester, Mass.—*Manufacturing Cutter-bars for Harvesting Machines.*—January 10, 1865.—The pattern bar in this apparatus corresponds in its general form and dimension, as also in an eye formed upon one of its ends, to the cutter bar, but has projecting upwards, near one edge, a series of teeth, separated from each other by spaces equal to the spaces which should separate the holes in the cutter-bar, and has attached to it, near the end opposite to that on which the eye is formed, a loop or stirrup for

confining one end of the cutter-bar. In practice, the tapered extremity of the bar to be punched is passed through the loop, its edge abutting against the edge of the pattern, and is driven endwise until the eyes of the cutter-bar and pattern come in line with each other, when a bolt is passed through said eyes, and the two bars are thus, at that end, held immovably fixed to each other. Thus united, they are placed upon the table of the punching machine, a pawl depending from a stud on an adjacent part of the frame taking into the rack determines the distance which the bars must be moved upon the table for each successive hole. The series of holes are punched one after the other, beginning with the one nearest the eye, so that the elongation of the bar due to the operation of punching will be in the direction of the free end of the cutter-bar.

*Claim.*—Forming the holes for the rivets or bolts, by which the cutters are fastened to the cutter-bars in reaping and mowing machines by punching, in combination with holding the cutter-bar during the operation, so that it cannot elongate in the direction of the heel of the bar, for the purposes herein set forth.

Also, the use of the combined pattern and supporting bar B, as shown and described, to aid in the operation of punching cutter-bars, substantially in the manner herein described.

Also, in combination with the pattern or supporting bar B, the bolt *d*, and stay clamps C, for holding the cutter-bar, substantially as herein set forth.

No. 45,880.—SAMUEL E. TOMPKINS, Newark, N. J.—*Harness Saddle-trees*.—January 10, 1865.—This invention relates to harness saddle-trees made of iron and provided with iron jockeys, and consists in doing away with nuts and other projections on the under side of the tree, and in having the bearings of the tree so constructed that they serve the double function of bearings and clamps.

*Claim.*—The two bearings A A, connected together by a thin strip or plate B, made of convex form at their under sides to correspond to the shape of the back of the animal, and having a corresponding concave surface at their upper sides, when said bearings thus formed and connected together are provided with nuts *a* at their upper surfaces to receive the turret screws *b*, and all used in connection with the metal jockeys E E, flaps C, and back-board F, substantially as herein set forth.

No. 45,881.—GEORGE VANDER HEYDEN, Troy, N. Y.—*Stove Grate*.—January 10, 1865.—In this invention a rectangular cast-iron grate is made to rest on a bed plate of the same shape and material in such a manner that it is susceptible of a horizontal reciprocal motion to free it from ashes, &c., and also of a rotary motion when it becomes desirable to dump the grate, or empty its contents; in order to attain these movements with more ease and convenience, a shaker handle of peculiar construction is provided. The grate is also lined with fire-brick, which is kept in place by a mortise and tenon joint.

*Claim.*—First, the bed plate B when constructed respectively at each end of said plate, with the direct bearings *a a* and reverse bearings *b b*, in the manner substantially as herein shown, for the purpose of supporting and operating stove grates, in the manner herein set forth.

Second, in combination with the bed plate B the fire grate C, when constructed substantially in the manner as herein described and shown, so that the said grate can be operated in combination with said bed plate, fully in the manner and for the purposes as herein specified.

No. 45,882.—NATHAN VARS, New Market, N. J.—*Side-hill Ploughs*.—January 10, 1865.—This invention consists in attaching a subsoil share to the rear of a side-hill plough; this share is attached to a reversible standard and admits of adjustment to either side of the plough-beam. The depth of the subsoil share is varied by a slot and set-screw in the standard.

*Claim.*—The employment or use in a side-hill plough of a subsoil share G, having its standard F attached to an adjustable or swinging arm G\*, arranged substantially as shown, to admit of the subsoil share being adjusted to either side of the plough-beam, to suit the position of the mouldboard C and share D, as set forth.

No. 45,883.—GEORGE W. WALKER, Boston, Mass.—*Stove Grate*.—January 10, 1865.—This invention consists of a rectangular grate, susceptible of a lateral reciprocating movement, and can also be dumped to clear out the ashes, being hinged at its rear part for that purpose. A shaker handle of peculiar construction is fitted to the front part, by which the grate is shaken; it also serves to hold the grate up in a horizontal position, and is withdrawn when it becomes necessary to dump the grate.

The last bar on each side of the grate is made so wide as to effectually prevent the cinders jamming the grate.

*Claim.*—A stove grate having capabilities both of horizontal reciprocation, and of vertical swinging movement, when the grate is hung at its rear side to allow these movements, substantially as set forth.

Also, in a grate so constructed, giving to each end bar of the grate such width and disposition that in its sliding movement under the stove lining, the capability of free movement of the grate is maintained, substantially as described.

No. 45,884.—SYLVENUS WALKER, Boston, Mass.—*Pen-holder*.—January 10, 1865; antedated September 11, 1863.—The pen-holder consists of a glass tube closed at one end and coated upon the inside with silver, so as to be a non-conductor of electricity, for the purpose of preventing that paralysis, nervousness, &c., which sometimes follows the use of steel pens with conducting handles.

*Claim*.—The hollow silvered glass pen-holder, sealed up and protected as and for the purposes set forth, as a new and highly ornamental manufacture.

No. 45,885.—SAMUEL JACOB WALLACE, Carthage, Ill.—*Grain Binder*.—January 10, 1865.—This invention relates to the manner of arranging the binding devices in connection with the movable arm which rakes or gathers the grain upon the platform into gavels, and to the means for imparting the necessary motions to said devices.

*Claim*.—First, the arm Z of wheel O, sliding over slot of wire holder Y, substantially as and for the purpose specified.

Second, the binder G in combination with a movable arm F, or other equivalent movable part, so that the binder may be made travelling in relation to platform A, substantially as and for the purpose specified.

Third, the combination of the rack K and twister I, substantially as and for the purpose specified.

Fourth, the rack K, arranged on frame Q, substantially as and for the purpose set forth.

Fifth, the compressor shoe V, arranged on frame Q, substantially as and for the purpose specified.

Sixth, the slotted wire holder Y, bent or recurved, substantially as and for the purpose specified.

No. 45,886.—HERVEY WATERS, Northbridge, Mass.—*Machine for Rolling Metals*.—January 10, 1865.—The weight of the journal boxes of the upper roller is in this machine sustained by two bolts, one to each, which are tapped into the journal boxes and ascend upward through the hollow adjusting screws, resting upon the upper end of the latter by virtue of a large square section or collar, and susceptible thereby of being turned by means of a wrench. From the upper surface of each of these square collars is projected a pin, and a bar with two holes in one side of it at the proper distance apart and corresponding in size to the pins rests upon said collars, and by means of the connections formed with it by the pins, prevents the standards in which the journals are placed from spreading apart; while from each end of the bar is suspended a stirrup which supports the roller by the two necks thereof.

*Claim*.—The arrangement of a single yoke with its appurtenances and connections, substantially as and for the purposes specified.

No. 45,887.—THEOS. WEAVER, Harrisburg, Penn.—*Adjustable Chair*.—January 10, 1865.—This invention consists of a stationary post or back, to which is hung the back and arms of the chair, and so arranged that the seat may be adjusted and the whole folded in a small compass.

*Claim*.—First, the construction of the arm frame C C F F', and its combination with the haunch U, or with the haunch X and its collar K and pin, when so constructed as to enclose the back A and seat B, substantially as and for the purposes herein described.

Second, the combination and arrangement of the back A, which is provided with the arm rests D D, the tenons S S, the ratchets H, hooks and staples O O', with the seat B, which is provided with the arm rests E E, the tenons bearing on R, the ratchets J, when operated by the haunch U or X, substantially in the manner as and for the purposes herein shown and described.

No. 45,888.—R. B. WILLIS, Rochester, N. Y.—*Thill Attachment*.—January 10, 1865.—This invention consists in providing the head of the thill iron with a recess opening into the hole through which the bolt passes, into which recess is placed a friction plate or key, which can be kept pressing the bolt by means of a set screw passing through the head of said iron: the object is to avoid the rattling of the thills.

The prominent feature of this invention is the location of the set screw operating against the front instead of the rear end of the thill iron.

*Claim*.—The combination and relative arrangement of the set screw *s*, frictional plate *a*, and the thill iron B, with the bolt *b* and jaws D of the clip, the parts being constructed as and for the purposes shown and described.

No. 45,889.—J. F. WILSON, Boston, Mass., and JAMES C. BARTLETT, Charlestown, Mass.—*Mode of Operating Switches*.—January 10, 1865.—This invention relates to a means for operating the switch rail of turn-outs in horse railroad tracks; the object being to dispense with the ordinary extra manual power required to adjust the switch rail by operating the same directly from the car.

*Claim*.—The employment of a shipping wedge connected with and operated at will from the car, and so as to enter between the switch and main rails of a track, substantially as set forth.

Also, the arrangement of the shipping wedges for moving the rail in opposite directions, as shown and described.

45,890.—DANIEL WOODBURY, Rochester, N. Y.—*Derrick and Horse Power*.—January 10, 1865.—This invention consists in the application to any portable horse power of side braces, for the purpose of relieving the wheels from lateral strains, and in the employment of angle irons to the angles of the frame under the driving shaft, which cause the frame to preserve its proper shape under any strain; also, in the application to the driving shaft of a windlass and vertical jack frame, having a pivoted head to which may be attached the arm of a derrick, thereby constituting a portable horse power and revolving derrick.

*Claim*.—First, the employment of side braces J, they being constructed, arranged and applied to mounted powers, substantially in the manner shown and described and for the purpose set forth.

Second, the peculiarly constructed stake iron P, in combination with the double brace bars J, for the purpose of holding the stake when driven more securely in position.

Third, attaching the inner end of the sweep brace I to the bracket R, or to the rim of the wheel W, as and for the purpose shown and described.

Fourth, the combination and arrangement of the angle iron D with the joint plate E and the frame A of this class of horse powers, as shown and described and for the purpose specified.

Fifth, fitting the box *v* between the jaws or wings *w* of the joint plate E, so as to have but a line of bearing vertically between the parts, as and for the purpose specified.

Sixth, the combination and arrangement of the rope spool or windlass, and the jack G, constructed as shown and described, with the mounted powers, as and for the purposes herein set forth.

No. 45,891.—A. R. BURDICK, assignor to himself and J. D. FOSTER, Racine, Wis.—*Stake-holder for Railroad Cars*.—January 10, 1865.—The object of this invention is to obtain a stake-holder for sideless freight cars, which will allow its stake to be turned down in a horizontal position when required, so as to obviate the necessity of removing the stake from the car in loading.

*Claim*.—The box A, provided with the flange *d*, having a notch or recess *e* and two projections *ff*, one or both in combination with the collar C, provided with the flange *g*, internal elliptical opening and the projection *h*, all arranged substantially as and for the purpose herein set forth.

No. 45,892.—JOHN FOWLER, jr., Cornhill, England, assignor to W. P. TATHAM, Philadelphia, Penn.—*Cultivating Land by Steam*.—January 10, 1865.—This invention consists in placing two engines at opposite head-lands, and by means of suitable gears, to which an endless rope is attached, and to which the ploughs are also attached, the ploughs are drawn alternately across the field.

*Claim*.—The combination herein described, whereby the power of two engines, situated on distant headlands, is simultaneously employed in giving motion to an agricultural implement by an endless rope, in manner substantially as described, to haul the agricultural implement alternately to and from each headland, as herein explained.

No. 45,893.—GEORGE J. HILL, Buffalo, N. Y., assignor to H. G. LEISENRING, Philadelphia, Penn.—*Hand Stamp*.—January 10, 1865.—This invention consists of a stamp inked by a ribbon, passing from one roller to another, and the claim is for a yoke which holds the die and type, and an elastic ring to support the bed.

*Claim*.—First, the yoke F, constructed and arranged in respect to plates E and G, substantially as specified.

Second, the bed, composed of the soft rubber ring I, metal plate J, and plate L, of harder rubber, leather, or other equivalent material, the whole being confined in a recess in a base plate B and arranged beneath the stamp, as described, for the purpose specified.

No. 45,894.—T. O. WASHBURN, assignor to himself and JOHN C. SCOTT, Millville, Mass.—*Calipers*.—January 10, 1865.—This invention consists in attaching to the calipers a slotted arc, graduated, one end being firmly fixed to one of the legs, the other furnished with a slot which plays over a pin in the other leg, and affixing at the axis of motion an index reaching down to the graduated portion of the slotted arc. As the calipers are opened and closed the index moves over the graduated arc and indicates the measurements.

*Claim*.—The index C and graduated plate D, when arranged and applied to the calipers, substantially as and for the purpose specified.

No. 45,895.—P. J. BORIS, Halifax, Nova Scotia.—*Revolving Grate*.—January 10, 1865.—This invention consists in a grate attached to a back plate revolving in a chimney between two apartments, so that it can be adjusted in either; the two dampers in the flue, one on either side of the grate, are so acted on by an eccentric on the prolonged axis of the plate that the one over the grate is opened while the other is closed.

*Claim*.—The revolving grate D, arranged in the lower part of the flue or chimney A, in combination with the eccentric F, placed on the axis or shaft C of the plate B, and arranged relatively with the dampers E E, to operate automatically by the turning of the plate B and grate D, substantially as described and represented.

No. 45,896.—WILLIAM D. GRIMSHAW, Birmingham, England.—*Automatic Hammer*.—January 10, 1865.—This invention consists in providing a reservoir for air, which is within the framework of the hammer, and between the pump and the slide valve which admits it (the air) to the cylinder. The novelty further consists in providing and arranging two friction wheels in such a way that the valve is made to admit more or less air to the cylinder, according to the force required and the duty to be performed; the wheels are arranged one on the main shaft and movable longitudinally thereon, so that it may be placed near to the centre, or at any point between them and the periphery of the other wheel, which is placed on a vertical shaft, and to which the valve rod is attached. If the first-named wheel is near the centre of the last named little motion is imparted, and a light blow of the hammer is the consequence; but if it is carried nearer to the periphery the hammer is slower in its motion and a more forcible blow is given.

*Claim*.—First, the system of employing a reservoir between the pump or pumps and the hammer cylinder for holding the compressed air, the reservoir to be formed in the framework of the machine.

Second. The combination of the adjustable but otherwise stationary valve *d' d'*, the slide valve *k*, the cylinder *f*, the piston *g*, the piston rod *h*, and the hammer *i*, substantially as set forth.

Third, the combination of the valve rod *w*, the friction wheel *g*, the sliding friction wheel *b'*, and the shaft *d*, substantially as and to the effect herein above set forth.

Fourth, the combination of the reservoir *b*, the pump *o*, and the stop-cock *t*, as described.

Fifth, the arrangement described, of the pump *o*, reservoir *b*, friction wheels *b'* and *g*, valve rod *w*, valve *k*, cylinder *f*, and piston *g*, by which they are made to operate in relation to each other, substantially as set forth.

No. 45,897.—THOMAS SHORT, Fairmont, Ill.—*Gang Plough*.—January 10, 1865.—This invention consists in a rectangular frame, mounted on two wheels, with a crank shaft secured to the front end, and to which the plough frame is attached; it is raised and lowered by means of a lever, thus enabling the driver to give the ploughs a vertical movement: a lateral movement is communicated by a standard or handle rising from the plough frame.

*Claim*.—The arrangement of the double crank-shaped connecting rod *G*, devices *e e*, links *a' a'*, beam *E*, lever *H*, and post *I*, the whole being employed for joint operation, in the manner and for the purpose specified.

No. 45,898.—HIRAM BERDAN, assignor to LEVI P. MORTEN, trustee of HIRAM BERDAN, ABIA A. SELOVER and WILLIAM B. BENSON, New York, N. Y.—*Rifling Breech-loading Fire-arms*.—January 10, 1865.—In this invention the novel feature consists in continuing the rifling behind the barrel proper, or through the counter bore on its rear, by means of which, having suitable fixed ammunition prepared, the projectiles will exactly fit the bore through which they are to pass with but little friction, and receive a motion of rotation according to the twist.

*Claim*.—The rifling or grooving of the counter bore of breech-loading fire-arms, substantially as and for the purposes herein shown and described.

No. 45,899.—HIRAM BERDAN, assignor to LEVI P. MORTEN, trustee of HIRAM BERDAN, ABIA A. SELOVER and WILLIAM B. BENSON, New York, N. Y.—*Breech-loading Fire-arm*.—January 10, 1865.—In this invention a hinged gate opening laterally serves as a breech block, against which the cartridge case abuts. It has a forward projecting lip to cover the front joint, and a projecting tail at the rear to cover the channel through which the cartridge is passed, securely keeping out the moisture. A ring extractor underneath is used to eject the cartridge shell.

*Claim*.—First, the projecting plate *E*, swinging in a plane transverse to the barrel, in combination with the ring *G*, substantially as and for the purposes set forth.

Second, the protecting cover *I* and protecting plate *E*, in combination with the latch *D*, as herein specified.

No. 45,900.—Cancelled.

No. 45,901.—HIRAM BERDAN, assignor to LEVI P. MORTEN, trustee of HIRAM BERDAN, ABIA A. SELOVER and WILLIAM B. BENSON, New York, N. Y.—*Attaching Bayonets to Fire-arms*.—January 10, 1865.—In this invention the shank of the bayonet is shorter than usual, and the holding stud, or end of the barrel, so located as to bring the blade directly over the ramrod, which is pushed up under the blade or shank, and thus the locking clasp or ring is better secured from disturbance.

*Claim*.—Placing the bayonet blade and shank upon the under side of the barrel, in combination with the ramrod, substantially as and for the purpose herein shown and described.

No. 45,902.—DAVID AHL, M. D., Newville, Penn.—*Method of Preventing Oil Barrels from Leaking*.—January 17, 1865.—This invention consists in saturating or coating the staves, or the barrels, with a composition made by combining shellac or other water-proof gum or resin with asphalt, coal tar, or other similar matter.

*Claim*.—The composition, as herein specified, for the purposes herein substantially set forth.

No. 45,903.—D. L. and J. M. BARLOW, Cohoctah, Mich.—*Harrow and Seeder*.—January 17, 1865.—This harrow may be attached to any wheeled carriage used in farming operations. By means of a pitman attached to an eccentric the harrow receives a reciprocating motion as it advances, which motion is regulated by a slotted platform, through which the harrow plays. By means of both its progressive and its lateral motion the harrow is enabled to pulverize the soil more completely than it could with only the former.

*Claim*.—First, the harrow *n*, constructed and operated substantially as herein described.

Second, the harrow *n*, in combination with the seeder B, the whole constructed and operated substantially as and for the purpose herein set forth.

No. 45,904 — WILLIAM BELBIN, Baltimore, Md.—*Oyster Dredges*.—January 17, 1865.—The front rods which support the rake or bar have an elbow or curvature at their lower end to serve as a shield, preventing the teeth from engaging in the side of the vessel or roller.

*Claim*.—The combination, in an oyster dredger, of the rake bar A, front rods C, and rear rods D, with the head E and swivelling link F when the rods C are curved, constructed and arranged as and for the purposes described.

No. 45,905.—J. W. BOPE, St. Louis, Mo.—*Harvester*.—January 17, 1865.—This invention consists in hinging the grain platform at its rear edge to adjustable arms, secured to the finger bar or to a rigid table connected therewith, the arrangement being such that the platform may be shortened or lengthened to suit the length of straw upon which the machine is operating: by raising the front of the platform, the completed gavel thereon is caused to slide off upon the ground, while at the same time the front edge of the platform acts as a cut-off to arrest the fall of the accumulating grain, until the gavel is discharged from the platform, when the platform drops, and the grain held up by its front edge falls thereon.

*Claim*.—The adjustable sliding platform or dropper hinged at or near its rear edge, as described, so that by the raising of the front edge it performs the two-fold function of the dropping gavel, and at the same time operating as a perfect cut-off to arrest the falling grain.

No. 45,906.—J. W. BOPE, St. Louis, Mo.—*Harvester*.—January 17, 1865.—This invention relates to the manner of discharging the grain from the platform upon which it falls as it is cut, and it consists in pivoting said platform, at or slightly in rear of its centre, to arms rigidly connected to and extending back from the finger bar, the platform being so pivoted to said arms as to vibrate about a fixed point thereon, and, by simply raising the forward edge, to slide the grain off upon the ground, said forward edge acting at the same time as a cut-off to arrest the accumulating grain and keep it separate from that which is being discharged.

It further consists in a specific arrangement of lever and cord for operating said platform, and in the arrangement in connection with the platform, of a shield to guard against obstructing matter, as straws, &c., getting under the platform when its forward edge is elevated, and preventing its operation.

*Claim*.—First, hinging the grain platform, which is arranged directly behind the cutting apparatus, at or near its centre, substantially as described, so that it will vibrate upon a fixed point, and by the elevation of its front edge perform the double function of discharging the completed gavel, and simultaneously therewith arresting upon its front edge the fall of the accumulating grain, as described.

Second, operating the tilting platform A by means of the lever D, with the chain or cord C, in the manner as and for the purposes herein described.

Third, the adjustable shield or guard E, arranged and operating in connection with the grain platform, as herein described, for the purposes set forth.

No. 45,907.—W. B. BURNETT, New York, N. Y., and JAMES P. MCINTOSH, Brooklyn, N. Y.—*Whitewash Brush*.—January 17, 1865.—This invention consists in connecting the handle with the brush-block, and is so arranged that the handle can be placed at any desired angle, by means of a ferrule and screw on the handle, and a slotted clamp on the brush.

*Claim*.—First, a brush-block in combination with a slotted way E, substantially as described.

Second, a slotted way E, in combination with a ferrule C, substantially as described.

Third, a brush with its handle applied thereto, when the several parts are constructed and operated substantially as described.

No. 45,908.—JOHN CHILCOTT, Brooklyn, N. Y.—*Gas or other Retorts*.—January 17, 1865.—This invention consists in surrounding the bottom, sides, and top of a gas or other retort with a jacket or casing C, between which and the retort a continuous system of flues is formed by longitudinal partitions, having openings at opposite ends alternately.

*Claim*.—First, surrounding the bottom, sides, and top of a gas or other retort with a jacket or casing C, between which and the retort a continuous system of flues E E is formed by means of longitudinal partitions, having openings at opposite ends alternately, whereby the flame is caused to circulate back and forth several times along, and once all around, the retort, substantially as and for the purpose herein specified.

Second, the jacket or casing C, divided longitudinally into two parts, and having the flue partitions attached to its interior, so as to be detachable from the retort, substantially as and for the purpose herein specified.

No. 45,909.—G. F. J. COLBURN, Newark, N. J.—*Comb*.—January 17, 1865.—This invention consists in cutting, carving upon, or otherwise affixing to a pocket-comb a graduated scale, so as to serve as measured rule.

*Claim*.—A comb having graduations, or a rule arranged therewith, substantially as described.

No. 45,910.—GUY DAVIS, Syracuse, N. Y.—*Osculating Valve*.—January 17, 1865.—This invention consists in arranging with a conical suspended valve a series of openings for the induction and eduction of steam to and from the engine, in such a manner as to relieve it of a large proportion of its friction; the steam being admitted to the centre of the valve, which is made hollow for that purpose.

*Claim*.—The conical suspended valve I, with its openings J J communicating with the steam chest, and the induction openings K K, and eduction opening T communicating with the cylinder, substantially as described.

No. 45,911.—JOHN H. DICKERSON, Cincinnati, Ohio.—*Portable Forge*.—January 17, 1865.—This invention consists in an arrangement of devices, whereby the separate parts required to constitute a blacksmith's forge can be taken apart, folded up, or packed one within another, so as to occupy as little space, and be rendered as convenient for transportation, as possible.

*Claim*.—First, the combination of the pan A', hinged plate Y, bolts W W, and catch X, constructed and employed as herein specified, to constitute a forge bed and screen while in use, and a close and secure tool box in travelling.

Second, the hinged frame G and brace rods L L, employed to support the bellows while in use, and adapted to be compactly folded for transportation.

Third, the combination of the pan A', screen Y, bellows E C, stand G, lever J, and braces L, all constructed and arranged substantially as and for the purposes set forth.

No. 45,912.—WILLIAM C. DODGE, Washington, D. C.—*Cartridge Retractor for Many-chambered Fire-arms*.—January 17, 1865.—A disk attached to a central spring rod or stem is notched or recessed at its edge in conformity with the chambers of a fire-arm, (whether of a revolving cylinder, or of multiple stationary barrels,) so as to fit under the flanges of the metallic cartridges, whereby all the cartridge cases may be withdrawn simultaneously on the proper movement of the central stem. The spring restores the retractor to its closed position for receiving the cartridges.

*Claim*.—First, the ejection, simultaneously, of two or more cartridge cases from a many-chambered fire-arm, in the manner and by the means substantially as herein set forth, whether the chambers be stationary or revolving, and whether loaded at the front or rear.

Second, the retractor a, provided with the stem b and spring c, or their equivalents, in combination with the cylinder or barrels of a many-chambered fire-arm.

Third, providing the retractor a with a stem, which is made to extend through the cylinder or barrels, and project at either the front or rear end thereof, for the purpose of being operated as shown and described.

No. 45,913.—JOHN DU BOIS, Williamsport, Penn.—*Revolving Flood Gate*.—January 17, 1865.—This invention relates to a mode of constructing flood gates, which constitute a part of the dam when closed, and which are used for making what are known as artificial or splash floods, (when the streams are too low to be navigated,) without accumulating a large body of water, and for letting it off in sufficient quantity at pleasure, for the purpose of floating logs, rafts, boats, &c.

*Claim*.—First, a centrally balanced revolving flood gate, constructed and operating substantially as herein described.

Second, supporting the gate C in its bearings in such manner that it shall be allowed to rise bodily in the act of opening to allow the water to escape, and using the arms c c, or equivalent means, for holding the gate down and preventing it from turning, substantially as described.

Third, the abutment b on the floor of the chute, when used in conjunction with a revolving flood gate, operating substantially as described.

Fourth, a revolving flood gate, which is so arranged and constructed that it will be opened by the water in the basin rising above a certain determined level, substantially as described.

No. 45,914.—DAVIS EMBREE, Dayton, Ohio.—*Method of Removing Incrustation from Boilers*.—January 17, 1865.—This invention consists in the use of still slop and of quicklime in removing incrustation from boilers.

*Claim*.—The use of still slops to prevent or remove incrustation by lime in steam boilers, and the use of quicklime, in the manner herein substantially set forth, to prevent such incrustation.

No. 45,915.—**WILLIAM ELMER**, New York, N. Y.—*Manufacture of Illuminating Gas*.—Patented in France December 5, 1864.—January 17, 1865.—This invention consists in first distilling the gas stock at a temperature below that at which permanent gas is produced, and then passing the products of distillation through another retort, heated to a high temperature, and containing zinc or other material capable of elevating and fixing the oxygen in the vapor contained in water, or other products from the first retort. Steam or superheated steam may also be added in either retort.

*Claim*.—The process of manufacturing gas by distilling the gas stock in one retort and converting the volatile product of the distillation and illuminating gas in another retort in the presence of a material which, when at a high temperature, will absorb and fix the oxygen contained in the volatile product of the distillation, the process being conducted substantially as set forth.

Also, the process of manufacturing illuminating gas by distilling the gas stock in one retort, and converting the volatile product of the distillation into illuminating gas in another retort, in the presence of an additional quantity of steam to that obtained from the gas stock, and of a material which will absorb and fix the oxygen contained in the volatile product of the distillation and in the additional steam, the process being conducted substantially as set forth.

No. 45,916.—**FREDERICK FICKEY, jr.**, Baltimore, Md.—*Smoking Pipe*.—January 17, 1865.—This invention consists in fixing to the bottom of a pipe bowl a cup of copper or any suitable material, with a hole in the bottom for the smoke to pass through. The device is so arranged as to protect the bottom of the bowl from the effects of combustion, and at the same time to avoid destroying the absorbent properties of the material of which the bowl is composed.

*Claim*.—The use of the metallic cup B, in combination with the absorbent bowl of a tobacco pipe, substantially in the manner and for the purpose set forth.

No. 45,917.—**JOHN S. FISK**, Meadville, Penn., and **JAMES WESTERMAN**, Sharon, Penn.—*Coal-mining Machine*.—January 17, 1865.—The object of this invention is to substitute machinery for hand labor in mining, with particular reference to economy of material, by sinking thin single-line cuttings in lines perpendicular to the axis of the cutter shaft, and to this end this invention consists in so mounting a circular saw or saws upon an arbor or shaft that it or they may rotate in a horizontal plane at the lower end of the arbor or on any desired part of its length, and in combining the arbor and its saws with gearing to give it both a rotating and a feeding motion, when the latter can be made constant or intermittent at the pleasure of the operator.

*Claim*.—The combination in a coal-mining engine of one or more circular saws on a single mandrel with an adjustable feeding mechanism arranged on a movable truck, substantially in the manner described and for the purpose set forth.

No. 45,918.—**JOHN S. FISK**, Meadville, Penn., and **JAMES WESTERMAN**, Sharon, Penn.—*Mode of Ventilating Mines*.—January 17, 1865.—This invention consists, first, in combining one or more reservoirs for compressed air, located within a mine, with a force pump or engine located at or near the mouth of a mine, so as to exert a uniform pressure at the working point, where compressed air is used as a motor, and to prevent the stoppage of the ventilation in case of a temporary stoppage of the engine.

Second, in the employment of one or more reservoirs for compressed air, located within the mine, into which air is pumped through large tubes or pipes, and from which it is withdrawn through smaller eduction pipes for use as a motor, or for ventilation, or for both.

*Claim*.—First, the combination with a forcing pump or engine, located at or near the mouth of the mine, of one or more reservoirs for compressed air, located within the mine at a distance from the engine and near the working point, substantially in the manner herein described, for the purpose of ventilating the mine, and of exerting a uniform pressure as a motor, as set forth.

Second, the combination of one or more reservoirs, arranged substantially as herein described, with a large induction and small eduction pipe and stop-valves, as and for the purpose set forth.

No. 45,919.—**WALTER FITZGERALD**, Boston, Mass.—*Self-loading Fire-arm*.—January 17, 1865.—A lever, by one movement, brings the forward cartridge from the magazine partially into the proper position for firing. By another movement of the lever the cartridge is pressed home, and the next cartridge in the magazine is prevented from passing into the barrel. The piece having been discharged, by another movement of the lever the empty cartridge case is withdrawn from the barrel and ejected from the gun. The next movement of the lever brings the next cartridge partially into position, as before.

*Claim*.—First, the breech block D and guard lever E, so connected by the pins c d and slots b that the vibration of the lever E will give the breech block the required motions in its passage within the breech C, substantially in the manner and for the purposes specified.

Second, in combination with the breech block D the cartridge guide F and cartridge dis-

charger H, when constructed and arranged to operate together with a magazine, substantially as herein described and represented.

Third, the percussion rod G, constructed and operated substantially in the manner and for the purpose set forth.

Fourth, locking the magazine, substantially in the manner set forth.

No. 45,920.—DANIEL D. GITT, Arendtsville, Penn.—*Horse Rakes*.—January 17, 1865.—The object of this invention is to assist the operator in discharging the load, and to provide for the independent action of each tooth to such an extent that there is no danger of breaking the same. A rolling weight is placed upon the tilting bar in such a manner that when the rake is in working position the weight is back of the rake head, but upon tilting the same it will roll forward, displacing the centre of gravity and assisting the operator. The ball may be attached to the lever so as to swing backward and forward instead of rolling. The staple and spring are one, the staple being open to afford freedom of motion to the tooth.

*Claim*.—First, the employment, in combination with any part of the rake, which, for the purpose of discharging the rake, is moved or movable, of a weight, under the arrangement herein described, so that while the centre of gravity of the lifting apparatus is back of the fulcrum, it shall, on the rake being operated for discharge, be displaced and thrown forward in the manner herein described.

Second, combining with the teeth made of wire or other material, hinged to or hung upon a fulcrum bar, a spring staple, under the arrangement herein described, so as to bear with yielding pressure on the teeth.

No. 45,921.—SAMUEL B. HAINES, Lancaster, Penn.—*Horse Powers*.—January 17, 1865.—This invention consists in the use of horse powers with several radial arms or levers for attaching the horses. It is found that a sudden jerk from one or two horses gives a violent side strain, which is liable to break the machine, and especially to break or throw out of place the central pivot or shaft of the main wheel. The object of this invention is to remedy these difficulties by the use of yokes, pivoted upon the radial levers, and a large hollow conical pivot with a bed plate of peculiar construction.

*Claim*.—First, the vibrating yokes H, in combination with the levers D and the conical pivot L, substantially as set forth.

Second, the hollow conical pivot L, when cast in one piece with the head plate K, extending so as to fix the gearing at the circumference of the main wheel A, substantially as specified.

No. 45,922.—WILLIAM HALSTED, Trenton, N. J.—*Artificial Fuel*.—January 17, 1865.—This invention consists in taking blocks of bog turf, or peat of salt marsh, prepared by dipping them in tar, and combining with such blocks coal dust, &c., to form fuel.

*Claim*.—The combination and mixture of the ingredients in the manner and proportions above described.

No. 45,923.—J. M. HARSHBARGER, Brandonville, W. Va.—*Seed Sower*.—January 17, 1865.—In this invention the seed slide is in two sections, which may be disconnected at will, thus rendering half the machine in operation while passing trees or fences, and saving seed thereby.

*Claim*.—A seed slide, in two or more sections, adapted to be connected and disconnected by the employment of a link c, or its equivalent, substantially as and for the purpose herein described.

No. 45,924.—DANIEL HUTCHINSON, Fort Ancient, Ohio.—*Corn Sheller*.—January 17, 1865.—In this machine the corn descends vertically between two revolving disks or plates, one armed with teeth, and the other with ribs, to give the ear a rotary motion. The disks are carried by separate shafts that receive their motion from the same driving wheel. One side of the hopper is prolonged downwards, and forms a breast, against which the ears are held and rotated. The end of the shaft rests upon a spring which yields readily to the pressure of a very large ear.

*Claim*.—The disks C and D and the breast h, when combined and arranged relatively to each other, in the manner and for the purpose specified.

No. 45,925.—JOHN C. KENEDY, Logansport, Ind.—*Straw Cutter*.—January 17, 1865.—This invention consists in constructing the sash or sliding frame of a straw cutter so that it will slide in an inclined position, having attached to it one or more knives horizontally, thereby giving a drawing or a transverse cut; and also in providing one or more knives, which are placed in an inclined position, secured at the upper end by a bolt or rivet, and so arranged and constructed that the motion of the lever causes the inclined knife to work in a hinged manner, bringing the edges of the horizontal and inclined knives together.

*Claim*.—First, the described arrangement of the diamond or angular-shaped sliding sash or frame D D D, horizontal knives b B, when constructed and arranged substantially as described and for the purposes set forth.

Second, the inclined knives a A, when constructed and operated by the rod F and lever E, substantially as and for the purposes set forth in the specification.

No. 45,926.—WILLIAM A. L. KIRK, Hamilton, Ohio.—*Sod Cutter*.—January 17, 1865.—This invention consists in a combination of devices indicated in the claim; to understand which the drawings and specification must be referred to.

*Claim*.—First, the arrangement of frame A, rollers B and C, and rod-cutting blade E e e e', substantially as set forth.

Second, the parts A B C D D' e e' e'' F G K and L, as herein arranged and combined.

No. 45,927.—ROBERT LEVINGTON, Monroe, Mich.—*Bumper Spring*.—January 17, 1865.—This invention consists in attaching a protector to the bed of a car body to serve as a bumper, and also to protect the spring that is attached to the draught bar from any unnecessary strain when the cars are run together.

*Claim*.—The protector K, and the yoke J in combination therewith, as is clearly set forth and described

No. 45,928.—EDWARD F. MCFARLAND, Worcester, Mass.—*Forging Apparatus*.—January 17, 1865.—This invention consists essentially in suspending the hammer by means of a strong spiral spring, from a double-elbowed shaft arranged in the upper part of the hammer frame. One end of this shaft projects outside of the frame and is there bent in the form of a crank, and a rod depending from the handle of this crank serves as a means of vibrating the crank to which the spring is attached, and thus occasions a resiliency of the spring, and consequent rise and fall of the hammer.

*Claim*.—First, constructing the stem D' of a hammer D of a spring which is attached at its upper end to a crank shaft a, substantially as described.

Second, the combination of a hammer D, spring stem D', crank shaft a, and lever E, operating substantially as described.

Third, the use of shelves gg, adapted to support the hammer D when not in use, substantially as described.

Fourth, the application of a counter weight h, which is suspended by a spring k to a hammer, or its equivalent, which is also suspended by a spring stem, substantially as described.

No. 45,929.—ELIJAH MCKESSON, Phillips' Mills, Penn.—*Side-hill Ploughs*.—January 17, 1865.—This invention consists in a device for securely locking the corners of the mould-board to the land side, the land side and mouldboard being fastened into the grooves of the shoes, which form one straight line with the point of the plough.

*Claim*.—First, the double mouldboard having a triangular front, corners to lock in the groove of the land side, and a pointed projecting termination, constructed, arranged, and operating substantially as and for the purposes set forth.

Second, the combination of the shoes 1 and 2, with the mouldboard and land side and share, when constructed, arranged, and operating substantially as described.

No. 45,930.—JOHN MCKNIGHT, Philadelphia, Penn.—*Detachable Flat-top and Elevated Cooking Stove*.—January 17, 1865.—This invention consists in constructing a cooking stove in two parts, so that it can be converted readily into either a flat-top or elevated oven stove.

*Claim*.—First, so constructing a cooking stove in two sections that it can be converted from a flat-top stove to an elevated oven stove, or *vice versa*, substantially in the manner and for the purpose herein set forth.

Second, the hollow projection a', at the rear of the ash-pit and below the fire grate, the said projection communicating with the flue G, as and for the purpose specified.

Third, the detachable hollow casing H, forming a communication between the ash-pit B and flue G, as and for the purpose set forth.

No. 45,931.—GEORGE MEADER, Ottawa, Ill.—*Wrenches*.—January 17, 1865.—This device consists of a truncated circular plate having ratchet teeth upon the curved portion of its periphery and a straight bar attached to the straight portion. To the bar the two jaws are attached and caused to slide upon, to, or from each other, by a right and left screw. The slotted end of the handle embraces the disk on each side and turns upon a pivot which passes through its centre, and a spring pawl for holding the disk in any required position, and by which, consequently, the jaws may be projected in any direction within the limits of one hundred and eighty degrees, is attached to the handle in the usual manner.

*Claim*.—As a new article of manufacture the adjustable wrench, constructed and operated as herein described.

No. 45,932.—GEORGE MILLER, Washington, D. C.—*Carpenters' Gauge*.—January 17, 1865.—The object of this invention is to facilitate the operation of scribing skirting to stairs, and it consists in a gauge with a free sliding bar, to the extreme end of which is a point. Intermediate between this point and the head is a scribing tooth, which marks the line to which the board is cut after being slid on the board to be fitted, by running the point at the end upon the stair or upon the string board.

*Claim*.—A gauge constructed substantially as described and for the purpose specified.

No. 45,933.—GEORGE RODNEY MOORE, Lyons, Iowa.—*Fire Chamber Clearer*.—January 17, 1865.—This invention consists of a plate in the front part of the fire pot, attached to the edge of an oscillating grate, and so arranged that when the grate is moved by a draw rod, it prevents coals and ashes falling into the ash-pit in front, and throws them into the lower part of the grate.

*Claim*.—The attachment of the plate or clamp C, or its equivalent, to the grate E, substantially in the manner and for the purpose set forth.

No. 45,934.—ELLAS C. PATTERSON, Chicago, Ill.—*Cultivator*.—January 17, 1865.—In this invention the cultivator blades consist of one long one and three shorter ones arranged behind the first on a bed plate. The bed plate is attached to curved arms or levers, which are pivoted at their rear ends to the frame of the machine. The forward ends are provided with pins which work in slots of levers, pivoted above the axletree, and extending back to the driver's seat. By depressing the back end of the lever the blades are raised from the ground.

*Claim*.—First, the curved levers A, B, C, D, constructed and operating substantially as described.

Second, the combination of the curved and straight levers, constructed and operating substantially as described.

Third, the combination of the curved and straight levers with the ploughs, constructed and operating substantially as described.

Fourth, the peculiar form and arrangement of the middle rear ploughs, in connection and combination with the two outside rear ploughs, all constructed and operating substantially as described.

No. 45,935.—F. C. PAYNE, New York, N. Y.—*Artificial Fuel*.—January 17, 1865.—This invention consists of coal dust mixed with plaster of Paris and hydraulic lime, formed into lumps.

*Claim*.—First, a fuel composed of a conglomerate of coal screenings, or small particles of coal and hydraulic lime, substantially as herein described.

Second, the use of plaster of Paris with hydraulic lime, substantially as herein described, in cementing together coal screenings or small particles of coal, to render the latter serviceable as fuel.

No. 45,936.—DEWY PHILLIPS, Shaftsbury, Vt.—*Laths for Buildings*.—January 17, 1865.—This invention consists in a tongued and grooved lath, with undercut grooves in its surface, the same being designed to aid each other in resisting any disturbing force, and by their use a strong wall is produced and a great saving effected in the amount of mortar required. With brick walls this style of lathing makes the plastering very dry, and under all circumstances the non-conducting character of the wood makes the plastering warmer in winter and cooler in summer.

*Claim*.—Tongued and grooved laths, formed with grooves in their surfaces, receiving the mortar, substantially as specified.

No. 45,937.—ANSON H. PRATT, Yellow Springs, Ohio.—*Floor Covering*.—January 17, 1865.—This invention consists in pasting on floors several layers of paper, the last being printed in water colors and varnished; such as ordinary wall paper. When it is desirable to have the covering removable, the different thicknesses are pasted together to form a kind of pasteboard, which may be used as ordinary oil-cloth.

*Claim*.—The application and use of figured or ornamental paper, printed with water colors, to floors, as a substitute for oil-cloth and carpets, as herein described, whether stationary or movable.

No. 45,938.—WILLIAM PRICE, Cincinnati, Ohio.—*Mangle*.—January 17, 1865.—This invention consists in encasing the working parts of a mangle with a metallic case, the same forming the supports for a table or apron to the articles on a plane between the pressure rollers when open for use, and also to close up the mangle to keep all the working parts free from dust when not in use.

*Claim*.—Encasing the working parts of a mangle, the case being so constructed and hinged as to let down and form the support for guiding the articles in a line between the pressing rollers, and fold up and close together so as to protect the working parts when not in use, substantially as herein specified.

No. 45,939.—MARTIN RINEHART, Monroe, Mich.—*Car Coupling*.—January 17, 1865.—This invention consists in providing an apron or direction by which the coupling link is guided into the mouth of the draw-head, so that the coupling may be automatic.

*Claim*.—The combination of the sliding block A, apron B, with the hook C, and link d, substantially as described and for the purpose set forth.

No. 45,940.—GEORGE W. SAYRE, Pisgah, Ohio.—*Washing Machine*.—January 17, 1865.—This invention consists in the combination of a series of corrugated beaters, which are suspended and actuated by means of cranks and pitmen, and an adjustable weight.

**Claim.**—The combination of the adjustable oscillating frame K, provided with cranks, pitmen, pendants, and beaters, with the adjustable weight L, and scroll bottom B, arranged and operating in the manner and for the purpose substantially as described.

No. 45,941.—JOHN M. SPIEGLE, Philadelphia, Penn.—*Condenser*.—January 17, 1865.—This invention consists in the use, in connection with the air-pump, of a condensing steam engine of perforated tubes for introducing jets of air into the water, as it is forced by the air-pump towards the discharge valve, thereby converting the water into spray; the object being to prevent the injurious effects which a violently impelled, unbroken volume of water has on the valve. The device consists of a pipe through which the air is conveyed, which is inserted in the passages between the air-pump and the hot-well, and that portion of it which is within the passage is made in the form of a cross, and perforated with small holes for the egress of the air, that it may be mingled freely with the water as it passes towards the discharge valve.

**Claim.**—The use, in connection with the air-pump of a condensing steam engine, of the perforated tubes *d* and *e*, or their equivalents, for introducing jets or streams of air into the water as it passes from the air-pump to the hot-well, as set forth.

No. 45,942.—A. B. SPROUT, Hughesville, Penn.—*Horse Rake*.—January 17, 1865.—This invention relates to the construction and attachment of the teeth. The teeth are triangular in form, and so applied that a flat surface is presented to the hay in front, while the back of the tooth presents a salient edge. The upper end of the tooth terminates in a flattened coiled spring which surrounds a spool, provided with a notch or chamber which holds the tooth in place. This spool forms the upper part of a plate, which is securely fastened to the head by means of a clamp and screw.

**Claim.**—First, making a curved rake tooth of a triangular sectional shape, (or its equivalent, semi-elliptical or semicircular,) and so applied that the flat side shall be on the inner side of the curve to endure the tensional strain, while the rear salient edge shall act as a stiffener to the tooth.

Second, the combination of a tooth of a triangular sectional shape, (or its equivalent, semi-elliptical or semicircular,) and with a flat side on the inside of the curve of the tooth, with a coiled spring by which it is attached to the head, and by means of which its elasticity is increased.

Third, the plates C c, adapted to be secured in position by the screw *c'*, substantially and for the purpose specified.

Fourth, the spool C2 c2 c3, constructed and arranged substantially as described, and adapted for the attachment of the spring A, in the manner set forth.

No. 45,943.—MAURICE VERGNES, New York, N. Y.—*Piano-fortes*.—Antedated January 2, 1865.—This invention consists of a drum attachment to a piano-forte, of such a nature that it will automatically operate by simple clock-work arrangement, to be set free when required by a pedal.

**Claim.**—First, the application to a clavichord instrument of a mechanism to operate a hammer upon a drum, in the manner substantially as above described.

Second, the use of the slide H, and the curb straps to hold the hammer in the condition to produce the roll of the drum, in the manner substantially as above described.

No. 45,944.—OWEN G. WARREN, New York, N. Y.—*Apparatus for Amalgamating Metals*.—January 17, 1865.—This invention consists of a tub provided with a cock and stirrer. On the top of the tub is placed another tub with a perforated bottom. The ore is placed with water in the lower tub, and the mercury in the upper tub, from whence it falls through the perforated bottom in a shower into the ore. The amalgam is drawn off by means of a cock.

**Claim.**—First, pouring quicksilver down through a sieve or strainer into a mass of comminuted ores and water, which has been subjected to a cooking process to gather the ores contained, in the manner substantially as above described.

Second, obtaining the metals in their successive degrees of fineness by successive leaching with quicksilver poured down through a strainer into the ores and water, and successive gatherings of the amalgam formed, in the manner substantially as above described.

No. 45,945.—EDWARD WEISSENBORN, Hudson City, N. J.—*Oil Lamp*.—January 17, 1865.—The object of this invention is to lubricate moving mechanism with an unfailing certainty, and to graduate the quantity with a view to economy and efficiency, at the same time filter the oil, and thereby protect the journals and bearing of machinery from injury by reason of grit or other hard particles contained in the oil. Its novelty consists in the combination of a sponge, follower, screw, and nut, with the oil cup.

**Claim.**—The sponge C, the follower D, screw E, and movable winged nut F, applied in combination with each other, and with the oil cup, and operating substantially as herein specified.

No. 45,946.—JASON A. BIDWELL, assignor to himself, H. J. LITCHFIELD, DANIEL M. ROBERTSON, and ASAPH CHURCHILL, Boston, Mass.—*Screw-Nicking Machine*.—January 17, 1865.—This invention consists in a device for grasping the screw blank, and is composed of two jaws, sliding on an upright standard. The lever for operating them is attached to the lower jaw, the upper jaw resting thereon, and the two being clamped together by two side levers, the lower ends of which are attached to the ends of the lower jaw, and are moved therewith. In the upper ends of these levers are slots, cut at such an angle, and sliding over pins or studs in the upper end of the standard in such a manner as to throw said levers forward, when the jaws are raised to carry the screw in front of the saw, which motion causes a cam or incline thereon to press upon other studs, one in each end of the upper block or jaw, and between which and the lower jaw the screw blank is placed.

*Claim*.—First, the jaws E E, sliding blocks A A', and controlling spring K, when combined with each other, and with a circular saw P, substantially in the manner and for the purpose herein set forth.

Second, the arrangement and combination of the sliding blocks A A' with the upright B, slotted side levers O O, and operating lever M, or their equivalents, substantially in the manner and for the purpose herein set forth.

No. 45,947.—JOSEPH DE ROSTHORN, Vienna, Austria, assignor to CLEMENS HERSCHEL, Davenport, Iowa.—*Casting Molten Metal*.—January 17, 1865.—This invention consists in what is technically called the riser, by substituting for the same a heavy weight, to the bottom of which, and projecting downward therefrom, is attached a wooden plug or plunger, which breaking through the crust which forms on the surface of the molten mass, is forced down by the weight above, and compresses and condenses the metal in the mould.

*Claim*.—The improved method of operating to increase the density and strength of metallic castings, substantially as set forth.

No. 45,948.—LOOMIS G. MARSHALL, Mokena, Ill., assignor to himself and F. W. HUGHES, Pottsville, Penn.—*Grate*.—January 17, 1865.—This invention is designed as an improvement on Morse and Lewis's patent, and consists of a cone-shaped or pyramidal grate, opened at its bottom, intended to be placed in the centre of a fire-pot in a stove. The bars of these grates are inclined downwards from the centre to the outside, so as to prevent the fire-coal, sawdust, tan, &c., which it is intended to burn, from choking up the apertures in the grate.

*Claim*.—A conical or angular-shaped grate, formed of bars sloping from the inside to outside, as herein described and for the purposes set forth.

No. 45,949.—ROBERT MURRAY, Boston, Mass., assignor to himself and JAMES W. TUTTS, Medford, Mass.—*Faucet*.—January 17, 1865.—The valve shaft is in line with the horizontal induction pipe, which induction pipe has an enlargement near its outer end to form the valve case. Around the mouth of this narrow pipe is a recess for the feet or projecting parts of the valve shaft to move in, the intermediate spaces permitting the flow of the liquid into the valve chamber, the valve shaft narrowing to pass through a packed screw cap, which adjusts the enlarged interior part within its apartments. The eduction port is on the under part of the valve case, and the leather packed valve is held to this point or seat by a spring, having its opposite abutment within the described enlargement of the valve shaft. The movement of this valve is circumscribed by stops to a traverse sufficient to cover and uncover the eduction port.

*Claim*.—The improved faucet, having its valve shaft arranged in the prolongation of the axis of its induction tube and pivoted in or at the inner end thereof, and made with its inner journal so channelled as to enable a fluid to pass into and through it while passing from the induction tube into the valve case, the faucet being in other respects as specified.

No. 45,950.—WILLIAM PAINTER, Baltimore, Md., assignor to himself and CHARLES PAINTER, Owing's Mills, Md.—*Material for making Boxes*.—January 17, 1865.—This invention consists in saturating pasteboard with asphaltum, and using it as a substitute for tin, in making boxes, &c.

*Claim*.—As a new article of manufacture the asphaltic board, made substantially as described, for the manufacture of boxes, packages, and other articles.

No. 45,951.—FREDRIKA SCHENKL, Boston, Mass., administratrix of JOHN P. SCHENKL, deceased, assignor to self and EDWARD A. DANA, Brookline, Mass.—*Packing for Rifled Projectiles*.—January 17, 1865.—The embracing and packing sabot is made of papier-maché, as usual fitting the exterior and base of the projectile, but having a metallic band on its front end, and a cup, or shoe and band combined, to protect its base from the disrupting effects of the explosion of the charge.

*Claim*.—The combination of a papier-maché sabot, with a metallic ring at top, and a ring and disk of metal at the base to protect it, substantially in the manner described.

No. 45,952.—CHRISTOPHER M. SPENCER, assignor to SPENCER REPEATING RIFLE COMPANY, Boston, Mass.—*Self-loading Fire-arms*.—January 17, 1865.—This invention relates to the magazine for containing the cartridges, which consists of two metallic tubes, the one fitting within the other, the outer tube passing through the stock and opening at the butt, and serving to secure the said stock to the breech portion or receiver, within which tube the cartridges are placed, and the inner and removable tube (closed at its rear end, and containing the feeding spring and follower) passing over the cartridges, as it is pressed within the opening, within which it is secured by a "bayonet-joint" catch when wholly inserted.

*Claim*.—First, the compound magazine inserted in the stock of the piece, and consisting of two metallic tubes, constructed and operating substantially in the manner described.

Second, in a double tube magazine chamfering the inner side of the forward end of the inner tube F, in the manner and for the purpose described.

Third, the arrangement of the groove c, and catch h, for conjoint operation, as specified.

Fourth, the combination and arrangement of the cap G, arm H, recess d, and pin d', substantially in the manner described.

Fifth, the combination of the receiver B, tube D, nut E, and stock A, in the manner and for the purpose set forth.

No. 45,953.—JAMES CRUTCHETT, Stroud, England.—*Apparatus for Winding Thread from the Skein*.—Patented in England August 23, 1864.—A reel is constructed each of whose arms can be extended as desired, by slides, and all of them can be folded together by means of a central umbrella joint, to which they are radially hinged; the outer ends have each a pivoted curved piece for sustaining the skein. The thumb piece, in connection with a lower disk or flange on the central joint, serves to hold the arms extended for operation, and also by a change of its position to allow the release of the arms, when the same are to be folded up in a compact form. An ordinary winding apparatus is used in connection with the reel for winding the yarn upon spools or into balls.

*Claim*.—First, the combination of the sliding arms a a a a a a, figures 1 and 3, with the curved finger d, for adjusting the apparatus to the size of the skein, and the folding joint G, for folding the same into a convenient portable form as above described.

Second, the application of the thumb screw, figure 6, with the slots f f f f f f, and the projections g g g g g g, for the purpose and in the combination above described.

Third, the foregoing arrangement of the reel as illustrated in figures 1, 3, 4, 5, 6, in combination with the winding apparatus represented in figures 7 and 8, all for the purpose above described.

No. 45,954.—CHARLES EMMANUEL, Paris, France.—*Astronomical Instruments*.—January 17, 1865.—The general character of this invention will be evident from the claim. For a detailed description the specification must be referred to.

*Claim*.—The astronomical instrument herein described, in which a theodolite, an equatorial and an ecliptic instrument are combined, affording the means of ascertaining immediately the position of the heavenly bodies in relation to the horizon, equator, and the ecliptic, substantially in the manner herein set forth.

No. 45,955.—LOUIS EMILE CONSTANT MARTIN, London, England.—*Steam Boiler*.—Patented in England April 28, 1864.—This invention consists in the arrangement of two or more fires in which coal is burned, in combination with one or more refractory hearths, on which incandescent fuel is kept for the purpose of consuming the gases which have been evolved from the coal burned in the primary furnaces.

*Claim*.—The arrangement of one or more fires substantially in the combination described, to generate the usual products of combustion, with one or more auxiliary incandescent fires, arranged on one or more refractory hearths, substantially as described, through which these usual products are carried, and which, after being transformed into combustible gases, pass through one or more flues into one or more chambers of combustion, where these ultimate gases are ignited, and thus effect a large economy in fuel.

No. 45,956.—HALSEY H. BAKER, New Market, N. J.—*Fire Bank*.—January 17, 1865.—This invention consists of a device for regulating the combustion in stoves so as to preserve the fire alive at a small expenditure of fuel. It is composed of two semicircular plates of metal, hinged in the middle, and made to double up by the force of gravity alone so as to go into the stove door. In these plates are draught holes, closed by dampers; on top is a loop or staple in which to insert a poker to handle it by.

*Claim*.—First, a fire bank composed of a plate, or combination of plates, fitted to the fire-pot or fire-box of a stove, range, or furnace, to lie upon the fire, substantially as herein described.

Second, providing such a fire bank with one or more openings and valves or shutters, substantially as and for the purpose herein described.

Third, the construction of such a fire bank of two or more plates hinged together in such a manner as to fold substantially as herein described for the purpose of enabling it to pass through the door of a stove or furnace.

Fourth, providing such a fire bank with a hook or loop i, so applied in combination with a hinge or hinges that it will fold by gravitation when suspended by said hook or loop, substantially as and for the purpose herein set forth.

No. 45,957.—W. B. BILLINGS, New York, N. Y.—*Coal-oil Stove*.—January 17, 1865.—This invention consists in the combination of the coal-oil lamp, for which a patent was granted to the said Billings in October, 1864, with a cooking stove or range. The lamp is set under the stove. The wick tubes pass up through an air-chamber formed between two diaphragms into cones or deflectors in the top diaphragm, which is the bottom of the stove. The under diaphragm or the sides of the chamber may be finely perforated, or the air-chamber may be filled with some non-conducting substance through which sufficient apertures admit necessary circulation.

*Claim*.—First, the use and adaptation of the body or sides of the stove or range D, to serve as and perform the office of a flue or chimney over the lamp or oil-holder A, substantially as described and for the purposes set forth.

Second, the attaching of one or more air guides, cones, or deflectors in the diaphragm C, and the adjustment of the same in the stove or range F, substantially as described and for the purposes set forth.

Third, the arrangement of the diaphragms C and g g, thus forming an air-chamber between the oil-holder and stove or range, substantially as described and for the purposes set forth.

Fourth, a non-conductor of heat used as packing between the stove and the oil-holder, arranged substantially as described and set forth.

Fifth, the insulation of the lamp or oil-holder by non-contact with the heater, stove, or range, substantially as described and set forth.

No. 45,958.—JOSEPH C. BIRD, Rising Sun, Md.—*Safety Brakes for Horse-powers*.—January 17, 1865.—This invention consists of a stop or catch, above which the lever which holds up the brake cannot be elevated, so that the brake cannot be applied in any other way than by the parting or flying off of the belt, entirely obviating the liability of the jarring of the machine, throwing upwards or outwards the lever or trigger, and thus letting down the brake upon the driving wheel.

*Claim*.—In combination with the trigger or lever D, the stop or catch which prevents it from rising beyond a given point, which would otherwise apply the brake without the parting or flying off of the belt, substantially as herein described.

No. 45,959.—T. G. CROSBY, Buffalo, N. Y., assignor to BUSHNELL STRONG and MAJORIE H. CROSBY.—*Rudder*.—January 17, 1865.—This rudder is formed with concave sides, the hollow part of which is vertical, extending through the blade.

*Claim*.—Constructing a rudder for vessels with concave sides, as herein substantially set forth.

No. 45,960.—THOMAS HOPKINS, Cincinnati, Ohio.—*Apparatus for Rendering Lard*.—January 17, 1865.—This invention consists in providing the caldron of a rendering apparatus with a colander, in which the fat is placed, so that it can be lifted bodily out when sufficiently cooked, and also in providing the caldron with a dipper having a valve, so that it can be readily emptied when lifted out of the caldron. To enable the dipper to be removed with facility, a crane is provided, which is supported by the base, which may be moved along a bar, the top of the crane being held in position by means of a block and notches. There is also attached to the apparatus a grapple, composed of a perforated plate, fingers, and hooks, to facilitate the handling of barrels, &c.

*Claim*.—First, the colander C c c', formed and adapted to operate as set forth.

Second, the dipper D D', d d', d'', formed and adapted to operate as set forth.

Third, in the described combination, the devices F' G' G'', g, H K, and L', or their equivalents, for enabling a crane to be shifted from place to place.

Fourth, the grapple T U U', v, V, w, W X Y Z Z', formed and operating substantially as set forth.

No. 45,961.—G. A. LEIBIG and E. K. COOPER, Baltimore, Md.—*Manufacturing Fertilizing Phosphates*.—January 17, 1865.—This invention consists in heating or roasting the native phosphate of iron or alumina with lime, caustic soda, carbonate of soda, or sulphate of soda or equivalent salt, so as to produce a soluble phosphate.

*Claim*.—The process, substantially as described above, for producing a fertilizing phosphate containing soluble phosphates.

No. 45,962.—CHARLES ABEL, New York, N. Y.—*Hoisting Machines*.—January 24, 1865.—This invention consists in the application of screw gearing in the construction of a hoisting machine, in such manner as to cause the threads of a screw to act as a stop or check to a windlass wheel, and thus to readily transform velocity into power, and cause the load to be securely held at every point of its elevation.

*Claim*.—The construction and use of the worm wheel D, with its connected wheel E and worm screw C, in combination with the pulley A, substantially as and for the purpose described.

No. 45,963.—EDWARD ANDREWS, Palo Alto, Penn.—*Shutter Bolts*.—January 24, 1865.—This invention consists in passing over the bolt a sliding yoke or stirrup, which, by means of a spring, catches into a notch in and holds the bolt when it is thrown back. This stirrup is fastened at its under end to a lever secured at the back of the bolt, and projecting a short distance beyond the rebate on the shutter. When the opposite shutter closes against this lever it compresses the spring, throws the yoke out of the notch, and releases the bolt, which, by means of the spiral spring in its rear, shoots forward and secures the shutter.

*Claim*.—The combination and arrangement of the bolt B, the latch D, lever F, and spring E and J, when used for the purpose herein fully described.

No. 45,964.—PHINEAS BALL, Worcester, Mass.—*Tapping Water Pipe*.—January 24, 1865.—This invention consists in a clamp formed of two half rings, with lugs at the ends of each half for securing them together. One of the rings is furnished with a radial socket projecting from its periphery, into which, when the ring is applied to the pipe, with packing between, a straight joint cock is inserted, through which a drill can operate to bore the pipe, after which operation the drill is withdrawn, and the branch pipe inserted in said cock, or attached thereto.

*Claim*.—First, the combination of the clamping irons H H' with the pipe A, tap holder D, and tap C, substantially as and for the purpose described.

Second, the combination of the clamping iron H with tap holder D and tap C, substantially as and for the purposes described.

Third, the combination of the packing I with the pipe A, tap holder D, and tap C, substantially as and for the purposes described.

No. 45,965.—STEPHEN T. BISHOP and ANDREW STEVELY, Fond du Lac, Wis.—*Horse-power Elevator and Excavator*.—January 24, 1865.—This invention consists, first, in combining a tread horse-power with an endless chain excavator and elevator; second, in a peculiar construction and arrangement of horse-power excavator and elevator, all embraced in a single machine for grading railroads, and for other purposes.

*Claim*.—First, the combination of a tread horse-power with an endless chain excavator and elevator, substantially as set forth.

Second, the adjustable frame E, or its equivalent, in combination with the tread horse-power frame, substantially as specified.

Third, the machine constructed and arranged substantially as described.

No. 45,966.—STEPHEN T. BISHOP and ANDREW STEVELY, Fond du Lac, Wis.—*Horse-power Elevator and Excavator*.—January 24, 1865.—This invention consists, first, in so constructing and arranging a horse-power elevator and excavator as to render the machine movable, and a horse upon the same; and, second, in a peculiar arrangement of gear wheels in connection with travelling or ground wheels, for moving said machine with a horse-power upon it.

*Claim*.—First, so constructing and arranging a horse-power elevator and excavator as to render the machine movable with the horse upon the same, substantially in the manner and for the purposes set forth.

Second, the above described arrangement of the wheels U and V in combination with the two sets of wheels R and S, substantially as specified.

No. 45,967.—STEPHEN T. BISHOP and ANDREW STEVELY, Fond du Lac, Wis.—*Horse-power Elevator and Excavator*.—January 24, 1865.—This invention consists in certain peculiar arrangements of hooks and buckets upon an endless chain for use in excavating and elevating earth in grading railroads, &c.

*Claim*.—First, the combination of the hook L with the bars I and the endless chain, substantially as described.

Second, the use of the bar I for attaching the hooks or buckets, or both, to the endless chain, substantially as described.

Third, the arrangement of hooks upon one part of the bar I, and at the same time putting a bucket or buckets upon the other part or end of the bar, substantially as described.

Fourth, the arrangement of the hooks and buckets alternately upon successive bars I, substantially in the manner and for the purpose set forth.

No. 45,968.—STEPHEN T. BISHOP and ANDREW STEVELY, Fond du Lac, Wis.—*Horse-power Elevator and Excavator*.—January 24, 1865.—This invention consists in certain arrangements for elevating and depressing an endless chain and pulley for excavating earth in grading railroads, &c.

*Claim*.—First, the adjustable frame C in combination with the horse-power, substantially as set forth.

Second, the arrangement of the ratchet wheels as shown in Figs. 1 and 3, in combination with the crank N and frame E, substantially in the manner and for the purposes set forth.

Third, the combination of the ratchet wheels and crank N with the ratchet bar, Fig. 3, substantially in the manner and for the purposes described.

No. 45,969.—WILLIAM BREITENSTEIN, New York, N. Y.—*Looms*.—January 24, 1865.—This invention relates to that class of looms in which the shuttle is carried by a holder half-way across the warp, and is there delivered to a corresponding holder which carries it past and out of the other half. The novelty consists in the use of sliding bars carrying shuttle holders, so made as to open and shut, and thus seize and discharge the shuttle; other sliding bars, operated by these, acting by means of slotted inclines and levers to open and shut the holders. A shield plate on each shuttle holder prevents the warp threads from getting within the arms or jaws of the holders.

*Claim*.—First, the arrangement and construction of the sliding bars C C', provided with suitable arms at their ends forming the shuttle holders, and operated in the manner and for the purpose substantially as set forth and described.

Second, the construction of the shuttle holders and the arrangement of the arm *m*, operated by a spring *o*, and acted upon by the lever G or G', in the manner and for the purpose described.

Third, the arrangement and combination with a shuttle holder of the shield plate F, in the manner and for the purpose set forth.

Fourth, the sliding bar H in combination with the levers G G' G' G', constructed and operated in the manner and for the purpose specified.

Fifth, the arrangement of the hook levers N N', with their springs *r r'* attached to sliding bar H, in combination with springs *s s'* attached to the breast beam B, and acted upon by the arms *p p'* of the sliding bar C C', for the purpose of operating said sliding bar H, in the manner substantially as set forth and described.

No. 45,970.—P. S. BREWSTER and C. M. HINES, Lime Hill, Penn.—*Stone Gatherer*.—January 24, 1865.—This invention consists of a rectangular frame mounted on rollers near the front end of the frame. At about the centre of the frame is a cross-bar, having journals which have their bearings in the side pieces of the frame. To this cross-bar are curved teeth secured and run upon the ground for the purpose of gathering the stones. When the teeth are loaded they are thrown back by means of a lever and deposited upon a platform in the rear.

*Claim*.—First, the pivoted bar C provided with gathering fingers *c*, and operated by means of the bail H, levers F, and rods E G, substantially in the manner herein described.

Second, the platform E in combination with the lock bar A' a', spring *a2*, and plate D', when the whole are employed in conjunction with the gatherers C *c*, in the manner and for the purposes explained.

Third, in combination with the gatherer C *c*, the rollers B B extending across the machine to raise the fingers over stones too large to be lifted by them, substantially as set forth.

No. 45,971.—GEORGE BUNCH, Grand River township, Mo., and JAMES A. PRICE, Breckenridge, Mo.—*Corn Planter*.—January 24, 1865.—This invention consists in a triangular frame, the rear end being supported on wheels. Above the frame and over the wheels is a shaft extending across the frame, on each end of which are seed cells, which are worked back and forth by the right handle, thus discharging a given quantity of seed at each motion.

*Claim*.—The sliding handle I and sliding bar H connected together and applied to the frame A and shaft D, substantially as and for the purpose herein set forth.

No. 45,972.—CALEB CADWELL, Waukegan, Ill.—*Sewing Machines*.—January 24, 1865.—This machine is of a shape adapted to sewing tubular goods, and is designed for quilting and other sewing in square or rectangular figures, the feed dog being, by a novel system of mechanism, so operated as to feed forward or backward, and crosswise and return. The shutter is carried in a sliding frame, and a thread catcher in the raceway assists in carrying the loop over the shuttle. The thread-winding apparatus differs from those in use by locking itself when placed in and out of contact with the driving wheel by means of a fixed spring and a projection.

*Claim*.—First, the slide E' having a groove *e'* to actuate the pin *f'* on the thread catcher F f', which guides the thread around the shuttle, substantially as described.

Second, the pivoted bar P for taking up the slack thread when operating in combination with the flipper P' and projection *k'*, in the manner herein set forth.

Third, the tension device Q2 Q4 Q5 and the pin Q2 for the spool, all mounted upon the spindle Q3 on the arm D, so that they may be removed and replaced at will.

Fourth, the adjustable block A3 and circular block H2 in combination with the notched aperture, for imparting a variable movement to the feed surface H, the whole being operated by means substantially as herein described.

Fifth, the combination of the circular blocks H7 H8, the former, H7, being moved vertically by turning on the latter, H8, so as to raise and lower the feed surface, in the manner and for the purpose set forth.

Sixth, the thread-winding apparatus R R1 R2 R3 *r* operating in connection with a spring S, whereby it is held down to work in connection with the driving wheel B, or retained out of contact therewith, as stated.

No. 45,973.—ANSEL CAIN, Holyoke, Mass.—*Means of Working Ships' Pumps*.—January 24, 1865.—A pendulum suspended from the top bar of a frame carries near its weighted lower end two segmental ratchets, the lower one being toothed on its concave and upper side, and the upper toothed on its convex or lower side. These teeth engage with pinions, forming parts of sleeves on one shaft, said sleeves being geared to disks, rigidly attached to the shaft, so as by an obvious arrangement of the gearing to obtain a continuous revolution of the shaft from the oscillating movement of the pendulum. The ship's pump is operated by a crank arrangement at the end of the shaft.

*Claim*.—Operating the pumping apparatus of a ship or vessel by means of an oscillating weight, in combination with the mechanism described, the whole arranged substantially as set forth.

No. 45,974.—CYRUS CHAMBERS, jr., Philadelphia, Penn.—*Duster for Brick Machines*.—January 24, 1865.—This invention, which relates to that class of brick machines in which the bricks are borne off on an endless apron, consists in placing on the latter a box in which sand or dust is kept in suspension, so that the bricks, as they pass through said chamber, become thoroughly covered on every side with the suspended sand or dust. The machine chiefly consists of a chamber or box, surmounted by a reservoir or hopper, from which the sand is constantly supplied, and by two hollow cones thrown upon every side of the bricks as they pass through the chamber.

*Claim*.—First, applying sand or dust to the surface of undried bricks in a chamber in which those materials, or either of them, are kept in suspension by mechanical means.

Second, passing bricks as they come from a brick machine through a box or chamber in which sand or dust is kept in suspension by mechanical means, substantially in the manner and for the purpose described.

Third, the use, in a dusting apparatus, of the cones P, constructed and operating substantially as described, for giving direction to currents of sand or dust, for the purpose specified.

No. 45,975.—J. H. CHAMPLIN, Essex, Conn.—*Railroad Car Brakes*.—January 24, 1865.—This invention relates to that portion of a railroad-car brake employed to create friction upon the wheels, and consists in the employment of stone or other mineral substance in the construction of the friction block.

*Claim*.—A friction block for railroad-car brakes, formed from stone or its equivalent, combined with and made adjustable by means of the screws *a a* in the case D, and arranged to operate substantially in the manner and for the purpose specified.

No. 45,976.—OTIS N. CHASE, Boston, Mass.—*Combined Seed and Potato Planter*.—January 24, 1865; antedated January 8, 1865.—This invention consists of a frame hanging upon an axle, to the upper part of which frame the motive power is applied, and the lower part carrying one or more ploughs, which open the ground for the seed and cover it again with wings attached to its rear. The upper and lower parts of this frame are connected by a toggle lever, which elevates or depresses the plough. A large wheel, having in its periphery seed cavities, varied in depth by screws, passes through the bottom of the seed box. Different wheels may be used for different kinds of seeds. The seed box has at its bottom an inclined plane, to which a vibratory motion may be given by projections upon the seed wheel. A small portion of the box is removed in front to allow the passage of the seed, and springs are placed upon each side of the opening. For planting potatoes, curved knives are inserted in the periphery of the wheel, and made adjustable by means of set screws. These knives carry the potato from the seed box to the rear of the plough, where they are removed by a slit in the attached conveyor.

*Claim*.—First, the combination and arrangement of the toggle lever *d* and the frames A and C with one or more ploughs, substantially as described.

Second, the projections represented by the knives or hooks *f f*, &c., in combination with the stripping slot *i*, or its equivalent, substantially as described, for the purpose set forth.

Third, the combination and arrangement of the springs *j j*, inclined plane *g*, and seed box H, with the projections, as represented by the knives or hooks *f f*, &c., substantially as described, for the purpose set forth.

No. 45,977.—LUCIUS E. CHITTENDEN, Washington, D. C.—*Material for the Manufacture of Buttons, Handles for Knives, and other purposes*.—January 24, 1865.—This invention consists in the use of the interior of the shells of the animals known as fresh-water clams, or muscles, for the manufacture of buttons.

*Claim*.—The manufacture of the articles above named, and the use, in whole or in part, for such manufacture, of the interior or nacreous portion of the shells of the fresh-water molluscan animals of the United States and North and South America, substantially in the manner above described, or in any other, substantially the same, which will produce the intended result or effect.

No. 45,978.—ELLIOT H. CRANE, Jonesville, Mich.—*Leather-channelling Tool*.—January 24, 1865.—The object of this invention is to facilitate the cutting of V-shaped channels upon the edges of harness straps, boots, and shoe soles. It consists chiefly in a metallic shank,

having a handle attached. At the other end there are two adjustable cutters which intersect each other. A gauge is adjusted to or from the shank, by which the distance from the edge of the leather may be regulated at will.

*Claim.*—The combination of the adjustable gauge G with the shank A, substantially in the manner herein shown and described.

Also, the combination of the block C and cutter B with the shank A, substantially as herein shown and described.

Also, the combination of the cutter F with the cutter B, block C, and shank A, substantially as herein shown and described.

Also, the combination of the gauge G with the block C, cutters B F, and shank A, substantially in the manner herein shown and described.

No. 45,979.—JOHN P. CULVER, New York, N. Y.—*Hooks and Eyes.*—January 24, 1865.—The beak of the hook is broad and flattened, the bend being narrow. The eye is narrow transversely, and long in the direction of the line of attachment. To insert the hook it must be presented laterally, or at an angle to the eye.

*Claim.*—A hook and eye, combining the widening *e* of the bill of the hook with the narrower opening *b* of the eye, substantially as and for the purpose herein specified.

No. 45,980.—CHARLES DISSTON, Philadelphia, Penn.—*Method of attaching Handles to Cross-cut Saws.*—January 24, 1865.—This invention consists in a handle provided with ferrules and side straps, a plate being placed in a slot to receive the saw, on the upper edge of which are projections to fit in notches made in the lower edge of the saw; this plate hanging on a pivot passing through the handles, strap, and plate, so that when the saw plate is placed in the slot of the handle, the plate will incline, and receive the projection of the plate in the notches of the saw, in which position the saw is secured by driving a wedge over the saw.

*Claim.*—First, the handle A, its ferrule *c* and strips *b*, the key F and self-adjusting plate D, the whole being constructed and arranged for attachment to the end of the saw, substantially as described.

Second, the self-adjusting plate D, hung to the strips *b*, and having projections *e e*, adapted to notches in the edge of the saw, all as set forth.

No. 45,981.—WILLIAM H. DOANE, Cincinnati, Ohio.—*Scroll Saws.*—January 24, 1865.—This invention consists in providing in a scroll sawing machine a tubular stock, in which the saw plays, and at the lower end of which is placed a guide for the saw of hardened steel plates at the back and sides of the saw. This stock is also provided with a door at its lower end, and also in a tubular sleeve, through which the saw stock passes and is held at any desired height, all forming a compact and easily adjusted arrangement.

*Claim.*—First, the combination of the devices A B C *a b*, the same being adapted for and constituting a portion of a scroll sawing machine or saw-mill, substantially as herein set forth.

Second, the combination of the tubular sleeve C, key *c*, screw *d*, recessed or tubular shank *e*, and guide stock D, substantially as and for the purpose set forth.

Third, a tubular foot stock D, with a guide holder D' on its lower end, the said holder being constructed and having guides fitted upon it, substantially as and for the purpose set forth.

Fourth, the combination of the tubular sleeve C, the stock D, feather *e*, and set screw *d*, substantially in the manner and for the purpose described.

Fifth, the employment of a door E, or its equivalent, in combination with a foot stock D D', substantially as and for the purpose described.

No. 45,982.—PORTER DODGE, Perkinsville, Vt.—*Joining and Fitting Corners of Soapstone Stoves.*—January 24, 1865.—The ends of the stove have grooves, into which the sides of an angular iron plate are fitted. The plate is secured by tenons to the top and bottom of the stove. An open-work metallic cap fastened to the plate covers it and the ends of the stove.

*Claim.*—In combination with the grooved soapstone slabs A, the iron or metal corner or angular plate B, substantially as and for the purposes described.

Also, in combination with the grooved soapstone slabs A and angular plate B, the cap C, substantially as and for the purpose specified.

No. 45,983.—WILLIAM C. DODGE, of Washington, D. C.—*Revolving Fire-arms.*—January 24, 1865.—The frame of the arm is jointed so as to allow the barrel and cylinder to swing to one side, or the barrel to swing to one side of the cylinder, for exposing one end of the said cylinder, to permit the action of a cartridge retractor; and the improvement consists in mounting the cylinder on a tubular pin rigidly attached to the frame at one end, and in a particular arrangement of latching device for locking the movable frame securely in its closed position.

*Claim.*—First, the sliding lock-bolt *q* arranged in bridge piece *p* as shown and described, whereby the parts can be locked automatically, and can be unlocked and swung over by a single application of the thumb, and the whole operation performed by the use of one hand only.

Second, hanging the cylinder on the tubular bolt *g*, or hollow journal *h*, when connected by the frame at one end only, whether at the front or rear.

Third, supporting the detached end of the cylinder by the projection *i* and groove *j*, substantially as specified.

Fourth, locking the projection *i* in place by the latch *k*, or its equivalent, substantially as shown and described.

Fifth, so arranging bolt *l* and latch *k* that both can be operated simultaneously and by a single movement.

Sixth, constructing and arranging bolt *l* and latch *k* in such a manner as to permit the front and rear portions of the frame to be locked automatically, as they are swung into position for firing, whereby the use of one hand only is required in the operation.

No. 45,984.—A. ELIAERS, Boston, Mass.—*Elastic Studs for Doors*.—January 24, 1865.—This invention is applicable to doors, French windows, &c., where two swinging edges or surfaces are brought in contact with each other, its object being to prevent noise or jar and to hold the parts in proper relative positions. The invention consists in the use of two or more elastic studs or buttons, working or rubbing against each other in the ends or edges respectively of the swinging, sliding, or otherwise movable part and the stationary rebate or jamb.

*Claim*.—First, my improvement in the construction of doors, French windows, &c., which consists in the use of two or more elastic studs or buttons, working or rubbing against each other respectively in the ends or edges of the swinging, sliding, or otherwise movable part, and the stationary rebate or jamb, as described.

Second, the combination of the elastic studs or buttons, operating together, as described, and one or more elastic studs or buttons placed in the rear of the first set of studs or buttons, the whole serving to prevent noise and to hold in position, as set forth.

No. 45,985.—EDWIN ESTABROOK, Jersey City, N. J.—*Explosive Shell*.—January 24, 1865.—The interior cavity of the shell is bounded by plane sides in the form of a regular polyhedron. It is found that there are "planes of weakness" radiating from the axis of the shell cast in this way, along which the tendency is to yield to the force of the explosion of the charge, whereby the shell is caused to divide itself into pieces of nearly uniform size and corresponding in number to the faces of the cavity. Much greater destruction is supposed to be effected in this way than follows the explosion of ordinary shells.

*Claim*.—The plane or nearly plane faces *B*<sup>1</sup>, *B*<sup>2</sup>, &c., on the interior of an explosive shell, arranged relatively to each other in the manner and so as to produce the effect herein set forth.

No. 45,986.—EDWIN ESTABROOK, Jersey City, N. J.—*Fuze for Shells*.—January 24, 1865.—This invention consists in making the inner end of a metallic fuze so thin that it will collapse by the bursting charge, or close, thus economizing and strengthening the rupturing force.

*Claim*.—The employment in explosive shells of a fuze plug, adapted to collapse and crush by the action of the exploding charge and to stop the escape of gas through the fuze plug, substantially as herein set forth.

No. 45,987.—J. W. FAWKES, Decatur, Ill.—*Cultivator*.—January 24, 1865.—The frame is pivoted near its rear to the axle, and is moved laterally by a T-shaped foot lever, working upon the draught-pole. The teeth are drawn up from the ground by a short lever attached to a segment, over which works a linked or jointed rod. This segment is held back of a wooden pin. The ends of short levers are fastened up by leather straps when the ploughs are not in use.

*Claim*.—The frame *E* applied to the draught-pole *C*, as shown, in connection with the foot-levers *H* *G*, arranged with the frame, to admit of the latter being operated as and for the purpose specified.

Also, the pivoted plough standards *J* connected to segments *M* by bars *L* and links *J*, in connection with the wooden pins *l* in the segments, all arranged substantially as and for the purpose set forth.

Also, providing the segments *M* with handles *N* in connection with straps *O* on the frame *E*, as and for the purpose set forth.

No. 45,988.—W. H. FREEMAN, Bloomfield, Iowa.—*Gang Plough*.—January 24, 1865.—This invention relates to the combination and arrangement of adjustable plough beams within the frame of the machine, whereby the driver from his seat can regulate the depth of the ploughs as well as their inclination or pitch.

*Claim*.—In combination with the stationary frame *A*, the hinged plough-beam or beams *F* and levers *G*, *I*, and *H*, for the purpose of adjusting the height as well as the inclination of the ploughs, substantially in the manner and for the purposes described.

No. 45,989.—DWIGHT B. FULLER, Buffalo, N. Y.—*Piston Packing for Pumps*.—January 24, 1865.—To form a pump piston, a disk is fixed at the end of the rod with a movable disk above or behind it, the latter being held to duty by a screw nut. Between these disks there

is a cup-shaped packing made of leather, within the cup of which is a disk of soft rubber. As the leather packing wears loose, it may be pressed out by screwing the moving disk down against the rubber disk, which disk is always protected from wear and other injury.

*Claim.*—The combination of the follower E, elastic disk G, and leather bonnet H, for the purposes and substantially as described.

No. 45,990.—SQUIRE GAMBELL, Otisco, N. Y.—*Washing Machine.*—January 24, 1865.—This invention consists in the employment of a suspended oscillating suds-box of semi-cylindrical form, in connection with a fixed or stationary dash-board attached to the suds-box.

*Claim.*—The oscillating suds-box A provided with the horizontal slats *g* and wash-board F, in combination with the fixed or stationary dash-board E, all arranged substantially as and for the purpose set forth.

Also, the pivot-bar G with upright lip K attached, in connection with the projections *l*, one or more, on the exterior of the suds-box, for the purpose specified.

No. 45,991.—E. P. GARDINER, New York.—*Apparatus for Desulphurizing and Amalgamating Ores.*—January 24, 1865.—This invention consists of a furnace made of brick or iron and supporting a vertical cylinder. The cylinder is provided with a shaft, to which is keyed a perforated diaphragm, the shaft being also provided with agitating arms, as shown. From the lower part of the cylinder extends a channel connecting with a vertical pipe, which is provided with a feed screw, the said pipe having a funnel attached to it near the top. The cylinder is supplied with mercury from a reservoir by means of a pipe. From the upper part of the cylinder extends a pipe which terminates in a condensing tube, the said condensing tube being provided with a shaft and agitators. The top of the cylinder is provided with a channel through which cold water is caused to circulate, the waste being carried off by a pipe into a condensing tube. Rotary motion is imparted to the shafts by means of suitable gearing.

*Claim.*—First, the form and construction of the receiving and operating vessel F, by which it is to be adapted to the uses and purposes required and designed, as above described.

Second, the vertical shaft and its attachments of pins and revolving perforated diaphragm plate, combined, arranged, and operating within the vessel F, in the manner and for the purposes described.

Third, the combination and arrangement of the operating vessel F, the feed-pipe and endless screw I K, and the eduction or discharge pipe P, and the rotation of the shaft and attachments, operating as described, so as to effect a continuous and uninterrupted operation of the process, without stopping to charge or discharge the matter under treatment.

Fourth, the combining and arranging the vessel F and the apparatus connected with it and its contents with the washing tub or condenser and separator by means of educting pipe P and water pipe Y, operating together as described.

Fifth, desulphurizing the dust and dissolving the sulphur therein contained by subjecting the same to treatment with heated mercury, in a vessel in which the atmosphere or external air is admitted with the pulp, and uniting the fumes of the mercury with the fumes of the sulphur as they pass off within a vessel arranged, constructed, and operating as described.

Sixth, the construction of the water trough in the head of the operating trough, provided with a supply and discharge pipe for keeping cool the head and stuffing box, constructed and arranged and operating as described.

No. 45,992.—W. C. GIFFORD, Jamestown, N. Y.—*Hay Spreaders.*—January 24, 1865.—This invention consists in the employment of a reel, provided with suitable rakes, the bearings of which reel are secured to a tilting frame which is pivoted to the main frame and is adjustable at any height by means of a hook and chain in front. The reel is rotated by a belt passing around a drum upon one of the wheels, two pulleys secured to a hand lever, and a pulley upon the axle of the reel. The hand lever moves upon the same pivot as the tilting frame, and the pulleys being secured to it, secures both the tilting of the frame and the same tension of belt at any height of the frame. The belt is tightened by means of a serrated bar and catch attached to the frame. The rakes are held in proper working position by means of chains at their centres and teeth passing through their extremities and nearly to the centre-shaft, where they are held in position by spring stops, which stops are depressed at the proper time by cams, thereby forcing the teeth and allowing the rakes to revolve and release the hay. The thills are also made adjustable in length by being secured to the main frame by loops and pins passing through holes in said loops and thills.

*Claim.*—First, the draught pole or thills D, provided with a series of holes *d*\*, and operating in combination with the pins *d*, loops *b b'*, and cross-bars *c c'*, of the frame A, in such a manner that the same can be readily taken out and changed, or lengthened or shortened, as may be desirable.

Second, the combination of the tilting frame F with the reel E and chain *h*, substantially as and for the purposes shown and described.

Third, the hand lever G in combination with the belt *i* and tilting frame F, applied as herein set forth, so that by touching the hand lever the belt and lever combined will raise or lower the frame.

Fourth, the serrated bar *m* and catch *m'*, in combination with the lever *G* and belt *i*, as and for the purposes specified.

Fifth, the rakes *H*, provided with teeth *p p'* and applied to the reel *E*, in combination with the chains *p'*, spring stops *q*, and cam *q'*, or their equivalents, constructed and operating substantially as and for the purpose shown and described.

No. 45,993.—HORACE N. GOODRICH, Aurora, Ill.—*Grain Separator*.—January 24, 1865.—The lower edge of a movable hopper is provided with feed regulating boards that allow a large opening for the passage of cobs and large substances, and still prevent the too rapid passage of the grain. In the gang of sieves two or more are adjustable and provided with a like feed regulator. The shoes are provided with grooves running into each other so as to allow the sieves to be set at different angles without being entirely removed.

*Claim*.—First, providing the hopper with the feed-regulating boards *B*, substantially as and for the purpose specified.

Second, the stationary strip or feed-regulator *E*, when constructed and operating as and for the purposes set forth.

Third, the gang of series *F*, with two or more of the sieves in the gang adjustable, and provided with the feed-regulator *E*, substantially as and for the purpose herein described.

Fourth, providing the shoes *G* with the grooves *I*, so running into each other that a sieve or screen can be changed to different angles of inclination without being removed from the shoes, substantially as and for the purpose set forth.

No. 45,994.—JACOB HAEGE, Shiloh, Ill.—*Cask for Preserving Beer, &c.*—January 24, 1865.—This invention consists of a vessel resting upon a block from which rise two side pieces, having cross-bars above. The said vessel is held in place by means of screw clamps, and is closed by means of a head, which is composed of two plates, which compress between their edges a ring of elastic packing. The plates are held together by means of screw bolts which pass loosely through the upper plate, and are securely screwed into the lower one. The two plates may be drawn together, and the ring made to expand by means of a left-hand screw thread on the lower end of the piston rod. The piston may be forced down upon the liquid by means of a common screw thread upon the upper part of the piston rod and a hand nut.

*Claim*.—The combination of the piston *G*, and its screw *c*, with the plates *xx'*, and packing *F*, substantially in the manner herein shown and described, so that by revolving the said piston rod the periphery of the piston will be expanded or contracted, all as specified.

The employment of the ratcheted nut *I*, in combination with the screw piston rod *G*, and piston *E*, substantially as herein shown and described.

The construction of the plate *x'*, with cavities to receive the screws, substantially as and for the purpose herein shown and described.

No. 45,995.—JOHN HANES, Polkville, Ky.—*Ploughs*.—January 24, 1865.—In this plough the sole standard and brace are constructed of one piece, and the beam and handles attached at two single points.

*Claim*.—Forming the plough stock—that is, the curved front bar *b*, ground bar *a*, and brace *c*—in one piece, in combination with the manner herein described and shown of adjusting the same to the beam *B*, and handles *R*, through the intermediary of the brace *F*, and cross bar *W*, substantially as set forth.

No. 45,996.—MARK HAYS, Worcester, Mass.—*Sap Spile*.—January 24, 1865.—This invention consists of having a screw at one end for the purpose of screwing into the tree, the other end being slightly conical in form; near the centre there is a circumferential groove made for holding the bucket which receives the sap, so that the former will be close to the spile, and the sap prevented from being blown over the edge of the same, and one which will prevent the leakage of sap from the tree around the spile.

*Claim*.—A tubular sap spile, provided or formed with a screw to screw into the tree, a circumferential groove extending wholly or partially around the spile to receive the handle of the pail which receives the sap, and a square, *b*, to receive a wrench to screw the spile into the tree, substantially as herein shown and described.

No. 45,997.—CLARK R. HEWETT, Wanpung, Wis.—*Straw Cutter*.—January 24, 1865.—In this invention two straight knives rotate in an elliptical frame moved by a cog-wheel in its hub connected with the shaft of the feed roller. A stationary knife is kept in position with a spring and wedges just outside and parallel with the feed roller.

*Claim*.—The combination of the rotary knives *L L*, hub *K*, braces *l l*, stationary knife *E*, and feed roller *c c'*, all constructed, arranged, and operating substantially as and for the purposes specified.

Also, the adjusting of the knife *E*, by means of the sliding wedge *F*, arranged substantially as and for the purpose specified.

Also, the spring *g*, when applied to the knife *E*, and used in combination with the rotary knives *L L*, substantially as and for the purpose set forth.

No. 45,998.—JAMES H. HOFFMAN, New York, N. Y.—*Turn-down Enamelled Paper Collar*.—January 24, 1865.—This invention consists in the use of linen paper, and an enamel on one surface, to form the turn-down collar; that is to say, by cleaning the linen paper to open its pores and applying thereto in a warm state a composition of white wax and a trace of ultramarine. The union between the enamel and paper becomes so perfect that the paper thus prepared, after being polished on its enamelled surface, can be bent without fracturing the fibre of the paper or injuring the enamel.

*Claim*.—The new article of manufacture herein described, constituting a turn-down or folded collar, made and finished in the manner and for the purpose set forth.

No. 45,999.—ELLIS A. HOLLINGSWORTH, South Braintree, Mass.—*Machine for Folding Paper Bags*.—January 24, 1865.—This invention consists of a machine to fold the bottom of paper bags, which is effected by stretchers to expand two sides, while the bottom is folded on itself by hinged flaps moving transversely to the stretchers.

*Claim*.—The combination of the stretchers K K, or their mechanical equivalents, with the leaves or flaps g g, the whole being so as to operate together substantially in manner and for the purpose or objects described.

Also, in combination with the two leaves g g, and their elevating mechanism as described, the opening bars h h, applied to the leaves and the posts, substantially as and so as to operate as set forth.

No. 46,000.—FREDERICK W. HOWE, Providence, R. I.—*Rear Sight-base for Fire-arms*.—January 24, 1865.—The rear band, holding stock and barrel together, is composed of two parts or halves. Between projecting lugs on the underside of the stock, the strap loop is swivelled. Between similar ones on the top of the barrel the rear sight is hinged.

*Claim*.—The employment of a band made of two parts and fitted to a recess or groove in the outer surface of the barrel and stock, and secured as described, in combination with the barrel, stock, and rear-sight as described and for the purpose set forth.

Also, the combination of the said band, made in two parts and fitted to a recess or groove in the barrel and stock, and secured as described, in combination with the back strap swivel, as described and for the purpose set forth.

No. 46,001.—EDWARD HUBER, Kelso, Ind.—*Horse Rake*.—January 24, 1865.—This invention relates to that class of rakes in which the teeth are straight, running upon the ground, and revolving to discharge the load. It consists of spring catches, which retain the rake in working position, preventing its revolution in either direction, but readily releasing them when the load is to be discharged.

*Claim*.—The spring or elastic plates G, attached to the handles F F, and provided with the projections d e, in connection with the plates H on the teeth of the revolving rake head D, the handles being connected by pivot bolts to pendants B on thills A, and all arranged to operate in the manner substantially as and for the purpose set forth.

No. 46,002.—F. HULLHORST, Freeport, Ill.—*Vegetable Cutter*.—January 24, 1865.—This invention consists in a cutting wheel, and changeable feed boxes, arranged with a suitable case for cutting vegetables of various kinds, for family use or for fodder.

*Claim*.—The combination of the changeable feed boxes H d I and J f f with the cutting-wheel D G, and casing A, all arranged to operate as specified.

No. 46,003.—F. HULLHORST, Freeport, Ill.—*Bread Cutter*.—January 24, 1865.—This invention is set forth in the claims and engravings.

*Claim*.—The curved slot G in the plate H, attached to box A, in connection with the knife D, arranged in connection with a slide, lever, pawl, and rack, or their equivalents, to operate the sliding bottom B, substantially as and for the purpose specified.

Also, the adjustable plate O, when applied to the device to operate in connection with the bar N, on the bolt F of the knife D, substantially as and for the purpose set forth.

Also, the guide plates C C, in combination with the knife D and slotted plate H, for the purpose specified.

Also, the adjustable bar N on the bolt F of the knife D, in connection with the cross-head M at the end of the slide I, substantially as and for the purpose set forth.

No. 46,004.—FRITZ JACOB, New York, N. Y.—*Screw Propeller*.—January 24, 1865.—In this propeller the blades are hollow and consist of two leaves, which unite at their extremities, the same being bow or loop shaped.

*Claim*.—The screw propeller constructed with hollow bow-ended blades B, of the form herein shown and specified and for the object set forth.

No. 46,005.—JULIUS JOHNSON, Baltimore, Md.—*Apparatus for Separating Metallic Filings*.—January 24, 1865.—This invention consists of a box containing a hopper, reservoir, and a revolving apron extending from beneath the hopper to the mouth of the reservoir. A series of temporary magnets are attached to a shaft in such a manner that they may be sus-

passed directly over the surface of the apron. When the machine is in operation the filings are fed in the hopper, and from thence they pass to the apron. The apron carries them forward towards the mouth of the reservoir, and the magnets at the same time are caused to move backward and forward over the surface of the apron, collecting the filings of iron and steel. When the magnets arrive at the mouth of the reservoir, the shaft to which they are attached is caused to revolve, and carries the magnets directly over the mouth of the hopper. While the magnets are in this position the circuit is broken, and the steel and iron filings are allowed to drop into the hopper. The apron carries the filings and dirt which have not been attracted by the magnets to an aperture, where they are discharged.

*Claim.*—First, the combination of temporary magnets fixed upon a shaft, which is made to traverse back and forth as described, with a travelling apron for carrying the filings to be cleaned, substantially as above set forth.

Second, breaking and re-establishing the circuit between an electrical battery and a series of temporary magnets automatically, by means of the cams *m*, the vertical rack, and the lever *i*, under a mode of operation substantially such as and for the purpose above described.

Third, in combination with the aforesaid lever *c'*, rack 14, and temporary magnets *p*, the separate reservoir *U* and inclined partition *V*, for the reception of the iron and steel filings as explained.

Fourth, the sliding rock shaft *s*, the connecting rods *c*, cranks *f*, and shaft *g*, in combination with the gear-wheel 7, substantially as described.

Fifth, the combination of the segment gear-wheel 5, pinion 4, and shaft 13, for imparting intermittent rotation to the apron *c*, as explained.

Sixth, operating the rack by means of the lever *i* and the pin *h*, on the wheel 7, substantially as described.

No. 46,006.—B. H. LIGHTFOOT, Philadelphia, Penn.—*Method of Oiling Wool*.—January 24, 1865.—This invention consists in the use of refined petroleum, or other oily hydro-carbon, mixed with one-third of its weight of olein oil, or lard oil, for oiling wool.

*Claim.*—First, the application of prepared petroleum or other oily hydro-carbons to the oiling of the wool.

Second, the application to the oiling of wool of oily hydro-carbons, in combination with olein or lard oil, or other equivalent material.

No. 46,007.—EDWARD MACKEVITZ and WILLIAM FRANK, Milwaukee, Wis.—*Stove-pipe Damper*.—January 24, 1865.—This device is to be placed in a stove-pipe, and consists of two fixed perpendicular partitions, set parallel to each other and extending entirely across the pipe; the lower end of the upper partition extends a little way below the upper end of the lower one; two movable horizontal partitions are fixed at the top and bottom of these fixed partitions, in such a manner that they compel the products of combustion to take a circuitous course before reaching the mouth of the pipe, which pipe is heated by these means.

*Claim.*—First, the arrangement within a drum or a section of a stove-pipe of the fixed and movable partitions *C D*, and the fixed and movable partitions *C' D'*, in two series, one above another, substantially as above described.

Second, weighting the movable partitions *D D'*, substantially in the manner described.

No. 46,008.—T. MAYHEW, Poughkeepsie, N. Y.—*Photographic Card Mount*.—January 24, 1865.—The improvement consists in coating the card with suitable gum or mucilage; the photograph while damp from the washing bath is placed upon it and pressed, thus reversing the ordinary mode.

*Claim.*—A photographic card mount, the surface of which is partially or wholly covered with gum or other suitable cement, substantially as and for the purpose set forth.

No. 46,009.—E. C. MARTIN, West Liberty, Iowa.—*Horse Rake*.—January 24, 1865.—The object of this invention is to secure the teeth at such an inclination as will insure the ready performance of their work, while the supports being flexible, the angle of inclination may be changed at will. The invention will be readily understood from the claim and engraving.

*Claim.*—The combination with a revolving rake *A B B'* of the flexible metallic supports *D D'*, attached at one end and so arranged as to move in contact with the ground behind the rake head, substantially as and for the purpose explained.

No. 46,010.—GEORGE C. MERRILL, Chicago, Ill.—*Lantern*.—January 24, 1865.—This invention consists in providing a lantern base with a circular rack, so as to operate the wick ratchet and raise or lower the wick by rotating the oil cup, without removing it from the lantern.

*Claim.*—First, operating the wick ratchet in a lantern or lamp by a rotary motion of the oil cup or lantern.

Second, operating the wick ratchet by the rotary motion of a rack or disk.

Third, the circular rack or disk *a*, when used for the purpose of operating a lantern-wick ratchet.

Fourth, the rack or disk *a*, in combination with the pinion *c*, and wick ratchet *d*.

Fifth, the combination of the rack or disk *a*, the pinion *c*, and ratchet *d*, with the oil cup *C*, and base *B*, all being constructed and operating substantially as set forth and specified.

No. 46,011.—JOHN A. MINOR, Middletown, Conn.—*Pocket Lantern*.—January 24, 1865.—This invention consists in a mode of constructing a pocket lantern, so that when not in use its sides, bottom, and top may be compactly folded together, and again at pleasure unfolded and adjusted for use, embracing also a receptacle for candles and matches.

*Claim*.—A portable or pocket lantern, constructed with folding sides and a folding top and bottom, substantially as herein shown and described.

Also, having the rear side *b* of the lantern constructed in the form of a narrow or shallow box, provided with receptacles for candles and matches, and having its bottom provided with a pivoted plate to which the candle socket is attached, and arranged so that the candle may be adjusted within the lantern or the box, substantially as herein described.

No. 46,012.—JAMES A. MCPHERSON, Troy, N. Y.—*Ballot Box*.—January 24, 1865.—This ballot box consists of three parts, the ballot receptacle, the cover, and the ballot receiver. In the cover is an opening, closed by a spring valve, operated by a lever projecting from the side of the box. Projecting from the side of the valve is a lug, which operates a lever attached to a bell. The ballot receiver is of glass, and is supported by a frame on the top of the box. The top of the receiver is closed by a cap, which screws into the top. In this cap there is an opening, under which are two inclined plates, which extend down into the box; one of these plates has an edge, against which the ballot, when folded, rests.

*Claim*.—First, the combination in a ballot box of the body or receptacle *A*<sup>3</sup> and the top *A*<sup>1</sup>, separated by a valve, constructed and applied to each other, substantially as shown.

Second, the top *A*<sup>1</sup> of the ballot box, composed of an open cylinder with transparent sides, a cover *S*, with its valve and bell and hammer, and a ballot-retaining mouth-piece, substantially as above set forth.

Third, in a ballot box, retaining the ballot in a receiving mouth set within transparent walls, so that it cannot be withdrawn upwards, but remains suspended for inspection until pushed through the mouth by a succeeding ballot substantially as described.

Fourth, the removable mouthpiece *4*, constructed so as to retain a ballot suspended in it, and prevent its withdrawal, substantially as above described.

No. 46,013.—WILLIAM MOREHOUSE, Buffalo, N. Y.—*Wood-saw Frames*.—January 24, 1865.—The object of this invention is to provide a frame that will allow a larger log of wood to be sawed before striking the cross-strain bar, and at the same time effectually strain the saw, and it consists in a strain bar that is arched towards the upper part of the frame, between which and the frame is placed a strain and screw, so that by turning the screw one way it presses upon the strain bar in such a way that it presses the ends of the frame asunder, and when turned the reverse way will release the saw from strain.

*Claim*.—Straining a saw blade *B*, by means of an arched or thrust brace *E*, or its equivalent, constructed and operated substantially as described.

No. 46,014.—J. W. MOYER, Cherry Valley, N. Y.—*Sofa*.—January 24, 1865.—This invention consists in having the ends of the sofa attached to the bottom of a seat by means of hinges or joints, and having said ends constructed and arranged in such a manner that they may be adjusted and secured in an upright or nearly upright position, like the permanent ends of an ordinary sofa, or be capable of being adjusted and secured in a horizontal or less inclined position, so that the sofa may be converted into either a right or left lounge, with an end more or less inclined, as desired.

*Claim*.—First, a sofa or lounge constructed substantially as described; that is to say, with adjustable end pieces *D D*, provided with sector-shaped supports *F F*, and a locking arrangement, consisting of a pawl *G* and ratchet *H*, so that the supporting sector shall at all times form a brace for the back and hinges, and shall form a continuous back and finish when the ends *D D* are vibrated from their most erect position.

Second, making the end finish on the outside of the front of the seat frame so as to cover the joint of vibration of the end pieces, a portion of the front of the latter vibrating immediately withinside of the end finish.

No. 46,015.—J. W. MOYER, Cherry Valley, N. Y.—*Sawing Machine*.—January 24, 1865.—The saw is suspended between pivoted bearings, on the upper and lower vibrating levers, and its vertical position is secured by slides, working in guides; the threaded straining rods are secured through the said rolling cylindrical bearings. To secure an equal tension upon the saw at all points of its stroke, one of its points of suspension is removed so much further than the other from the axis of vibration as is equal to the versed sine of half the arc described in its vibration.

*Claim*.—First, the combination of the slides *M M*, moving vertically in guides *ff* and *gg*, respectively, with the screw tension rods *L L* passing through the threaded bearings *bb'*, Fig. 1, by which the saw is preserved from lateral deflection, rendered capable of relative vertical adjustment, and means afforded for the attachment of varying lengths of saws.

Second, the herein described rolling cylindrical bearings *bb b b'*, retained by metal straps or boxes *c c c e'*, applied above and below the levers *F F'*, respectively, and threaded for the passage of the screw tension rods *K L L*.

Third, the method of hanging the saw from the upper and lower bearings of the straining

rods at *b* and *b'*, Figs. 1 and 3, so that when the levers are horizontal one of the bearings *b'* shall be in a line with the saw, which has a determinate motion by means of its guides, while the other bearing *b* shall be removed an additional distance from its centre of vibration equal to the versed sine of half the arc described by it in its vibrating motion.

No. 46,016.—J. W. MOYER, Cherry Valley, N. Y.—*Coats with Inner Sleeves*.—January 24, 1865.—This invention consists of a sleeve or cuff which buttons around the wrist and is attached to the inside of an ordinary sleeve.

*Claim*.—As an article of manufacture, a coat with an auxiliary sleeve or cuff B within and secured to the outer sleeve A, as described and represented.

No. 46,017.—ANDREW NARAMOR, Berlin Heights, Ohio.—*Hay Rack*.—January 24, 1865.—This invention consists in the arrangement and construction of the several parts composing the rack, and the peculiar mode of attaching the same to the bolster.

*Claim*.—The construction and arrangement of the bolster C and pieces F, in combination with the rack, as and for the purpose set forth.

No. 46,018.—W. S. NEWTON, Norwich, Conn.—*Hay Elevating Fork*.—January 24, 1865.—This invention will be understood from the claim and engraving.

*Claim*.—The combination and arrangement of the bar *c*, tang or shank A, with tines and handle attached, semicircular bar D, and catch lever E, with the spring G and rope H connected with *k*, substantially as and for the purpose herein set forth.

No. 46,019.—A. M. OLDS, Chicago, Ill.—*Coal Screen*.—January 24, 1865.—This invention consists of a coal or ash screen made in the shape of a parallelogram, the axis being passed through it eccentrically, or through diagonal corners. The device may be placed in a box of any shape, but a six-sided one is most convenient.

*Claim*.—The end coal screen above described, constructed substantially as set forth, and consisting of the closed box A A', the part A being removable, and a screen D revolving eccentrically within the part A', said screen having a door at one end or side, and being so journaled on the part A' of the box as to be removable at pleasure.

No. 46,020.—J. H. PAINE, Hartford, Conn.—*Cut-off for Steam Engines*.—January 24, 1865.—A spiral cam is applied in combination with the governor and main and cut-off valves of a steam engine, so that by its action on the rod of the cut-off valve the steam is cut off instantaneously, or nearly so, and wire-drawing is avoided. The cam being in action but a short space of time, leaves the governor free during the greater part of the stroke. By the action of a latch the main cut-off valves are locked open, and thus prevented from closing the ports until the proper time arrives. By the action of a cam and pin the cut-off valves are disconnected simultaneously and allowed to move in the same or in opposite directions, as occasion may require.

*Claim*.—First, the spiral cam J, applied in combination with the governor and with the main valve C, and cut-off valve D, substantially as and for the purpose set forth.

Second, the sliding pin *g* and hinged latch *e*, in combination with the valves C D and cam J, constructed and operating substantially as and for the purpose described.

No. 46,021.—GEORGE R. PERCY, New York, N. Y.—*Composition for Rendering Barrels Impervious to Oil, &c.*—January 24, 1865.—This invention consists of a composition made by dissolving one pound of borax in three gallons of water, over a fire, to which are added five pounds of shellac. When this is dissolved, either glycerine, molasses or honey is added, or glue previously dissolved in water. The pores of the wood, of which the barrels are made, are completely saturated with a soluble silicate, after which this composition is applied.

*Claim*.—Invention for coating barrels and other vessels to contain oils and fats: is a composition composed of water, borax and shellac, in about the proportions specified, with the addition of a small quantity of glycerine, molasses, honey or glue.

Also, the process of the previous saturation of the wood with soluble silicate, in combination with the coating of the barrel or vessel with the above-described composition.

No. 46,022.—GEORGE R. PERCY, New York, N. Y.—*Compound of Condensed Milk and Uncrystallized Sugar*.—January 24, 1865.—This invention consists in combining with the ordinary condensed milk, glucose or other uncrystallizable sugar, the object being the better to preserve the milk, and get also a better tasted article.

*Claim*.—The commingling of a quantity of uncrystallizable grape sugar with condensed milk, in the manner substantially as above described.

No. 46,023.—REUBEN H. PLASS, New York, N. Y.—*Revolving Fire-arm*.—January 24, 1865.—The cylinder of the revolver is encircled at its middle with a trunnion band within which it can freely revolve when in position, and on the trunnions of which it can be turned laterally within the frame, so as to explode the chambers. The cylinder is also provided with a hinged breech-piece.

*Claim.*—First, the trunnion ring C c, adapted to embrace the revolving part, and to allow it to be turned about on the trunnions, substantially in the manner and for the purpose herein set forth.

Second, the hinged cap or rear piece G g, arranged and operated substantially as herein represented and described.

Third, in combination with means for revolving the chambered part B on an axis transverse to the line of the barrel, making the face or front end of the chambered part B portion of a sphere, having its centre at the point where said transverse axis crosses the longitudinal axis, and giving a corresponding concave form to the adjacent fixed parts, all substantially as and for the purpose herein set forth.

Fourth, the convex projection G<sup>2</sup> on the rear face of the cap G, and the corresponding form of the recesses in the stationary part A, to serve in combination with the rotating part B, and perform the double function of a stop and an abutment for the recoil, all substantially as herein set forth.

No. 46,024.—PETER PRESCOTT, Booneville, N. Y.—January 24, 1865.—*Composition for Varnish, &c.*—This invention consists of a composition of water, borax, shellac, isinglass and white vitriol. The water is mixed with shellac and brought to a boiling heat, when the borax is added. When all is dissolved, the isinglass dissolved in as little water as possible is added, and while cooling the white vitriol is added.

*Claim.*—A composition for varnishing, painting, &c., made of the ingredients herein specified, and mixed together substantially in the manner and about in the proportion set forth.

No. 46,025.—EDMUND D. REYNOLDS and O. BRADFORD REYNOLDS, North Bridgewater, Mass.—*Combined Cultivator and Harrow.*—January 24, 1865.—This invention consists in the combination of a series of cultivator teeth or shares, with a series of rotary harrow teeth placed in the rear of the shares, and driven by the wheel or wheels of the carriage; the series of cultivator shares and the cylinder of rotary teeth being hinged respectively to the frame or carriage, so that they rest loosely upon the surface of the ground while operating, their extent of penetration being determined by their capability of movement below the plane of the draught and guide wheels of the carriage, and the movement of the carriage.

*Claim.*—The combination of the cultivator shares *k* and rotary harrow teeth *m*, when so arranged with respect to a carriage *a* that they are self-adjusting in their action upon the soil being cultivated, substantially as set forth.

No. 46,026.—GEORGE S. ROGERS, Thetford Centre, Vt.—*Machine for Drying Paper.*—January 24, 1865.—The claim, in connection with the engraving, explains the nature of this invention.

*Claim.*—The said improved paper-drying machine constructed with one or more drying cylinders A B, two endless aprons R S, and sundry guide rollers and planes, arranged in manner and so as to operate substantially as described.

No. 46,027.—SEYMOUR ROGERS, Pittsburg, Penn.—*Hay Elevator.*—January 24, 1865.—This invention consists in a device for elevating hay in barns, the implement, with its load, being raised by a horse. It is more simple in construction than the ordinary hay elevator, and may be manipulated with greater facility.

*Claim.*—As an improvement in hay elevators, the rod D, provided with the jointed arms F F, in connection with the pointed case A, all arranged to operate in the manner substantially as and for the purpose set forth.

Also, the notches *e f* in the rod B, in connection with the spring G and the hole *a* in the cap *c*, and the eccentric H, all arranged substantially as and for the purpose specified.

No. 46,028.—FRANCIS G. SANBORN, Boston, Mass.—*Button-hole Cutter.*—January 24, 1865.—The cutting blade is on the interior of the upper handle of the scissors, between the hand of the operator and the pivot. The cutting-block or anvil is held opposite, in a dovetail-shaped frame. This frame is held to its place by a spring outside or underneath the handle, bearing against the handle and against a ring or belt attached to the dovetail-shaped frame.

*Claim.*—First, a cutting-bed for cutters and punches to be applied to the shanks of scissors, secured and held adjustably on the shank by means of spring pressure, substantially as described.

Second, the use of the dovetailed or grooved frame of the cutting bed B, for holding movable blocks of horn, vulcanized or hard rubber, or gutta-percha, wood, or other substance, for a cutting surface, as above set forth, when the same is applied to the shanks of scissors, substantially as above described.

No. 46,029.—JOHN C. SANTEE, Hughesville, Penn.—*Bedstead Fastening.*—January 24, 1865.—This invention consists in a method of attaching the several parts of a bedstead by means of lugs, ribs, plug grooves, and flanges, dispensing with mortises, thus rendering all parts accessible for cleaning.

*Claim.*—First, the lugs C and E, constructed and applied substantially as herein shown and described, to secure the parts of the bedstead together without mortises.

Second, in combination with the above the ribs R R', for affording an additional support to the rails.

Third, the combination of the plugs K and flanges *e'*, for securing the lugs *e* within the posts, substantially as and for the purposes herein set forth.

No. 46,030.—GEORGE ESCOL SELLERS, Sellers's Landing, Ill.—*Paper Washer for Paper Stock.*—January 24, 1865.—About a central shaft is placed an inverted conical wire-gauze drainer, and within it a similar shaped perforated water vessel, a space being left between the two. The latter cone has a central tube through which the pulp is supplied to the bottom of the drainer, whilst it is itself constantly supplied by a stream of clean water, and has also at its bottom fans to act upon the diluted pulp. The drainer and the water vessel are both caused to revolve with great velocity; the action of the fans is such as to drive the pulp by centrifugal force upwards and outwards against the drainer, and thus increase its area as it rises on an increasing diameter, and so spread the pulp thinner and thinner, until it reaches the top, where it is discharged. While thus rising, the water is distributed with great force through the perforations of the water vessel into the pulp, and forced through it and out through the meshes of the wire drainer, carrying with it large portions of non-fibrous matter.

*Claim.*—Washing pulp or fibre for paper stock by submitting it to the action of a centrifugal drainer, so arranged as to permit the stuff to pass over the draining surface in a gradually thinning sheet, and to be washed by a continuous stream of water passing through it, substantially in the manner and for the purpose specified.

No. 46,031.—GEORGE ESCOL SELLERS, Sellers's Landing, Ill.—*Cane Stripper.*—January 24, 1865.—This invention consists in a cylinder filled with projecting blades or teeth. The cane is introduced between two feed rollers, and the leaves or branches are snapped off by means of the rapid motion of the teeth, as the cane is drawn through and delivered upon a table outside of the machine, while the leaves are carried under the machine.

*Claim.*—First, the stripping or breaking of the branches from the stems of cane or reeds, or stripping off the leaves only by blows struck by revolving arms, slats, or blades, the cane or reeds being so fed as to insure contact with the part to be struck off, substantially as specified.

Second, receiving the stripped cane upon an inclined table arranged with a stop to facilitate bandling, substantially as specified.

No. 46,032.—A. G. SHAVER, New Haven, Conn.—*Eraser.*—January 24, 1865.—This invention consists in forming an eraser with a file-cut surface, in combination with a cutting or scraping edge, and also providing the same with a convex burnishing surface.

*Claim.*—First, an eraser constructed with a file-cut surface, in combination with a sharp-cutting or scraping edge or edges, substantially as shown.

Second, an eraser constructed with a file-cut surface, in combination with a sharp-cutting or scraping edge or edges, and a convex burnishing surface, substantially as shown and described.

No. 46,033.—LYMAN SMITH, Erie, Penn.—*Apparatus for Extracting Oils, &c.*—January 24, 1865.—This invention consists of a trough with a perforated bottom, directly under which is a second trough. From the bottom of the latter trough a tube provided with a stopcock extends vertically downwards, and terminates in a tank. The material to be operated upon is placed in a tank A, and the lower trough and tube E are filled with water. On opening the stopcock a vacuum is formed in the trough, and the pressure of the atmosphere forces the oil or other liquid out of the material.

*Claim.*—The tank A with perforated bottom B and tank C, in combination with the tube E and receiving tank F, constructed and operating substantially as and for the purpose set forth.

No. 46,034.—HENRY C. SPAULDING, Brooklyn, N. Y.—*Metallic Cartridges.*—January 24, 1865.—To prevent galvanic or chemical action between the metallic shell and ball, to the prejudice of the powder, the shell, particularly, is coated on its inside with collodion, as a non-conductor, and the strength of the charge thus preserved.

*Claim.*—A metallic cartridge coated on its interior with a non-conducting coating, substantially as set forth.

No. 46,035.—D. C. STONE, Kingston, N. Y.—*Millstone Pick.*—January 24, 1865.—This invention relates to that class of steam pumps which are constructed of thin steel plates, and are fitted in metallic heads secured to a handle, provided with openings in said heads extending entirely through it longitudinally, and having a rack at one side, in combination with a key and a lip on the inner end of the pick blade.

*Claim.*—The head B, provided with an opening *a* extending entirely through it longitudinally, and having a rack *c* at one side, in combination with the key E and the lip *d* on the inner end of the pick blade, substantially as and for the purpose set forth.

No. 46,036.—LEVI W. TURRELL, Newburg, N. Y.—*Steam Pump*.—January 24, 1865.—This invention consists in arranging both the induction and eduction valves of the pumps upon a horizontal plate, and guiding them by means of sockets projecting downwards from such plate; also in the manner of arranging the chamber of such valves, by which they are made more accessible for repairs, or removing any obstructions that may happen to lodge therein.

*Claim*.—First, the combination of the valves  $D^1$   $D^2$   $S^1$   $S^2$ , seated upon a common plate  $M$  and guided by sockets  $d'$   $s'$  projecting downward from the cap plates, all as herein described, to facilitate the inspection and removal and replacement of the valves.

Second, in combination with the above, disposing the several chambers of the valve chest in such a way that the movement of the piston of the pump cylinder will alternately open two of the valves and close two, in the manner and for the purpose explained.

No. 46,037.—J. S. UNDERHILL, New York, N. Y.—*Vessel of War*.—January 24, 1865.—This invention consists in the use of armor plates, or plated annular turrets, arranged horizontally or nearly so, with their edges secured by bolts which pass through the plates vertically or nearly so.

*Claim*.—The combination of the horizontal plates  $a$   $a$ , vertical bolt  $b$   $b'$ , vertical plates  $d$   $d$ , and screws  $e$   $e$ , all constructed, applied, and secured in the manner and for the purposes herein specified.

No. 46,038.—CHARLES M. WETHERILL, Lafayette, Ind.—*Method of Inking Stamps*.—January 24, 1865.—This invention consists in the use of an elastic buffer composed of glue, molasses, and glycerine, with or without insoluble powders, upon which the ink is spread evenly by means of an elastic or firm roller, the ink being afterwards transferred to the stamp by pressure.

*Claim*.—The use of an elastic buffer composed of glue and molasses or glycerine, or their equivalents, with or without admixture of insoluble powders, upon which coloring matters are spread with an elastic or firm roller or by other known means, and from which the aforesaid coloring matters may be taken by the pressure of a stamp thereupon and transferred to the object to be stamped.

No. 46,039.—B. C. WHITE, Richmond, Ind.—*Fanning Mill*.—January 24, 1865.—In this invention the hopper has a hinged adjustable radially slatted or ribbed feed-board. From the rock shaft with the pitmen and connections a rotary combined with a lateral and vertical motion is given to the shoe. A loose screen receives all these motions, and an additional independent jarring motion; the height of the shoe adjustable by means of links and turning hooks. A slide running in grooves has adjustable wind boards.

*Claim*.—In combination with the feeding hopper, the hinged adjustable and radially slatted or ribbed feed board  $k$ , operating as and for the purpose substantially as set forth.

Also, the combination of the rock shaft  $d$  and its crank arms and the crank wheel  $f$ , with their several connections, to the first moving power and to the shoe, for the purpose of giving the shoe an end and side or a longitudinal and lateral motion, substantially as and for the purpose described.

Also, in combination with the shoe, the loose screen  $H$ , having a shake or jarring motion at its rear lower end, independent of but in addition to the motion it has with the shoe, substantially as described.

Also, in combination with the shoe, the adjustable wind board frame or slides, and the adjustable wind boards therein, as and for the purpose described.

Also, the hanging of the shoe by means of the wire links and turning hooks, by which it may be raised or lowered to adapt it to the blast or the character of the grain being cleaned, substantially as herein described.

No. 46,040.—WARREN WILDER, Wilkesonville, Mass.—*Shuttle for Looms*.—January 24, 1865.—The springs, both on the same side of the spindle, are so arranged that one exerts an independent pressure on the spindle-head to keep the spindle in position, while the other exerts an independent pressure on the head of the bobbin to retain it on the spindle; both are acted on simultaneously when the spindle is raised, and the bobbin is, by the act of raising, disengaged from its spring.

*Claim*.—The combination and arrangement of the springs  $d$   $g$ , when attached to the spindle-shank  $b$ , with cross-pins  $m$  for operating the same, substantially as herein described.

No. 46,041.—S. W. WOOD, Cornwall, N. Y.—*Process for Making Cast Steel*.—January 24, 1865.—This invention consists in treating pig iron in a puddling furnace in the same manner as for making wrought iron, until it takes the form of fine granular particles; it is then taken out of the furnace and allowed to cool, and is stamped and separated from the cinder by any suitable means. The decarbonized iron thus obtained is melted in a crucible with a sufficient amount of charcoal to produce steel of the desired quality.

*Claim*.—Making cast steel by melting decarbonized iron, prepared substantially as herein described, in connection or contact with charcoal, or other form of carbon, either with or without the use of black oxide, manganese, or flux, substantially as specified.

No. 46,042.—T. C. WOOD, Augusta, Mich.—*Extension Ladder*.—January 24, 1865.—This invention consists in constructing a ladder of two parts, connected by a hinge, and arranged in such a manner that the ladder may be compactly folded for transportation, or when not required for use, or be adjusted so as to serve as a short ladder, similar to an ordinary step-ladder, and also be capable of being adjusted as a long ladder, the two parts being in line with each other. With this folding ladder there can be used a removable and adjustable platform, applied in such a manner that it may be readily removed from the ladder and applied to it and adjusted as circumstances may require, to serve as a convenient stand in packing fruit.

*Claim*.—The folding ladder, composed of the two parts A B, connected together as shown, in combination with the removable and adjustable platform D, all arranged substantially as and for the purpose herein set forth.

No. 46,043.—J. P. WOODBURY, Boston, Mass.—*Street Steam Railway Cars*.—January 24, 1865.—This invention consists in certain improvements in the construction of what are known as dummy engines, or street steam railway cars, whereby they are enabled to run with ease and freedom around the shortest curves that ever occur in any streets or railway tracks.

*Claim*.—First, the combination of the boiler and engine of a locomotive with a car truck provided with a circular truck frame and anti-friction rollers, so adjusted as to be received within one end of a car, so that the truck can turn independently of the car, in the manner and for the purpose herein set forth.

Second, the combination of one end of a railway car with an independent circular locomotive car truck, when constructed in the manner and for the purpose herein described.

Third, constructing the truck I with a circular track i, provided with anti-friction rollers A, to support the forward portion of the car, and allow the truck to turn with freedom under it, substantially as described.

Fourth, the independent circular carriage of radial anti-friction rollers, to operate in combination with the top of the truck and the bottom of a railway car, substantially as described.

Fifth, connecting the car to the centre pin of the truck frame at the bottom by means of the connecting bar V, substantially as described.

Sixth, the employment of a centre pin and connecting bar to connect the top of the car with the top of the engine and boiler truck, substantially as shown in Fig. 9.

Seventh, forming the front of the passenger car concave, and the engine and boiler room convex and circular, so that the one may turn in the other, substantially as represented in Figs. 7, 8, 9, and 10.

Eighth, making the rear truck to turn on a centre pin in the rear end of the car body, in combination with the circular tracks and carriage of radial anti-friction rollers which support the car body on the truck, substantially as described.

Ninth, the anti-friction wheels m, to operate in combination with the revolving engine room and passenger car, substantially as described.

Tenth, so constructing and arranging the smoke and exhaust pipe as to pass through the top of the car, directly over the centre pin U, wherever the boiler is placed, so that when the truck frame turns on a curve, said pipe may also turn with freedom through the car top, substantially as described.

No. 46,044.—ELIJAH YOUNG, Tuscarora, N. Y.—*Grain Separator*.—January 24, 1865.—This invention consists in joining to the shute-board, by hinges, an upper screen, adjustable vertically at its rear end, and combining with this a longitudinally adjustable discharge screen.

*Claim*.—First, so constructing and arranging the sieve F that it may be elevated at its rear end sufficiently to prevent any grain from passing over that end, substantially as and for the purpose set forth.

Second, connecting the sieve E to the shute-board by means of hinges, as set forth and described.

Third, in combination with the vertically adjustable sieve E, as described, the longitudinally adjustable discharging screen C, as and for the purpose set forth.

No. 46,045.—JOSHUA E. AMBROSE, Middletown, N. Y., assignor to SARAH T. AMBROSE, Passaic, N. J.—*Coal Oil Lamp and Gas Stove*.—January 24, 1865.—This invention consists of a square sheet-iron stove, to be used with a kerosene lamp, or a gas burner, having on each side an oven for baking, &c., which is surrounded on all sides, except the outside and ends, by a flue, in which the products of combustion circulate. On the top of the stove are holes in which the cooking utensils are placed, and a pan for baking may also be placed thereon. By means of dampers the products of combustion may be prevented from circulating beneath the top, and made to pass directly out of the chimney. On one end of the stove is a boiler in which to generate steam, which is conveyed off by pipes to perform various culinary operations. Pieces of mica are let into the stove in various places to expose the light and also to give a view of the interior of the ovens.

*Claim.*—First, the use or employment of mica in the sides, bottom, and top of the ovens, for the purpose specified.

Second, in combination with the stove, constructed as described, the use or employment of the reservoir J and tubing K, for the purpose specified.

Third, the flue B, constructed as shown, for the purpose specified.

Fourth, the use or employment of the dampers E in combination with the flue B, for the purposes set forth.

Fifth, combining with a stove, provided with the side ovens C, the flue B, for the purpose specified.

No. 46,046.—GEORGE N. BOLLES, assignor to S. W. WALKER & Co., Kalamazoo, Mich.—*Wringing Machine.*—January 24, 1865.—This invention is explained by the claims and engraving.

*Claim.*—First, the two frames A A', provided with rollers C C, and connected together by the joints B B as shown, in connection with the elastic bar E, spring F, and set screw G, all arranged substantially as and for the purpose specified.

Second, the gearing c c d d, in combination with the two frames A A' and rollers C C, substantially as and for the purpose set forth.

No. 46,047.—D. B. CLEMENTS, assignor to himself and D. H. NASH, Brooklyn, N. Y.—*Horse Hay-fork.*—January 24, 1865.—This invention consists in the arrangement of a link which connects the elevating fork with the hoisting mechanism, and is provided with a latch, by which it is held in position, in connection with a metallic stock or handle. A tooth is fitted to swing over the tines so as to hold the hay in place upon the tines.

*Claim.*—First, the arrangement of the link c connecting the hay-elevating fork with the hoisting mechanism, and provided with the latch 2, in combination with the metallic stock or handle, as specified.

Second, the tooth i, fitted to swing over the tines for holding the hay in its place on said tines, as specified.

No. 46,048.—LEMUEL S. FITHIAN, Absecum, N. J., assignor to himself and JOHN YOUNG, Joliet, Ill.—*Machine for Pulverizing the Soil.*—January 24, 1865.—This invention consists in making the cutting blades in sections, which are placed obliquely to the line of the shaft, and are so arranged that the edges of the blades are further from the shaft than the back, which prevents the friction from the uncut earth as the machine is rotated and moved forward.

*Claim.*—First, constructing the rotary pulverizer in sections, the cutters M of which coincide with frustums of a cone or cones, substantially as and for the purpose specified.

Second, giving the cutters M a raking position, and also an oblique position on the heads L', substantially as and for the purpose set forth.

No. 46,049.—LEVY J. HENRY, assignor to JOSEPH BEURIME, San Francisco, Cal.—*Mode of Protecting the Surfaces of Wooden Piles.*—January 24, 1865.—This invention consists in applying to the surface of a wooden pile a coating of asphaltum, or similar material, and, while said asphaltum is still hot, sprinkling upon it sand, gravel, or earth, and then applying another coating of asphaltum, and so on until the whole is sufficiently coated. The pile may be also covered with a coating of felt, or other material, upon which the alternate layers of asphalt and sand may be applied.

*Claim.*—The use of alternate layers of asphaltum and sand or earth, applied to piles and other articles exposed to the action of marine insects or worms, for the purposes specified.

Also, coating or protecting piles and other articles from the action of salt water by means of asphalt applied upon sheets of felt or other material attached to said articles, in the manner and for the purposes specified.

No. 46,050.—ENOS T. HIGHAM, assignor to himself and D. HIGHAM, Philadelphia, Penn.—*Window Shade Adjuster.*—January 24, 1865.—This invention consists of a grooved screw, a nut being adapted to the same, a sliding bar, and a knob for receiving the cord of the window shade; the whole being arranged so that the cord may be under the control of the screw and nut.

*Claim.*—The grooved screw A and h, bar e, and the knob f, or its equivalent, the whole being arranged and operating as and for the purpose herein set forth.

No. 46,051.—P. C. INGERSOLL, assignor to himself and HORACE F. DOUGHERTY, Greenpoint, N. Y.—*Press.*—January 24, 1865.—The object of this invention is to facilitate the introduction of the material to be pressed into the top of the press-box, which has a follower that is operated by a screw; also to prevent the canting of the follower in the act of pressing from injuring the screw which is employed to operate said follower, and at the same time provide for elevating the follower after the pressing operation in a horizontal plane or in such manner that it shall bind or wedge itself against the sides of the press-box.

*Claim.*—First, elevating and depressing the follower by means of a screw shaft having its lower end fitted loosely to the follower, combined with suspension rods g g, substantially as described.

Second, the combination of the loosely-fitting yoke K, screw shaft F, and suspension rods g g, with a follower, substantially as described.

Third, providing for opening the upper end of the press-box by the employment of a laterally sliding follower, applied and operating substantially as described.

Fourth, the laterally sliding screw support or bridge beam E E', in combination with the follower G G' and supporting bars a a, substantially as described.

Fifth, the friction rollers b b, and bridge beams E E', in combination with the holding down beams a a, substantially as described.

Sixth, the stops i i or their equivalents, in combination with the laterally adjustable bridge beams E E', substantially as described.

No. 46,052.—PETER W. KINISKEN, assignor to himself and JARED G. SCOTT, Monee, Ill.—*Field Fence*.—January 24, 1865.—In this invention the adjoining ends of the boards are notched and secured, so that they will fit and lock together in two positions, forming at will a straight or worm fence.

*Claim*.—A portable fence, with the adjoining ends of the boards recessed and notched in the particular manner herein shown and described, so that they will fit and lock together in either position, to produce at will a straight or a worm fence as specified.

No. 46,053.—ELIAKIM MARS, assignor to himself and AUGUSTUS MARSH, Newark, N. J.—*Lamp*.—January 24, 1865.—This invention consists in the mode of attaching the deflector, button, and wick tube, so as to hold the respective parts firmly in place.

*Claim*.—Attaching together the deflectors b and the button f in the manner herein above specified.

No. 46,054.—CHARLES E. SNIDER, assignor to himself and THOMAS POULTNEY, Baltimore, Md.—*Method of Converting Muzzle into Breech loading Fire-arms*.—January 24, 1865.—This invention is intended to convert easily single or double barrelled muzzle-loading arms into breech loaders, and consists in providing means for tilting and locking the barrels, through a lug-bar screwed to the barrel or barrels and the lever trigger guard.

*Claim*.—First, the lug-bar C attached to the barrel by screws c c c, and provided with projections D D' for the pivoting of the bar E; and lever L, to the barrel, in the manner and for the purposes set forth.

Second, the pivoted bar E, constructed and employed as described, for the attachment of the breech G of a double or single barrelled gun for converting the same to a breech loader, the said bar being provided with a projection E' at its rear end, and an abutment E'', fitting the inclined back of the projection I on the lug-bar C, so as to constitute, in combination with the said lug-bar, a rigid connection between the breech and barrel, while in position for firing, as explained.

No. 46,055.—JAMES WARD, assignor to himself and GARRETT A. LANS, Boston, Mass.—*Brick Machine*.—January 24, 1865.—This invention consists in a revolving mould carriage, provided with moulds and plungers to co-operate with a pair of pulverizing or preparing rollers, arranged within a box, the whole combined and arranged with adjustable scrapers, an auxiliary roller, an annular rail, a series of friction rollers, and lifters with their cams.

*Claim*.—The combination and arrangement of the two adjustable scrapers K L, with the preparing rollers G H, the case E, and the mould carriage A.

Also, the combination of the auxiliary roller I, its chamber N, and its adjustable scraper M, with the mould carriage A, the rollers G H, the case E, and the scrapers K L, arranged together and within the case E, substantially as specified.

Also, the arrangement of the mould wheel A, the case E, the shaft h, the roller I, the chamber N, and the mechanism for operating the rollers G H, and the mould carriage A.

Also, the combination and arrangement of the annular rail d, and the series of friction rollers e, with the mould carriage and the series of plungers thereof.

Also, the combination and arrangement of the series of lifters c and their cams B C D with the rotary mould carriage A, the rail d, and the series of friction wheels c.

No. 46,056.—E. R. HOLLANDS, Northampton Square, England.—*Machine for Punching Metal*.—January 24, 1865.—In this apparatus the punch is forced down upon the metal by the joint action of two friction rollers, which are forced between an inclined plane formed on the upper end of the punch, and another inclined, though stationary, plane formed in the framework of the machine, and a wedge-shaped bar, which is forced endwise between the two rollers. The movements of the rollers and wedge are simultaneous, though with different velocities, and are effected by screw-threads of varying pitch, cut on different portions of the shank of the wedge-bar.

*Claim*.—The combination of the tool holder with the movable wedge, the mechanism for moving it, the rollers and the inclines, or their equivalents, operating substantially as hereinbefore set forth.

No. 46,057.—JULES O. METHIEU, Paris, France.—*Machine for Making Cords, Ropes, &c.* Patented in France February 12, 1863.—The object of this invention is to spin and wind yarn, cords, or ropes of any size, and to lay the strands with any required strain or tension.

*Claim.*—The arrangement of the flyer and bobbins or spools with their described intermediary connecting and operating parts, when constructed, arranged, and operating as and for the purpose herein described and represented.

No. 46,058.—EDWARD PAYNE, London, England.—*Apparatus for Measuring and Testing Spirits and other Distillates.*—January 24, 1865.—This invention consists of a frame containing the tanks, which are placed on a vibrating yoke. The distilled spirit passes first into one of the tanks, and when it has filled the said tank causes it to overbalance the empty one, when it is in turn filled, the first one being emptied automatically at the same time. The tanks are thus filled and emptied alternately; the number of times each is filled and emptied being recorded upon the dials by means of suitable mechanism. As the spirit passes through the tunnel into the tank a small quantity is retained in the sampling device, and caused to flow into the receivers. The sampling device consists of a tube, provided with valves, supported by a suitable mechanism, the valves being so arranged that at each oscillation of the tanks they will allow the sample contained in the tube to pass into the chamber and from thence into the receiver.

*Claim.*—In connection with a still or distillery, the combined use in one instrument of a measuring and of a sampling apparatus, substantially as herein described, whereby small quantities of the spirit that passes over or through the apparatus are retained for an after test of its proof, and beyond the reach of the operator, while the measured bulk or quantity passes through to any common receiver.

No. 46,059.—G. A. TREMESCHINI, Vicenza, Austria.—*Lamp.*—January 24, 1865.—This invention consists in the combination and arrangement of the copper cone and interior deflector in such a manner in relation to each other and to the outer disk, as to admit the air and highly heat it before it reaches the flame; also in the combination of three or more wicks with and within a movable tube, moving within an outer stationary tube, leaving an intervening air space; also in the mode of fitting the burner to the reservoir, and of filling the latter with oil.

*Claim.*—First, the arrangement of the copper cone A, and deflector T2, in relation to each other and to the disk Q, and its air openings T, for the purpose of admitting air from below the disk, deflecting it against the copper cone to be highly heated, and thence carried to supply combustion at the slot, at its upper end, as described.

Also, the arranging of the wicks *b f g* within a tube E, that is movable within an outer stationary tube B, and an intervening air space between them, as and for the purpose described.

Also, securing the beads of the lamp to the bowl by means of a conical shank on the former, and a conical socket on the latter, the two making a tight metallic ground joint, substantially as described.

Also, filling the lamp through an opening in the side of the neck thereof, by means of an instrument substantially such as described, that will flow off the excess of burning fluid beyond a given height, as described and represented.

No. 46,060.—HENRY LOEWENBERG, New York, N. Y., assignor to himself and EMILE GRANIER, Paris, France.—*Composition for Lining Barrels for holding Petroleum.*—January 31, 1865; antedated December 10, 1864.—This invention consists of a composition of glue, acetic acid, glycerine, and nut-gall.

*Claim.*—A substitute for India-rubber or composition, made of the ingredients herein specified, and mixed together in about the proportion and substantially in the manner set forth.

No. 46,061.—WILLIAM ADAMSON, Philadelphia, Penn.—*Mode of Economizing the Manufacture of Articles of Leather.*—January 31, 1865; antedated December 29, 1864.—This invention consists in cutting from raw or untanned hides or skins, or parts of the same, pieces of about the size and form required for useful articles of tanned leather, and tanning the said pieces after they have been cut from the raw or untanned hides. It also consists in economizing the manufacture of the sole and heel pieces, and other useful articles of leather, by a saving of time, labor, and material in tanning, and by retaining the remnants, after cutting the articles from the skin, in a condition which renders them marketable.

*Claim.*—Cutting from raw or untanned hides or skins, or parts of the same, pieces of the size or about the size and form required for useful articles of tanned leather, and tanning the said pieces after they have been thus cut from the raw or untanned hides, as and for the purpose herein set forth.

No. 46,062.—LOUIS PAUL ANGENARD, New York, N. Y.—*Process for Making Looking-glass.*—January 31, 1865.—This invention consists in applying bichloride of platinum, dissolved in alcohol, to the glass with a brush; after which, the glass is placed in a muffle or

oven and baked until it becomes a cherry color. It is then allowed to cool before coming in contact with the atmosphere.

*Claim.*—The chemical proportions and preparation of the solution and its application to plate glass and other kinds of glass.

No. 46,063.—ELLIS S. ARCHER, New York, N. Y.—*Manufacture of Argand Burners.*—January 31, 1865.—The tip or perforated ring, as heretofore made, is dispensed with by this method of manufacture; one part of the burner being spun or stamped from sheet-brass so as to fit the casting, and the other part being turned to a gauge so as to fit exactly inside the first: the edge of the first is then spun tightly over the edge of the second.

*Claim.*—The making of an argand burner in the manner described, thus dispensing with the tip or perforated ring, as heretofore made.

No. 46,064.—JOSEPH W. BARTLET, New York, N. Y.—*Sewing Machines.*—January 31, 1865.—In this machine the rocking looper shaft receives its backward sliding motion from an adjustable cam on its rear end, whence it is returned by a spring. The adjustable sleeve on this shaft, with its projection, operates and varies the feed. There is also provision for an upper feed, by means of the presser foot and its connections.

*Claim.*—First, the combined sliding and rocking movement of the looper or under needle rod or shaft *i*, when arranged and actuated substantially as set forth.

Second, the adjustable sleeve or lever *o*, when constructed and operated as and for the purposes set forth.

Third, the sliding and rocking looper or under needle rod or shaft *i*, the adjustable sleeve or lever *o*, the cam or lever *u*, and pin or projection *z*, when combined substantially as set forth.

Fourth, the sliding or rocking looper or under needle rod or shaft *i*, the cam or lever *u*, pin or projection *z*, and feed bar *s*, when combined substantially as set forth.

Fifth, the presser foot *e*, cam *z*, (as shown and described in Fig. 7, sheet 2,) and sliding and rocking rod or shaft *i*, when combined substantially as set forth.

No. 46,065.—SAMUEL BAXENDALE, South Malden, Mass.—*Machine for Surface Sizing Wadding, &c.*—January 31, 1865.—In this machine the upper reticulated metallic apron is so situated as to exert a pressure upon the sized bat as it passes over the cylinder for the purpose of producing the adhesion of the fibres by means of the sizing. The blast pipe is for the purpose of detaching the bat from the apron. The other features are sufficiently explained by the claim.

*Claim.*—First, the combination of the rotary cylinder *F*, having pin points or other rigid projections on its periphery, with the rotary brush *D*, or its equivalent, from which the pins or projections of the said cylinder receive the sizing to sprinkle it upon the bat or web by centrifugal force, substantially as herein specified.

Second, the deflector *I*, in combination with the cylinder *F*, substantially as and for the purpose herein described.

Third, the reticulated or perforated metallic endless aprons *E E'*, in combination with a device for sprinkling the sizing upon the bat or web, substantially as and for the purpose herein set forth.

Fourth, the employment, in combination with two perforated or reticulated endless metallic aprons *E E'*, operating together as herein described, of a blast pipe *M*, or other equivalent device, for delivering a blast of air applied within one of said aprons, substantially as and for the purpose herein set forth.

No. 46,066.—THEODORE BERGNER, Philadelphia, Penn.—*Instrument for Cutting Photographs.*—January 31, 1865.—This invention consists of a die-punch, worked by a lever from below two metal plates, perforated in the form required for the photograph, the photograph being placed between the plates with the face upwards.

*Claim.*—The described instrument for cutting out photographs, with its punch *A*, die *B*, and guide plate *C*, operated as set forth, and are relatively so arranged as to facilitate accurate adjustment of the picture to be cut out, substantially as specified.

Also, in combination with the described instrument, the use of gauges *b* and *c*, substantially as and for the purpose specified.

No. 46,067.—ALPHEUS P. BLAKE, Milton, Mass.—*Centrifugal Ventilator.*—January 31, 1865.—This invention consists of a revolving ventilator for chimney tops, revolving on an axis, set at one end in an iron rod, bent over the apparatus, and fastened at the ends to the chimney, and another in a step in a frame in the chimney. In the upper part of the ventilator are V-shaped rings, attached to the top and second plates, which, being acted on by the wind, cause the ventilator to revolve. The top and second plates are closed. The edge of the second extends beyond the circle in which the wings are placed, and from this point incline towards the chimney at a small angle. Under this plate is a third, nearly parallel with an orifice in the centre, of corresponding size, with an exit pipe. The smoke passes out through the exit pipe and the said orifice and between the two plates. There are several

vertical partitions between the plates, extending from the outer edges of the plates to the edge of the orifice in the lower plate.

*Claim.*—First, the arrangement of the fans or blowers of the exhaust wheel.

Second, encasing the fans or blowers at the top and bottom.

Third, the combination and arrangement of the fans, disk, and wheel, as shown in section No. 2, all of which substantially as described and for the purpose set forth.

No. 46,068.—ISAAC W. BOWERS, Ovid Centre, Mich.—*Stave Machines.*—January 31, 1865.—The object of this invention is to slice and at the same time saw the staves to the exact length, and consists in a machine for slicing staves from a block, by attaching two adjustable circular saws, which, as soon as the stave is sliced off, the saws will cut to the desired length, it being held in place by two circular springs until the next succeeding stave is cut.

*Claim.*—The combination of the saws H H and springs M M, applied to a stave-cutting machine, to operate in the manner substantially as and for the purpose herein set forth.

No. 46,069.—BARCLAY BROWN, Byberry, Penn.—*Apparatus for Evaporating Saccharine Liquids.*—January 31, 1865.—This invention consists in so arranging the sectional grates, on wheels or on endless bands, that each section can be readily withdrawn from the furnace without removing the other grates, and also in placing the sections on hooks, so that they may be raised or lowered, and thus be made to approach or recede from the evaporating pan, the hooks being operated by means of levers and rods.

*Claim.*—First, a grate made in sections, which can be moved both in a horizontal and in a vertical direction, substantially as and for the purpose described.

Second, the hook frames D D' D'' and levers E E' E'', arranged with sectional grates C C' C'' and handles F F' F'', or their equivalents, in the manner and for the purpose substantially as set forth.

No. 46,070.—WILLIAM E. BROWN, Boston, Mass.—*Portable Granulating Coal Sifter.*—January 31, 1865.—This device is composed of three sieves, arranged one above the other, and all inclined sufficiently to insure the charge rolling down from them. The upper and lower sieves incline the same way, and the ashes or other fine substance that pass through them fall directly into a receptacle beneath. The middle sieve is inclined in a direction opposite to that of the other two, and the charge falls upon the lower sieve and from thence into another receptacle. Under the middle sieve is a close shelf, which prevents the ashes from falling directly down. This shelf has the form of a double incline, so that the ashes are turned aside and conducted into the ashes receptacle.

*Claim.*—The combination with a series of inclined sieves or screws of one or more deflectors, composed of inclined surfaces, throwing the ashes out of the path of the sifted coal into the ash-box, substantially as herein described.

No. 46,071.—GEORGE R. BURDON, Waltham, Mass.—*Adhesive Fastening for Papers.*—January 31, 1865.—This invention consists in providing pieces of leather or cloth coated on one side with mucilage, and cut in such a form as to interlock when two are placed opposite to each other on loose sheets of paper, where they may be permanently fastened by an ordinary pin.

*Claim.*—Locking or joining together loose sheets or pieces of paper by means of a hinged binding, composed of pieces of leather or cloth, united by means of a pin, or locked into each other, as set forth.

No. 46,072.—WILLIAM BURNET, Providence, R. I.—*Newspaper File.*—January 31, 1865.—This invention consists of a rod enclosed in the grooved side of a cylinder, where it is held by a spiral spring at one end and a conical plug on the other end.

*Claim.*—The single rod, with a longitudinal groove or recess to receive the back of the folded sheets—the cord or wire shutting into the groove, and attached at one end to the spiral spring contained in the handle, and the other attached to the conical-shaped knot fitting the counter sink in the top of the rod, all made and operating substantially as set forth, or their mechanical equivalents.

No. 46,073.—JOHN H. BURNS, Clinton Station, N. J.—*Pumps.*—January 31, 1865.—This invention consists of two horizontal cylinders, forming an obtuse angle; in this angle a crank revolves, the shaft of which is stepped below, and ascends vertically to a pinion and gearing. This crank operates two piston rods, one moving in each of the horizontal cylinders, carrying a globular plunger, at its extremity. The water is admitted into the remote end of each of the horizontal cylinders, where there is a valve, and is forced up one of the legs of a siphon-shaped pipe and thence through an eduction pipe, into which both currents enter and form a continuous flow. The pinion above may be operated through appropriate gearing by any desired power.

*Claim.*—First, the barrels A A', arranged at angles as described, in combination with the vertical crank shaft E and common ascension pipe J, constructed and operated as and for the purpose herein shown and described.

Second, the spherical plungers B in combination with the barrels A A' of the pump, and with the crank shaft E, and operating substantially as and for the purpose set forth.

No. 46,074.—STEPHEN DECATUR CARPENTER, Madison, Wis.—*Construction of Gun-boats*.—January 31, 1865.—This invention consists in constructing gunboats and other vessels of war with a flat deck, and with sides which narrow in from the deck downwards to below the water line, and plating the deck and sides with defensive armor.

*Claim*.—The manner of constructing the portion of gunboats or war vessels exposed to shot, shell, or other projectiles with outward projecting angles for the sides and ends, in combination with the level deck, substantially as herein described and for the purposes set forth in the specification.

No. 46,075.—JONATHAN CARTER, Winchendon, Mass.—*Painting Pails*.—January 31, 1865.—This invention consists of a roller with elastic ornaments on its surface, mounted on a proper handle. The sides of the roller are made to flare in the same degree as the pails to be ornamented, so that by running the tools on a pail the lines of ornament are kept parallel with the edges.

*Claim*.—The conical die roll, when constructed in the manner and for the purposes substantially as set forth and described.

No. 46,076.—D. H. CHAMBERLAIN, West Roxbury, Mass.—*Hand Stamp for Printing*.—January 31, 1865.—This invention consists in placing a slot in the end of a lever bar, to facilitate the adjustment and removal of changeable dies.

*Claim*.—Bifurcating the outer end of the lever C so as to admit of the type block E being readily removed and replaced, in the manner substantially as set forth.

No. 46,077.—WILLIAM CHESLEY, Cincinnati, Ohio.—*Valve Cocks*.—January 31, 1865.—In this device the hub screws down within the faucet, and a cap is screwed upon its upper end. The lower part of this hub has a central recess. When the hub is screwed up, so as to be nearly withdrawn, the screw portion of the valve stem is below the female screw of the hub, and the smooth portion of the valve revolves in and is guided by the hub during the process of guiding the valve in its seat.

*Claim*.—So constructing the boss G and the hub H I as to liberate the valve screw stem for regrinding, by simply screwing back said hub, which thereby becomes a fixed guide for the smooth portion of said stem, substantially as set forth.

No. 46,078.—JAMES A. CLARK, New York, N. Y.—*Machine for Washing Wool*.—January 31, 1865.—In this machine the wool is conveyed into and out of the trough by endless aprons, and passed through the same between two other endless aprons, under one of which is a bed of rollers, and over the upper of which a series of vertical beaters or stampers is arranged, one above each roller. These stampers are successively operated by a revolving shaft having thereon a set of lifters, spirally arranged. An inclined shelf under the rollers carries off the dirt as it is washed from the wool into an adjoining compartment, preventing its falling upon the lower portion of the lower apron. Provision is also made for picking the wool as discharged by means of a revolving cylinder with radially advancing and receding teeth in conjunction with a set of stationary teeth.

*Claim*.—The combination of the apparatus described, for conveying the wool, &c., through the reservoir, with the apparatus for washing the same, consisting of the stamps, constructed as described, acting on a roller bed or its equivalent, as and for the purposes herein set forth.

No. 46,079.—CHARLES CLEMINSHAW, Troy, N. Y.—*Filters*.—January 31, 1865.—The bottom of a close vessel being perforated, a canvas is extended thereon, by means of a hoop, which packs tightly at the sides. Sand or other suitable medium is poured thereon, and the liquid is then admitted or forced in through a pipe near the top of the vessel.

*Claim*.—The combination of the packing ring c with the close vessel A, filtering medium B, pipe C, screw b, and perforations a, arranged and operating as and for the purposes specified.

No. 46,080.—JOHN F. CLEU, New York, N. Y.—*Valve for Submarine Ordnance*.—January 31, 1865.—The plug, which is screwed into the wall of the gun, is composed of three parts, one screwing over and on top of each other. Between these there are two valves, which secure a vacuum in the bore of the gun after the air pump has been applied; other openings, such as muzzle and touch-hole, having been properly secured. A check-valve or rotating gate at the bottom of the plug secures the two upper valves from injury on the explosion of the charge.

*Claim*.—First, the plug B provided with one or more valves C C' and a cap E, for the purpose of protecting said valves and excluding air from an exhausted cannon.

Second, the check valve C2, employed substantially as described, to protect the aperture b and valves C C' from the expansive pressure of the gases within the gun.

No. 46,061.—ALEXANDER COCHARD, Port Richmond, N. Y.—*Beverage*.—January 31, 1865.—This invention consists of a mixture of sugar, vinegar, raisins, coriander seeds, and hops, to which may be added rock candy, orange peel, citric acid, and a weak infusion of peppermint. The mixture is put into a barrel, and enough water added to make thirty gallons, and the whole is stirred several times a day for four or five days. It is then strained and clarified, and put into bottles.

*Claim*.—The beverage prepared of the ingredients and in the manner specified.

No. 46,082.—G. F. J. COLBURN, Newark, N. J.—*Combs*.—January 31, 1865.—This invention consists in constructing the comb with a metallic back, so that the comb proper can be removed from the back in which it is fastened by a lip and a clamp screw. The metallic back which encloses the comb shuts into a handle of the same material.

*Claim*.—First, the combination of a movable metallic back with a comb, substantially as described, so that the comb can be readily taken out and replaced without injury to the said back.

Second, the use of a socket in one end of the metal back of a comb, in combination with a lip projecting from the end of the same, and with a clamp screw or other suitable fastening at the opposite end, substantially as and for the purpose specified.

Third, the combination of the metallic back of a comb with a handle or case of similar material, and fitting the same together, substantially as and for the purpose described.

Fourth, so constructing a comb that the comb part proper and the back may be readily detached, substantially as described.

No. 46,083.—PETER CONRAD, Dorchester, Ill.—*Combined Roller and Corn Planter*.—January 31, 1865.—This invention consists in the combination of a roller with a corn-planting device in such a manner that the two devices will operate together.

*Claim*.—The bar R, provided with the horizontal wheel S, and arranged substantially as shown, in combination with the roller B for the purpose herein set forth.

Also, in combination with the bar R, wheel S, and roller B, a corn-planting device, substantially as set forth.

No. 46,084.—MOSES G. CRANE, Chelsea, Mass.—*Hot-air Engines*.—January 31, 1865.—This invention consists in so arranging the main cylinder, the air pump, the air passages, and exhaust valve, that the pressure shall be the same upon both sides of the pump piston during the entire movement; this object being effected by means of pipes which connect the top and bottom of the pump with the top and bottom of the air-heating vessels. The air-pump piston is so arranged that it will complete its stroke before the completion of the stroke of the main cylinder piston, which is consequent upon the stroke of the air pump so completed.

*Claim*.—In hot-air engines the arrangement of the main cylinder, the air pump, the furnace, the air passages, and exhaust valve, so that the air-pump piston shall work with equal pressure on each side thereof, substantially as set forth.

Also, the employment of the valve *o*, in the pump piston, in connection with the regulator valve in the passage between the pump and furnace, when arranged to operate substantially as specified.

Also, so operating the pump piston in the stroke which supplies the main cylinder that said piston completes its stroke before the main cylinder piston completes the stroke which is consequent upon said supply.

No. 46,085.—JOHN DANNER, Canton, Ohio.—*Tub for Washing and other purposes*.—January 31, 1865.—The invention is fully set forth by the claim.

*Claim*.—In combination with a washing tub composed of staves of wood, a metallic bottom, constructed and united thereto, in the manner substantially and for the purposes described.

No. 46,086.—SAMUEL DERR, Lockhaven, Penn.—*Stump Extractors*.—January 31, 1865.—The object of this invention is to obviate the inconvenience of drawing a large stump machine among stumps standing thickly, and through ordinary gateways and lanes; also that of using such machine for the purpose of extracting small stumps, whereby trouble occurs in passing round them, and also on account of the distance the driving power has to move to produce the required result.

*Claim*.—The arrangement of the legs B B B B under the frame A, so that they may occupy more or less breadth of space, substantially as and for the purposes herein specified.

Also, in combination with the above, the arrangement of the cross braces M M M M and tension rods P P, so as to adapt them to the variations in the position of the legs B B B B, substantially as herein set forth.

No. 46,087.—WILLIAM DISBROW, San Francisco, Cal.—*Horseshoes*.—January 31, 1865.—This invention consists in constructing a shoe of two plates or parts, the upper one being hinged at the toe and, by means of a jointed cross-bar, at the heel, and having attached to

each part, at the toe and heel, plates projecting upwards and inwards of a curve to fit the outer surface of the hoof, which is inserted within them before they are closed upon it. By then screwing to this hinged plate the lower part or shoe proper, the former is made rigid, and caused to hold securely to the hoof.

*Claim.*—A horseshoe composed of the parts A A and G, the former being connected by a hinge B at their front ends, and provided with the pieces D D and heel plates E E, the latter having oblique plates F F, which enter notches or grooves made in the sides of the hoof, and the part G, secured to the parts A A by screws, the whole being constructed, combined, and arranged, either with or without the leather or other material K, substantially as and for the purpose herein shown and described.

No. 46,088.—GEORGE H. S. DUFFUS, New Orleans, La.—*Retorts for Distilling Petroleum.*—January 31, 1865.—This invention consists in making the bottom of a retort dome-shaped in its interior for distilling petroleum.

*Claim.*—In stills for rectifying petroleum and other oils, or producing illuminating or other oils or gases from any substances capable of treatment by heat, making the bottom of the retort with a dome or its equivalent rising therefrom up within its interior, substantially as described.

No. 46,089.—GEORGE H. S. DUFFUS, New Orleans, La.—*Retorts for Distilling Petroleum.*—January 31, 1865.—This invention consists of a short-cylindrical box, having the top and bottom perforated with holes. These holes are directly opposite each other, and are connected by short tubes, forming passages through the box for air. These tubes are made of some porous mineral substance, so that they may be pervious to gas, which flows through the walls of the tube and mixes with the air, and ascends with it to the upper part of the tube, where it is ignited. The box is supplied with gas by a pipe, and is made adjustable, so as to be moved to or from the retort, as may be required.

*Claim.*—First, in stills for rectifying petroleum, or in which oils, coal, or other substances are treated by heat, arranging the furnace or burner by which the heat is communicated or created, so that it and the flames or incandescent fuel can be moved near to or further away from the retort, according to the condition of the work, substantially as described.

Second, the burner or furnace I, constructed substantially as described.

Third, the combination of the pervious cones with the gas pipe *h* and the perforated plates *i* and *j*, or their equivalents, substantially as described.

No. 46,090.—GEO. H. S. DUFFUS, New Orleans, La.—*Retorts for Distilling Petroleum.*—January 31, 1865.—This invention consists in surrounding the still with a jacket of some non-conducting composition, such as plaster of Paris and wood ashes, and also in the use of steam for the purpose of cleaning the retort.

*Claim.*—First, in stills for rectifying petroleum and other oils or producing illuminating or other oils or gases from any substances capable of treatment by heat, covering the still with a jacket, enclosing or composed of non-conducting materials, substantially as described.

Second, the use in stills for rectifying petroleum and other oils, or for producing illuminating or other oils or gases from any substances capable of treatment by heat of steam, for the purpose of cleaning the retort, substantially as described.

No. 46,091.—HENRY W. EASTMAN, Baltimore, Md.—*Crib and Cradle.*—January 31, 1865.—This invention consists in the combination of the several devices forming a folding crib, cradle, or trundle bed, also the attachment thereto of frames for stretching a mosquito bar.

*Claim.*—The combination and arrangement of the hinged sides N N, rockers M M, bolts and thumb nuts L, hooks K, and metallic frame O, all constructed and arranged substantially as and for the purpose set forth and described.

No. 46,092.—A. H. EMERY, New York, N. Y.—*Obtaining Spirits of Turpentine, Oil, Rosin, and other products, from Pine Wood.*—January 31, 1865.—This invention consists in using steam under pressure to extract the resinous and other matter from pine wood.

*Claim.*—First, passing a current of ordinary steam over and through the wood into a condenser in the manufacture of spirits of turpentine, rosin, &c., from pine wood.

Second, in the manufacture of turpentine, rosin, &c., directly from pine wood, subjecting the steam, either ordinary or superheated, to a pressure while it is in retort, and passing therefrom into a condenser.

No. 46,093.—FELIX J. EMERY, Springfield, Ill.—*Eaves Troughs.*—January 31, 1865.—This invention consists in bending one end of the sections out of which the trough is formed, so as to form a deep narrow groove, into which the straight end of the succeeding section is forced, a packing formed of India-rubber, enclosing a stout wire, being first inserted in said groove to add stiffness, and render the joint tight. The sections are then secured together by screws or rivets.

*Claim.*—The eaves trough above described, as a new article of manufacture.

No. 46,094.—SAMUEL EMLIN, Philadelphia, Penn.—*Street-sweeping Machine.*—January 31, 1865.—This invention consists in attaching a brush to a vehicle, so that the brush is vibrated

by the wheels in their progress along the street. During this vibration, it also receives other motion, which tends more efficiently to cleanse the way and insure the greater durability of certain portions of the machine, and, at the same time, to avoid the dispersion of dust.

*Claim.*—First, the vibrating brush, having a rising and falling motion, as hereinbefore set forth.

Second, the mode of driving the said brush by means of the pinions and ratchets upon the crank shaft.

Third, jarring the brush at the extremes of its vibrations, as herein set forth and described.

Fourth, so proportioning the gearing of the machine to the diameter of the wheels and length of the brush that the same surface shall be repeatedly swept, substantially in the manner herein set forth and described.

Fifth, combining the aprons upon the flanks of the machine with a vibrating brush, having lifting and jarring motions, as described.

Sixth, attaching the brush to the vibrating beam or arm by means of springs, in the mode and with the effect described.

Seventh, the device for lifting the brush from the street pavement by the hand of the attendant without stopping the motion of the machine when said brush is vibrated and operated, substantially in the manner hereinbefore set forth and described.

No. 46, 095.—CHARLES O. FARCIOT, Philadelphia, Penn.—*Canteen Plates, Cup and Funnel.*—January 31, 1865.—This invention consists in combining with a canteen one or two plates, leaving spaces between the canteen and plates for food, and also providing a funnel which secures the dishes in position, and is also useful for filling the canteen, and as a drinking cup.

*Claim.*—First, the combination of the valve E with the canteen G, when constructed in the manner hereinbefore specified and shown in the drawings hereto annexed.

Second, combining with the canteen G the plates H and H', so as to form cavities for containing provisions between the said plates and canteen body, the funnel A, and bag or cover B, in the manner and for the purposes hereinbefore set forth and specified.

No. 46, 096.—J. ALBERT ESHLEMAN, Philadelphia, Penn.—*Neck-tie Holders.*—January 31, 1865.—This invention consists in the employment of a plate so formed as to press its two extremities within the fold of the collar near the front button, and to carry a coiled spring on its inner side below the button, which spring passes over the bottom, and making a purchase thereon, the neck-tie passes once around the centre part of this plate, between it and the spring loop, to be tied in front.

*Claim.*—The plate or holder A, arranged for the reception and removal of a ribbon or tie passing around the central part of the plate, and between it and the spring, and for confinement to the collar, all as set forth.

No. 46, 097.—FRED. W. FIEDNER, New York, N. Y.—*Manufacture of Boxes.*—January 31, 1865.—This invention consists in using veneers of wood cemented together across the grain, as a cheap substitute for pasteboard.

*Claim.*—The use in the manufacture of boxes of sheets of wood prepared substantially as described, as substitute for the sheets of pasteboard now used in the manufacture of paper boxes.

No. 46, 098.—ARTHUR FOLSOM, New York, N. Y.—*Coffer Dam.*—January 31, 1865.—In the ordinary method of making coffer-dams, two or more rows of piles properly hooped and shod with iron, are driven around the site of the proposed work a sufficient distance apart to admit the bracing requisite for strength, and to provide space for a quantity of clay or other puddling material for the prevention of leakage. When the coffer-dam thus constructed is of large size, the bracing of the sides thus exposed over their entire length to a pressure that cannot otherwise be adequately provided for, on account of the inconvenience and sometimes the impossibility of admitting anything within the interior line of piles for that purpose, involves an expense in construction which has often been greater than the cost of material and labor. The object of this invention is to provide a coffer-dam that is free to a great extent from these objections, and it consists in making it of wrought or sheet iron, stiffened and strengthened to the degree required by means of corrugations or angle iron ribs, and provided with appliances for adapting it to the irregularities of the bottom upon which it may be used.

*Claim.*—The coffer-dam, constructed and operated substantially in the manner described.

No. 46, 099.—L. A. FOULLEY, Boston, Mass.—*Apparatus for Cutting Photographs.*—January 3, 1865.—This invention consists in enclosing the pattern commonly used in cutting photographs in a frame hinged on one side, and clamped or hooked on the other, so that the paper and pattern are immovably held together.

*Claim.*—The apparatus herein described for cutting photographic pictures, passe-partout frames, &c., arranged and operating substantially as described.

No. 56,100.—H. E. GIBBON, of Brooklyn, N. Y.—*Safety Guard for the Hammers of Fire-arms*.—January 31, 1865.—This invention relates to that class of guards designed to prevent the accidental discharge of fire-arms; and it consists in providing the hammer with a toothed or ratchet arc, into which a spring pawl engages, and thereby firmly holds up the hammer from striking. A projection at the end of the arc trips back the pawl so as to throw its spring off from a shoulder, when the hammer is drawn back to full-cock, thus leaving it entirely free to fall; in doing so this same projection, striking the tail of the pawl, resets its spring on its shoulder so as to put it in condition again to engage with the ratchet arc when the hammer is raised.

*Claim*.—First, the combination with the hammer of a gun of a toothed rack and spring detent, for holding the hammer locked in certain positions, substantially as above described.

Second, setting the detent for engagement with the rack, and also throwing it beyond the path of the rack by means of the same dog *d*, substantially as above described.

No. 46,101.—WILLIAM F. GOODWIN, New York, N. Y.—*Mounting Hand Mortars*.—January 31, 1865.—The rear end of the mortar is extended as a hollow sleeve, having no trunnions or cheeks. The support consists of a stake fitting into this sleeve with an elastic disk or spring interposed between the end of the stake and the base of the mortar. A slot in the stake, and a pin passing through it and the sleeve, allows play for the recoil.

*Claim*.—First, constructing a mortar with a hollow sleeve projecting from its base instead of trunnions or cheeks, substantially as above described, for the purpose of receiving the elastic cushion or any equivalent spring, and the end of a stake, as above set forth.

Second, the combination of the slot *E* and pin *D* with the aforesaid mortar *A*, sleeve *B*, and spring *C*, as and for the purposes specified.

No. 46,102.—JAMES J. GORMAN, Cincinnati, Ohio.—*Dead Centre Lift*.—January 31, 1865.—The object of this invention is to prevent a crank from stopping at the dead centres, and thus to dispense with the use of a balance wheel in converting reciprocating into rotary motion. This object is accomplished by a combination of springs and auxiliary pitmen. The spring is gathered up as the crank approaches its dead centre, and throws the crank over the same through the medium of an auxiliary pitman acting on the crank at an angle of at least 45°. The mechanism can be changed so as to work in either direction by means of a suitable reversing gear.

*Claim*.—First, the reciprocating rod *G*, with tappets *b b*, working beam *F*, and pitman *E*, in combination with the pitman *C* and crank *D*, constructed and operating substantially as and for the purpose set forth.

Second, making the rod *G* reversible and combining it with working beams *F F'*, pitman *E E'*, and crank *D*, substantially as and for the purpose described.

Third, the expansion bearers *d d*, applied in combination with the spring *J*, pitman *E*, and crank *D*, substantially in the manner and for the purpose specified.

No. 46,103.—C. E. GRAY, New York, N. Y.—*Apparatus for Rendering Lard, Tallow, &c.*—January 31, 1865.—This invention consists of a closed tank or kettle having a jacket covering the part which comes in contact with the fire. The space contains water, which is heated so as to render the lard in the kettle. The vapors and gases which escape from the lard during the process of rendering are carried through a condenser, and afterwards through a gas purifier, or they may be conducted into the furnace and burner.

*Claim*.—First, making a close water jacket in combination with the tank and a part of it, and arranging said water jacket so made a part of said tank in direct communication with the furnace, so that the water jacket shall intervene between the fire and the tank and act as a means of conducting and distributing the heat from the fire to and around the fat.

Second, using the steam generated in a close tank from the constitutional water in the fat, for the purpose of aiding and controlling the escape of the noxious gases and vapors, either to a superheater for consumption in the furnace or to a deodorizer for the purpose of deodorizing them, or to a condenser for the purpose of condensing them, in the manner substantially as described for the purpose specified.

No. 46,104.—GEORGE SHAW HARWOOD, Boston, Mass.—*Machinery for Oiling Wool in Carding Machines*.—January 31, 1865.—The claim and engraving convey an intelligible idea of the nature of this invention.

*Claim*.—First, the means and manner herein described of oiling wool while being fed to carding or other wool-preparing machine by direct application of the oil or lubricating mixture on to either or both feed rollers, substantially as set forth.

Second, in combination with carding engines or other wool-preparing machinery of otherwise ordinary or suitable construction, a covered oil tank or cistern for supplying either or both feed rollers of said machinery with oil, whether the same is effected directly by dripping the oil upon the roll or through the intermediary of a brush, roller, or band, or the mechanical equivalent thereof.

Third, in an oiling apparatus constructed for use as an attachment to carding or other wool-preparing machine, and in which the oil is distributed to either or both of its feed rolls, the combination of an oil tank with a dipper arranged for operation substantially as set forth.

so that the oil or lubricating mixture shall be thoroughly mixed and conveyed to the feed rolls directly or through the intermediary of a brush, cylinder, or apron, substantially as described.

Fourth, the employment of a roller or rollers made of any of the vulcanizable gums, in combination with a dipper and pressure roller.

Fifth, in combination with a dipper and pressure roller, two or more rollers revolving both upon their own axes and upon an axis common to them, substantially as herein described.

Sixth, the apparatus herein described for oiling wool on the card, the same consisting of a tank extending transversely the whole width of the feed rolls of a rotary dipper and a revolving distributor, when arranged to operate as described, so as to agitate and convey the oil from the tank directly to the feed roller or rollers.

No. 46,105.—**CASSON HAYES**, Madison, Wis.—*Orchard Ladder*.—January 31, 1865.—This invention consists in the application to a ladder of a back brace attached to the top of the side frames by swivel joints and having one bearing joint on a line with the centre of the same. Across and near the lower end of the brace there is a bar running parallel with the steps, and when not in use is fastened thereto by a button. In combination with those parts are side braces secured to the top by means of swivel joints, and near the lower end of the ladder by means of hooks and bolts.

*Claim*.—First, the back brace B, constructed with a single bearing point, substantially as shown.

Second, the adjustable side braces C C, in combination with the brace B, as and for the purpose set forth.

Third, securing the side braces C C by means of the hooks D and buttons *d*, as shown and described.

No. 46,106.—**ANTOINE AUGUST HOFFMAN**, New York, N. Y.—*Scroll Sawing Machines*.—January 31, 1865.—The object of this invention is to improve the devices for operating a scroll saw, and it consists in applying pivots or points to the adjustable centres of motion working in conical sockets or guards, and also the attachment of a spherical head to the ends of the saw working in sockets made in halves and held in place by a jam nut and screw, so that the saw can freely turn and be held in any position by a set screw through the socket bearing on the head.

*Claim*.—The application to scroll saw frames of the adjustable centres of motion constructed with pins or points and conical sockets and retaining guards combined substantially in the manner described.

Also, the application of the device by which the saw may be turned, consisting of a cylindrical pin with a spherical head, combined with a socket made in halves and held by a jam nut and set screw, substantially as described, for the purpose specified.

No. 46,107.—**BIRDSILL HOLLY**, Lockport, N. Y.—*Hot-air Furnace*.—January 31, 1865.—This invention consists of a metallic cylinder or drum enclosed in brick work; coal or wood can be burned in it; coal in the grate in the front part of the cylinder, and wood on a plate pushed forward over the grate. By drawing the plate back the wood ashes are scraped off from it by a narrow strip of metal which crosses the cylinder at the rear of the fire bed, the ashes falling into the grate and ash-pit. The flue passage, which is on a level with the grate, is separated from the body of the cylinder by a diaphragm, leaving only a narrow escape-opening near the combustion chamber.

*Claim*.—The combination and arrangement of the radiating cylinder A, or equivalent, fire pot B, sliding plate G, flue opening *f*, and bar *h*, substantially as and for the purposes herein specified.

No. 46,108.—**ORSAMUS HOLMES**, New Lenox, Ill.—*Threshing Machine*.—January 31, 1865.—This invention consists in giving a longitudinal and tossing motion to the straw carrier, and imparting this same motion to the grain screen by levers connecting the two directly. Motion is also given to the straw shoe. Wire fingers fastened to and moved by the screen extend up beyond the straw carrier and toss the straw clear of the screen.

*Claim*.—The giving of a longitudinal shake and tossing motion to the straw carrier D by a pitman *b* and crank *a*; also, the connecting of the grain screen G to the carrier D through the medium of the levers E E, arranged as shown, in combination with the straw shoe F attached to the rear of the screen G, and provided with wires or rods *e e'*, substantially as and for the purpose herein set forth.

No. 46,109.—**BENJAMIN JACKSON**, Trenton, N. J.—*Safeguard for Protecting Pottery Ware*.—January 31, 1865.—This invention relates to a method of protecting pottery ware during the process of burning or baking, and consists in making the cylinders in which the article of ware are placed of a series of rings, so that one ring may be fitted over the other; the article to be burned or baked being fitted in each ring, and resting on pins thereon.

*Claim*.—A safeguard or "sagger" to receive articles of pottery ware while being burned or baked, composed of a series of rings or frames of fire-clay so constructed or arranged that they may be fitted one over the other and receive pins to support the articles fitted within, substantially as described.

No. 46,110.—PETER H. JACKSON, New York, N. Y., and SAMUEL EDDY, Brooklyn, N. Y.—*Windlass*.—January 31, 1865.—This invention consists of a chain drum having movable clutches so placed that the high parts are where the chain enters upon, and the lower parts where it leaves, the windlass. In addition the chain wheel has an annular space, with offsets, the better to adapt itself to the size of the chain.

*Claim*.—A chain wheel or windlass formed with radial ribs that are movable, substantially as specified.

Also, forming the annular space around a chain wheel with offsets C C, to better adapt the same to different sizes of chain, as specified.

No. 46,111.—OLIVER A. KELLY and ESTUS LAMB, Slatersville, R. I.—*Steam Engine Governor*.—January 31, 1865.—This invention consists in the employment of a revolving screw rod, to form the connection between the governor and the cut off or throttle valve, and applied in combination with an arm which extends from a rock shaft connecting with said valve, or from the valve spindle, the end of which is tapped to screw on said screw rod in such a manner that by the revolving motion imparted to said screw rod the valve is opened and closed independently of or in opposition to the action of the governor.

*Claim*.—First, the employment or use of a screw rod *b* screwing in the end of an arm *c*, which extends from the rock shaft or valve spindle *d*, and applied in combination with the governor and with suitable gear, substantially as and for the purpose set forth.

Second, the escapement wheel *k* and pawls *m m'* applied in combination with suitable bevel gear *e f*, screw rod *b*, and with the governor and valve gear, substantially as and for the purpose described.

Third, the shoe *r* and cam slot *b'* arranged in combination with each other and with the pawls *m m'*, escapement wheels *k*, screw rod *b*, and with the governor and valve gear, substantially as and for the purpose specified.

Fourth, making the shoe *r* in two parts which are hinged together, substantially as and for the purpose set forth.

Fifth, the tail *d\** applied to the hinged shoe *r* and operating in combination with the bar *e\** secured to the rock shaft *d*, substantially as and for the purpose described.

No. 46,112.—ROBERT KELLY, Tuscola, Ill.—*Gate*.—January 31, 1865.—This invention relates to the construction of gates where a brace is used to support the parts in connection with a perforated slide on the top thereof, held in position by means of a pin, for the purpose of preventing it from sagging.

*Claim*.—A gate constructed of uprights and slats and provided with an oblique or diagonal brace, one or more, a perforated slide and a pin or pins, all arranged substantially as and for the purpose herein set forth.

No. 46,113.—B. KLAHR, Bernville, Penn.—*Sawing and Boring Machine*.—January 31, 1865.—This invention consists of a carriage on which the post is clamped, and is moved by a lever and governed by distancing stops which regulate the length and relative distance of the mortise holes in the posts. When used for ripping or tapering the ends of the rails, the hinged yoke is thrown over the side, and the timber supported by the carriage and an end bracket, and presented in the required oblique position to the saw, whose oscillating frame is raised so as to expose the saw through the slot in the carriage, when its services are needed.

*Claim*.—First, the combination of the parts by which the post is secured in position and moved to the tool, consisting of the carriage C, the yoke *b* and clamping screw *a*, with the stapled lever *c* acting in connection with the pins *d d\** and stop *e*, substantially as described.

Second, the movable bracket J and forked rest *i*, in combination with the pin *j*, carriage C and saw I, constructed and operating substantially as and for the purpose set forth.

Third, the oscillating frame *r* in combination with the saw I, carriage C, and frame A, constructed and operating substantially as and for the purpose described.

No. 46,114.—ROBERT S. LAIRD, Sandwich, Ill.—*Lantern Frames*.—January 31, 1865.—This invention consists in constructing the wire guards of a lantern in two parts with hinges below and catches above, so that both sides may be turned down at pleasure to clean the globe, or in case of fracture to substitute a new one.

*Claim*.—The wire guards A attached at their lower ends to semicircular bars E E which are connected to the base B of the lantern by hinges or joints *a*, and attached at their upper ends to semicircular bars F F which are secured to the top C by catches G G, substantially as and for the purpose specified.

No. 46,115.—CHARLES LANG, Worcester, Mass.—*Machine for Making Lace Paper*.—January 31, 1865.—This invention consists in grinding off the elevated portions of embossed paper, which is accomplished by passing the paper between two rollers, one of which is covered with ground glass or emery, the other is impressed with a duplicate of the design on the paper. The grinding roller is made to revolve with the greatest velocity.

*Claim*.—Removing the elevated parts of embossed paper by means of an apparatus, the principal parts of which consist of two rollers, substantially in the manner and for the purpose described.

No. 46,116.—CHRISTOPHER LIDREU, Aurora, Ill.—*Cultivator*.—January 31, 1865.—This invention consists of a beam running parallel to and just over the axle, and is furnished with friction rollers. Two plough standards are attached to its ends. A slotted standard, carrying two slotted arms at right angles to it, rises from its centre. In these slotted arms are fastened two additional plough standards. Below the centre of the standards two rods work in slots, and pass through the axle to the feet of the driver, by which the ploughs are adjusted laterally. Two combined levers raise the parallel beams over the axle, and with it the four plough standards.

*Claim*.—The rising and falling bar E, operated by the levers L L', and having the plough standards I I permanently attached to it, as shown, in combination with the adjustable plough standards F F, attached to said bar as described, and operated by the crank shafts K, all arranged substantially as and for the purpose set forth.

No. 46,117.—WILLIAM A. LIGHTHALL, New York, N. Y.—*Tubular Condensers*.—January 31, 1865.—This invention consists in the combination of two exhausting fans, for carrying a current of air, to pass through the tubes in the body of the condenser, with the tubes, division plates, and reservoir for water. The tubes are arranged in a case, and the division plates are attached to the case in such a way as to cause the water to have a largely extended run in passing through the case and around the exterior of the tubes, while the steam to be condensed or the water to be cooled passes through them with the current of air.

*Claim*.—First, the combination of the exhausting fans J' J'', or their equivalent, with the tubes C and division plates a' a'' a''' a''', as and for the purpose set forth.

Second, the combination of the exhausting fans J' J'', or their equivalent, with the tube C and reservoir M, as and for the purpose set forth.

No. 46,118.—JOHN A. LLOYD, St. Paul, Minn.—*Tire-shrinking Machine*.—January 31, 1865.—By means of keys and other devices the operator is enabled to secure firmly the tire in the most advantageous position, and by means of a lever the tire may be upset without the aid of a hammer.

*Claim*.—First, constructing the lugs B B with horizontal and vertical key seats, so that the article to be secured may be pinched either upon its horizontal or vertical surfaces, at pleasure.

Second, in combination with the bed plate A of a machine for shortening tires the lever D, lugs B B, and keys C C, substantially as described and for the purpose set forth.

No. 46,119.—GEORGE E. LORD, Utica, N. Y.—*Spring Bed Bottom*.—January 31, 1865.—This invention consists of spiral springs placed in openings of the slats of the bed bottom. Pins with disk heads passing through the springs and resting on the lower ends. The bed rests on the disk heads of the pins.

*Claim*.—The combination and arrangement of the spring C with the slat B, the disk-headed pin D, the cap E, substantially as and for the purpose set forth.

No. 46,120.—R. LORD and L. HUTTON, Rittenhouse, Penn.—*Dofing Apparatus for Carding Engine*.—January 31, 1865.—The object of the arrangement herein claimed is the better securing a uniform lap without the aid of a reciprocating comb and by a continuous process, being designed as an improvement on Boyd's arrangement, as shown in patent No. 24,092.

*Claim*.—The carded cylinder B, carded rollers C, and plain stripping or clearing roller D, when combined with a carding engine, and arranged and operating as and for the purpose herein set forth.

No. 46,121.—F. LÜDKE, New York, N. Y.—*Folding Chair or Table*.—January 31, 1865.—This invention consists of a seat or top of flexible material, supported by a series of radiating arms hinged to a central hub, secured to the upper end of a sliding staff, in combination with hinged braces connected with the radiating arms and made to radiate from a sleeve through which the staff slides. The staff is supported by hinged legs, connected by toggle arms with a ring fitted on the lower end of the central staff.

*Claim*.—First, the vertically sliding staff A, with hub B, and radiating arms C, in combination with a sleeve F, braces E, hinged legs G, and toggle arms H, all constructed and operating substantially as and for the purpose set forth.

Second, the combination of the radiating arms C and braces E with a piece D of flexible material, and with legs G, substantially as and for the purpose described.

Third, the toggle arms H, in combination with the folding legs G and central staff A, applied and operating substantially as and for the purpose specified.

No. 46,122.—AZEL S. LYMAN, New York, N. Y.—*Air Pump*.—January 31, 1865.—This invention consists of an air pump, which is supported in bearings in such a manner as to have an oscillating motion. The piston is attached to a balance-wheel operated by a crank. In the lower part of the cylinder is a valve closing the air tube, and to which is attached a rod extending down from the cylinder and surrounded by a spring packing. The end of this

rod rests on an inclined plane, so situated that the ascent of the piston commences while the valve-stem is riding up the inclined plane, thus opening the valve, which, when the piston descends, is closed by the same means. The air escapes through small holes in the piston and cylinder cup.

*Claim.*—First, an oscillating air or vacuum pump whose valve is operated by a positive movement derived from its vibrating motions, and independent of the piston, substantially as above described.

Second, constructing and operating the valve and its stem of a vacuum pump, substantially as above described.

Third, the combination of the inclined plane J with the valve and valve-stem of an oscillating vacuum pump, substantially as and for the purpose above described.

Fourth, packing the joint around the valve-stem by means of the elastic ring r and the packing ring A, substantially as above described.

Fifth, packing the joint on the hollow journal of the pump where it unites with the air tube by means of a packing ring, substantially as above described.

No. 46,123.—WARREN LYON, New York, N. Y.—*Drilling Machine.*—January 31, 1865.—The operative parts of this drill are the same in all respects, except in their arrangement, as those described in the Lyons patent, dated September 20, 1853. The table which supports the work to be operated upon is, however, arranged in a different manner. Thus, the arm which supports the table has an eye or socket at one end which embraces a cylindrical spindle fixed in a vertical position to the upright post or framework of the machine, said arm being free to be elevated to different heights and placed in different radial planes, and which may be fixed in any desirable position by a set screw. The manner in which the table is adjusted upon the outer end of the projecting arm makes it convenient to substitute one table for another, and thus render the machine convenient for drilling metallic objects of different shapes. One table, with a clamping device attached to it for clamping nuts or square bars of various diameters, is the subject of the second clause of the claim.

*Claim.*—First, the arrangement, as herein shown and described, of the levers I L, drill arbor D, with weight F attached, the counterpoise M on lever L and the rod N, for the purpose specified.

Second, the projection u and sheath p p on the face or upper side of the bed plate P, in combination with the slide R', screw S, and the adjustable arm Q, to which the bed plate is attached, all arranged substantially as and for the purpose set forth.

Third, the bracket C, with the bearings a a attached, when used in combination with the drill arbor D and its concomitant parts, as herein shown and described.

No. 46,124.—JOSEPH C. LYON, Auburn, N. Y.—*Testing Oil Wells.*—January 31, 1865.—The object of this invention is to ascertain throughout the entire length of the well where oil may be obtained, and to interpose above and below an oil fissure water-gas or other substance which might interfere with the flow and delivery of oil.

It also consists in the combination and arrangement of two air chambers, made flexible, with air and discharge pipes, whereby to cut off above and below the chambers, when inflated with foreign substances, and thereby allow oil to flow between the two air chambers and out of the discharge pipes.

*Claim.*—The combination and arrangement of two flexible air chambers with the air and discharge pipes, so that the air chambers can be placed at any point within the walls of oil wells, and there be inflated, whereby to cut off above the upper and below the lower chamber, water-gas and other substances, and thereby allow the oil to pass from a fissure between the two chambers and out of the discharge pipes, substantially as herein set forth.

No. 46,125.—ISAAC M. MILLBANK, Greenfield Hill, Conn.—*Breech-loading Fire-arm.*—January 31, 1865.—This invention is set forth in the claim.

*Claim.*—A new breech-loading fire-arm, combining the following elements, namely: The wedge C, rotating on a hinged arm transversely to the axis of the barrel and provided, as well as the faces on which it impinges, with cleaning grooves e, the front face of the breech-piece having an annular bead projecting forward into a corresponding groove in the rear of the barrel, so that by the withdrawal of the wedge the breech-piece may be freed to move to the rear sufficiently to enable the bead to clear the sides of the groove as the hinged breech-piece is rotated out of its chamber, and on being returned charged may be driven home with the bead pressing upon the elastic packing of the groove, the whole arrangement thus described working upon or contained within a frame A, which secures the barrel to the abutment.

No. 46,126.—EZRA MILLER, Janesville, Wis.—*Car-coupling and Buffer.*—January 31, 1865.—The object of this invention is to provide for connecting cars having their coupling hooks to cars of locomotives having other forms of couplers; also to construct coupling hooks partly of wood and partly of metal, in such manner as to obtain all the strength of the one and the lightness and cheapness of the other; also to so form these hooks that they will bear evenly on their stirrups and be less liable to wear away and tilt over on one side; also to provide for connecting together each one of a train of cars in such manner that the lateral jerk-

ing motion of a train and all the unsteadiness and injurious effect occasioned thereby will be effectually prevented, and at the same time the longitudinal shocks occasioned by suddenly stopping and starting a train be resisted. For the said purpose a contrivance is employed which is located in a line with the strongest part of a car body, viz., the flooring timbers.

*Claim.*—First, so constructing hooked-head car couplings that they are adapted to receive links and other forms of couplers and form connections therewith, substantially as described.

Second, a hooked-head car coupling which is composed of wood and metal, constructed substantially as described.

Third, bending the heads or forward portions of the shanks of coupling hooks in such manner as to give them an even bearing on their stirrups and thus prevent them from tilting laterally in consequence of wear, substantially as described.

Fourth, locating an elastic buffer in the end of the buffer beam A of a platform which is elevated so as to be brought in a horizontal plane with the bend of the car body, substantially as described.

Fifth, constructing the buffer head D' with a square shank D, having a rounded extension D'' on its ends, substantially as described.

Sixth, preventing lateral thrust of cars in motion by means of interlocking buffer heads, constructed and operating substantially as described.

No. 46,127.—JOSEPH A. MILLER, New York, N. Y.—*Casting Grate Bars for Furnaces.*—January 31, 1865.—This invention consists in casting the grate bars and moulding the patterns on either side of a suitable chill or core, which has a tongue on each of its edges fitting in and forming a groove on the upper edge of the grate bar when cast.

*Claim.*—Casting two bars simultaneously on the same core, substantially in the manner and for the purposes set forth.

No. 46,128.—THOMAS MILLER, Columbus, Ohio.—*Canal Scraper.*—January 31, 1865.—This invention consists in providing a scraper made movable about a pivot, so that an angle of any desirable obliquity can be presented to the current by the person operating the machine, by means of which obliquity the scraper can be guided to any part of the channel, to tear up vegetable growth or sedimentary deposit, and to allow the same to be washed off by the current.

*Claim.*—The combination and arrangement of the tongue with projecting footboard and parallels, whereby the movable principle is attained for the scraper, subject to the control of the operator, substantially as set forth and for the purposes specified.

No. 46,129.—ENOCH R. MORRISON, New York, N. Y.—*Shingle Machine.*—January 31, 1865.—This invention is designed as an improvement on the patent granted to the present patentee, November 22, 1853, and it consists in the application to a shingle machine of an elastic table, pressure plate, projections, with their operating cams for retaining and releasing a tooth-bar, together with an arrangement of jointers for jointing the shingles.

*Claim.*—Forming the table C of a spring plate in such a manner as to furnish an elastic surface its whole length, the same being provided with two projections c c, and operating in combination with the riving knife b, substantially in the manner and for the purpose herein set forth.

Also, the pressure plate M, made elastic by the spring o, in combination with the way N and tooth bar E, in such a manner that said plate will rise over the bar, but produce a pressure on the shingles in the rear, substantially as specified.

Also, the projections k' on the under side of the pressure plate M, which force the riven shingle to the bed plate if too short to be borne upon by the extreme end of the pressure plate M, the whole arranged as herein set forth.

Also, the arrangement of the gauge slide P, lever v, and cam bar Q, in combination with the tooth bar E, projection R, and cam O, to retain and release the said tooth bar in the manner substantially as herein specified.

Also, the arrangement of the bar T, provided with the cams c' c' and block U, in combination with the tooth bar E and the cams V V, for retaining and releasing the said tooth bar, substantially as herein set forth.

Also, the combination and arrangement of the jointers Y, arms h' h', guides z, and spring or springs g' in such a manner that said jointers act centrally on the shingles substantially as herein set forth.

No. 46,130.—ISAAC D. MYERS and M. D. WELLMAN, Pittsburg, Penn.—*Cotton Seed Planter.*—January 31, 1865; antedated January 19, 1865.—The object of this invention is to overcome the difficulty of the cotton seed becoming matted, and clogging the machine. The hopper is vibrated in the usual manner, with a horizontal shaft running lengthwise over the centre of the hopper with a crank in its centre to which is attached an upright shaft working perpendicularly, with arms projecting therefrom for the purpose of separating the seed from the cotton.

*Claim.*—First, The use of a feeding rod having a finger or fingers which vibrate up and down through a suitable orifice in the bottom of the seed box, so as to feed a few seeds only at a time and that at regular intervals, substantially as described.

Second, also, in combination with the feed rod and fingers, wires so placed in that part of the rod which passes through the cotton in the feed box, for the purpose of loosening the mass of cotton seeds and separating them from each other, substantially as described.

Third, also the use of the sliding frame with or without the inclined planes, and operated substantially as described, for the purpose of supplying the cotton seed into the hopper box.

Fourth, also the use of the curved projections *r r* on either side of the hopper box, to prevent the cotton being fed too fast into the hopper box, and clogging therein, substantially as described.

No. 46,131.—FREDERICK D. NEWBURY, Hudson City, N. J.—*Rammer for Revolving Fire-arms*.—January 31, 1865.—This invention consists of a lever or rammer pivoted near its rear end, so that its connection acts as a swivel. In front of said joint is a projecting lug at right angles to the same, and which carries a pivoted arm that pushes in the ammunition, when the main rammer is used as a lever.

*Claim*.—The method of attaching the ramrod to the frame of the piece by the use of revolving standard S, in order to permit the employment of the same in combination with a cylinder, constructed, arranged, and operated substantially as set forth in this specification.

No. 46,132.—JOSEPH W. NORCROSS, Middletown, Conn.—*Row-lock*.—January 31, 1865.—This invention consists of a crutch for the reception of the oars which bear on a pintal, on the end of which are inclined planes, the same making the plates on which the pintals are secured give elevation or depression to the row-lock.

*Claim*.—The inclined planes in combination with the row-lock and pin on which the same swivels, whether the same be secured by the plate or gunwale or the row-lock, substantially as and for the purpose herein set forth.

Also, the spring catch applied in combination with the row-lock and with the pin on which it swivels, substantially as herein described, for the purpose of holding the row-lock in and prevent its coming out spontaneously.

No. 46,133.—CHARLES PARHAM, Philadelphia, Penn.—*Sewing Machine Stitch*.—January 31, 1865.—This invention relates to a machine peculiarly adapted to button-hole work. The needle has two motions to one of the shuttle, so that the latter carries its thread through only every alternate needle thread loop, and not through every loop.

*Claim*.—A machine-made stitch, formed by first making a loop in one thread and passing a second loop of the same thread through the first loop, and then passing a second thread through the second loop, and drawing up the slack of the threads and loops tightly in the cloth or other material as it is fed along to receive the stitches, as set forth.

No. 46,134.—A. H. PERKINS, Chicago, Ill.—*Process for Manufacturing Under-ground Pipes*.—January 31, 1865.—This invention consists in making pipes by casting prepared pitch, or other bituminous substance, between two concentric tubes of heavy fibrous paper or felt.

*Claim*.—Manufacturing pipe by casting prepared pitch or other bituminous substances or compounds between two concentric tubes of heavy fibrous paper or felt, or its equivalent, substantially as and for the purposes herein set forth.

No. 46,135.—CHARLES PERLEY, New York, N. Y.—*Riding or Warping Bit*.—January 31, 1865.—This invention consists of two riding bits which are grooved, the line or hawser passing around both bits in their grooves.

*Claim*.—The pair of grooved riding bits, formed and applied as and for the purposes specified.

No. 46,136.—LOUIS PETERSON, Baltimore, Md.—*Fastening Pockets to Billiard Tables*.—January 31, 1865.—This invention consists in constructing a pocket frame with ears in such a manner as to be easily attached and detached from the table, without disturbing the other parts.

*Claim*.—The peculiar construction of the metallic frame carrying the pocket, as described within, and the manner of fastening these frames to the bands of billiard tables by means of screws passing the wood-work of said bands and screwed into metallic nuts sunk into them, substantially as specified hereinbefore.

No. 46,137.—JOHN C. PFIEL, Arenzville, Ill.—*Gang Ploughs*.—January 31, 1865.—This invention consists in the arrangement of parts by which the relative position of the plough beam and draught pole are maintained, after the former has been depressed by the foot of the driver.

*Claim*.—The arrangement of parts by which the relative positions of the plough beam and the draught pole are maintained after the front of the former has been depressed by the foot of the driver, and consisting of the tension chain K and lever G, with its retaining rack J, the points of attachment being the draught pole B and the frame A, the whole constructed and operated as described and represented.

No. 46,138.—ANSON H. PLATT, Yellow Springs, Ohio.—*Lamp Burner*.—January 31, 1865.—This invention consists in first placing the wick regulator on a horizontally movable shaft, so as to regulate one or two wicks as required. A horizontally sliding elastic pin is used to fasten the chimney.

*Claim*.—The laterally movable wick regulator H, operating substantially as and for the purposes herein specified, whether employed for regulating one or two wicks.

Also, the horizontal sliding elastic bolt D for fastening the chimney, substantially as herein specified.

No. 46,139.—WILLIAM PLATT and A. G. BURNHAM, Greenfield, Penn.—*Hay Loader*.—January 31, 1865.—The object of this invention is to provide means, in connection with the elevator, by which the rake may be readily raised or lowered by a person upon the load. The invention will be understood from the claim and engraving.

*Claim*.—In combination with the elevator C, the arrangement of the rod *e* and the rocking frame *g g'*, pivoted on the bar *i* and connected to the rakes D, by which the latter are raised as may be required, substantially as described and represented.

No. 46,140.—E. L. PRATT, Boston, Mass.—*Adjustable Gun Scraper*.—January 31, 1865.—The head of the gun scraper, into which the end of the ramrod screws, carries several longitudinal spring arms surrounded by a sliding ring or collar. Each arm carries a triangular shaped scraper, capable of oscillation, or of removal and adjustment or replacement.

*Claim*.—So applying each scraper blade *c* that it swivels or turns upon or with respect to its spring or wire *b*, for the purpose substantially as set forth.

Also, making each scraper *c* removable for repair, substitution, or adjustment, substantially as set forth.

No. 46,141.—CHARLES H. REICHMANN, New York, N. Y.—*Coal Oil Stove*.—January 31, 1865.—The object of this invention is to obtain a simple portable stove for burning coal oil economically, and it consists of a lamp having a sheet-metal chimney, the upper part of which is surrounded by a sheet-metal drum, on the top of which and over the top of the chimney is placed a kettle or other vessel.

*Claim*.—First, coal oil stove composed of one or more lamps provided with draught chimneys, and arranged in connexion with a drum, substantially as herein described.

Second, in combination with a coal oil stove constructed and arranged as above set forth, the slide or door *h* and glass *f* applied to the lower part of the draught chimney, in the manner and for the purposes specified.

No. 46,142.—PETER RIORDAN, Washington, D. C.—*Safety Valve Regulator*.—January 31, 1865.—The object of this invention is to guard against the liability of explosion of boilers by reason of undue pressure from insufficient action of the safety-valve, with the usual mechanical arrangements, and to indicate the amount of steam pressure exerted on the boiler, and readily reduce it when becoming excessive.

Its novelty consists in the combination of cylinders having different diameters, with piston heads, port *a'*, valve F, spring E, adjustable collars G, hollow graduated shaft D, and the apertures *d*.

*Claim*.—First, in combination with a cylinder formed in two parts, A A', of different diameters, the piston heads B B' when so arranged that the effective area of the head B on that side next the steam port *a* exceeds the effective area of the head B' on the side next the port *a'*, by as much as the area of the safety-valve divided by the number of times by which the length of the long arm of the safety-valve lever exceeds that of short arm.

Second, the combination of the valve F, spring E, and adjustable nut or collar G, with the hollow graduated shaft D and apertures *d*, the whole being arranged and employed substantially as and for the purpose set forth.

No. 46,143.—J. F. RICH, Chatham Run, Penn.—*Process for Manufacture of Fuller's Soap*.—January 31, 1865.—This invention consists in a soap made of the liquor in which wool and card strippings, or card strippings and other greasy waste, have been scoured, said liquor being treated with potash lye or other saponifier, additional fatty matter being added, if sufficient should not be obtained from the scouring process.

*Claim*.—A soap made by treating the liquor in which wool and card strippings or other greasy waste have been scoured with salt alkalies or other saponifiers, substantially in the manner herein set forth.

No. 46,144.—SAMUEL J. SEELY, New York, N. Y.—*Press and Bulkheads*.—January 31, 1865.—This invention consists in building hollow piers of metallic tubular sections so formed that each tube or section shall be firmly locked between two tubes or sections when arranged in lines or angles to form the pier of any desired shape, according to its location. The tubes, when two or more sections are set in place, are filled with rubber, graveling, cement, or plaster, to fully exclude water therefrom. A chamber is formed partly in each tube, which, when two tubes are united, shall truly register throughout the entire length of the tubes, and be filled with wood, plaster, or cement, to wholly prevent the passage of

water between them when in position. Into the separate sections or tubes, whether above or below the water line, are introduced lateral openings, into which is placed some transparent medium, through which may be admitted to the interior of the pier, or to any room, chamber, or division into which the whole structure may be divided, when these openings are protected by suitable fenders, in order to utilize the interior space between the walls of the pier.

*Claim.*—First, forming water-tight walls partly subaqueous, for piers or similar structures, of mitre-locked sections, to utilize the area they enclose, substantially in the manner described.

Second, forming sections for the construction of piers, substantially as described, so that one will firmly interlock with another and exclude the passage of water between them, as set forth.

Third, the combination, in piers or similar structures, of sections that will permit the entrance of light to the area they enclose, with suitable fenders to protect them, arranged substantially in the manner and for the purpose set forth.

No. 46,145.—SAMUEL J. SEELY, New York, N. Y.—*Car Wheel.*—January 31, 1865.—The object of this invention is to produce a strong, light, and durable car wheel, and one that will run with comparative silence; and to this end the invention consists in combining a cast metal hub with a metallic rim, by corrugated metal disks.

*Claim.*—First, the combination of the flanged hub with the flanged rim by means of the corrugated face plates, substantially in the manner described for the purposes set forth.

Second, the wooden disk arranged between the rim, the hub, and the face plates, substantially as and for the purposes described.

No. 46,146.—SAMUEL J. SEELY, New York, N. Y.—*Construction of Docks.*—January 31, 1865.—This invention consists of a metallic skeleton dock, composed of piles, columns, or other tubular supports, and tied by beams, guides, trusses, or cords, combined with a fender and springs to prevent injury to either the dock or vessels.

*Claim.*—First, the construction of a dock, lock, or other subaqueous structure exposed to the contact of vessels, having metallic tubular supports united together with beams or girders, or trusses of iron, or wood and iron combined, in combination with a fender of wood or iron, or both, combined with an elastic substance or spring interposed between the dock and fender to prevent injury to the structure from shock or pressure applied to the fender, constructed and operated substantially in the manner above described.

Second, the combination of a tank vessel or wall of iron, or iron and cement combined, having tubular supports, with a fender, and forming a dock, lock, wall, or other subaqueous structure exposed to the contact of vessels, so constructed and operating as to ease off all sudden shocks, and to be braced within the structure, substantially as above described.

No. 46,147.—SAMUEL J. SEELY, New York, N. Y.—*Rudder with corrugated surfaces.*—January 31, 1865.—This invention consists in the application of corrugated iron to the surface sides of rudders.

*Claim.*—Corrugating the sides of the blade of rudders, substantially in the manner and for the purposes set forth.

No. 46,148.—S. B. SEXTON, Baltimore, Md.—*Coal Scuttle.*—January 31, 1865.—This invention consists in placing a perforated metal plate by means of hinges about midway of an ordinary coal scuttle, thus dividing it into two parts, said plate serving also as a sifter for the coal. The plate is so constructed with flanged sides that when the scuttle is used the flanges above mentioned prevent the coal from dropping over the sides of the scuttle on the floor.

*Claim.*—First, providing a coal scuttle with a hinged plate, which is so arranged within the scuttle as to serve as a screen for sifting coal dust and ashes, or as a shield for preventing lumps of coal from escaping over the sides of the scuttle during the act of replenishing the fire.

Second, constructing the hinged plate A with flanged sides, substantially as described.

No. 46,149.—H. M. SHAW, Tremont, Sandusky county, Ohio.—*Machines for Cutting Staves.*—The knife frame is attached by pitmen to the wrists of cranks, which receive their effective motion from fly wheels whose slotted radial arms receive the said wrists, and thus cause the cranks to revolve in such a manner that, in the descent of the knife, the leverage power shall increase as the wrists gradually approach the centre of revolution of the fly-wheel shaft.

*Claim.*—The slotted arms *a* of the fly wheels *c c* to receive the pins *E E* of the cranks *F F*, the shafts *G G* of which are placed out of line with the fly-wheel shaft *B*, and all arranged in connection with the pitman *H H*, to operate the knife frame *I*, substantially as and for the purpose herein set forth.

No. 46, 50.—H. M. SHAW and C. B. STILWELL, Tremont, Ohio.—*Bread and Meat Slicer.*—January 31, 1865.—This invention consists in the employment of a rising and fall-

ing gate, with a gauge and knife attached, the latter having, besides the rising and falling movement given it by the gate, a reciprocating movement, the gauge being adjustable, and all arranged with a feed box in such a manner that, by the turning of a shaft continuously in one direction, the article in the feed box will be cut or sliced expeditiously.

*Claim.*—First, the knife H, attached to a sash or gate B, having a rising and falling movement communicated to it by a crank and connecting rods or their equivalents, and the knife having an automatic reciprocating movement communicated to it from the sash or gate through the medium of the lever I and rod J from the crank or drawing shaft, substantially as and for the purpose set forth.

Second, the adjustable gauge F attached to the sash or gate B, substantially as shown, when used in combination with the knife H, and all arranged to operate substantially as and for the purpose specified.

The adjustable bottom G, in combination with the gauge F and knife H, all arranged to operate as and for the purpose set forth.

No. 46,151.—ELBRIDGE SIMS, Antwerp, N. Y.—*Clothes Dryer*.—January 31, 1865.—This invention relates to devices for holding clothes, and consists of a series of frames connected by pivots suspended from a wall and provided with arms so arranged that the whole may be expanded.

*Claim.*—A clothes dryer composed of a series of frames A B C, connected together by pivots or joints suspended on a wall or vertical support, and provided with bars D, all arranged substantially as described.

No. 46,152.—DWIGHT SLATE, Hartford, Conn.—*Turning Lathe*.—January 31, 1865.—This invention consists in attaching to the back shear of a lathe a horizontal guide bar, upon, and guided by which, moves a slide, attached by a connecting rod to the transverse sliding cutter carrier. By varying the angle of the axis of said guide from that of the lathe any desired taper can be given to the object turned thereon.

*Claim.*—The employment, in combination with the guide bar *g*, and with the adjusting screw *d*, or its equivalent, of the tool carriage of the connecting bar *f*, arranged substantially as herein set forth.

Also, the employment, in combination with the guide bar and connecting bar aforesaid of the slide *l* jointed to the connecting bar and locked to the guide bar, substantially as and for the purpose herein before specified.

No. 46,153.—A. F. SPALDING and SALMON F. SCOTT, Winchendon, Mass.—*Meat Chopping Machine*.—January 31, 1865.—A driving wheel being put in revolution imparts a continuous rotary motion to a tub which contains the meat to be cut, and also communicates to two knives which cut the meat, reciprocating alternate motions in vertical planes, so that they operate with a drawing stroke upon the meat. By means of the rotary motion of the tub, every part of the material is brought under the action of the knives.

*Claim.*—The improved machine constructed substantially in manner and so as to operate as described—that is to say, with the safety spring or springs *e* arranged with each of the knife carriers and its operative mechanism as described, the knife or knives being arranged to work in a rotary tub in manner as explained.

No. 46,154.—GEORGE STONE, Boston, Mass.—*Tool for Drawing Spikes*.—January 31, 1865.—In this device the jaw formed on the extremity of the handle is pivoted to and plays between two pieces of metal shaped somewhat like the letter S, the convex edge of one limb of each forming, together, a rocking fulcrum, while the opposite extremities of the S-shaped pieces have a less extended curvature, are brought more nearly together, and are consolidated into one single jaw by the interposition of a solid piece of metal between them.

*Claim.*—The handle or lever A, formed or provided with the jaw B, in connection with the rocker-shaped fulcrum *c c*, provided with the jaw D, and having the handle or lever secured between them by a pivot bolt, substantially as and for the purpose herein set forth.

No. 46,155.—PETER SWEENEY, New York, N. Y.—*Corn Sheller*.—January 31, 1865.—This invention consists in the employment of a revolving open cylinder with a helical flange, and pegs in combination with a series of hoppers situated at suitable distances apart around the periphery of the flanged cylinder in such a manner that ears of corn dropped endwise into said hoppers are brought in contact with the flange and pegs of the cylinder, and by their combined action the corn is shelled. The hoppers are composed each of three plates perforated with slots of sufficient size to admit the passage of the kernels. Two of these plates are placed in a radial, and the third in a tangential position, and the radial plates are rigidly secured to the frame, whereas the tangential plate is made yielding, so that by its action the ears are held in contact with the periphery of the cylinder while passing through the hopper.

*Claim.*—First, the revolving open cylinder D, with a helical flange *b*, and pegs *d*, in combination with a series of hoppers F, arranged around said cylinder and operating substantially in the manner and for the purpose herein shown and described.

Second, the perforations *g*, in the plates *c' d'*, composing the hoppers, arranged substantially as and for the purpose described.

No. 46,156.—N. S. THOMAS, Painted Post, N. Y.—*Process for Making Concentrated Fluid Extracts*.—January 31, 1865.—This invention consists in grinding the drug or material to be operated upon to powder, after which it is moistened with a small quantity of the liquid, by means of which the extract is to be made. The mass is then subjected to pressure, whereby the liquid and a greater part of the soluble portions of the drug are expressed. This operation is repeated until the soluble matter is entirely exhausted and a concentrated extract obtained without evaporation.

*Claim*.—The within described process of producing concentrated fluid extracts by bringing the crude drug gradually in contact with the desired measure of liquid to be represented by the extract, and exposing it after each application of liquid to a heavy pressure substantially as set forth, whereby extracts of uniform strength can be made and both heat and evaporation are avoided.

No. 46,157.—S. TOTTEN, Brooklyn, N. Y.—*Apparatus for Fluting Trimmings*.—January 31, 1865.—A frame being properly arranged, two rows of heated iron rollers are so arranged that each of the upper rollers rests on and between two of the lower rollers, the fabric being laid under a lower roller and over an upper one so as to embrace nearly the whole surface of each. When the rollers have become cool the fluting is accomplished.

*Claim*.—A fluting apparatus consisting of a series of rods C D, and one or more frames A, arranged and operated substantially as shown and described.

No. 46,158.—THOMAS UREN, New York, N. Y.—*Artificial Limbs and Hands*.—January 31, 1865.—This invention is set forth in the claim.

*Claim*.—The combination of the expansion and contraction cords with each other and with the artificial upper and fore-arm hinged at the elbow joint, and with the straps or equivalent thereof, for securing the artificial arm to the body, and with which the said expansion and contraction cords are attached, substantially as described, whereby the fore-arm can be lifted and bent or thrown out and straightened at the will of the person wearing it, by a simple motion forward or backward of the stump of the amputated arm.

Also, the combination of the hinged fore-arm with the balance cord and spring, substantially as described, whereby the weight of the hinged fore-arm is balanced by the said spring, and when desired can be made to hang naturally, as described, while at the same time the fore-arm, being so balanced, will greatly facilitate the motions to be imparted to the artificial arm.

Also, the combination of the expansion and contraction cords with the balance cord and spring with the hinged fore-arm, substantially as and for the purpose specified.

Also, the combination of the hinged hand, the turning wrist piece, the fore-arm, and the hinged connecting rod, substantially as and for the purpose specified.

Also, the hinged hand, the turning wrist piece, the fore-arm, and the hinged rod by which they are connected, substantially as specified, in combination with the means of connecting the said hinged rod with the fore-arm by a turning joint and spring, or equivalent adjustable connection, substantially as specified, so as to admit of turning the wrist, as set forth.

Also, the hinged fingers with the contraction cords and the spring with which the said cords are connected, substantially as described, whereby the fingers and, as an equivalent, the thumb can be contracted, as set forth, whether the said spring be located within the hand or on the arm, as set forth.

Also, the hinged fingers, the contracting cords and the spring connected therewith, in combination with the expansion finger cords, substantially as described, whereby the fingers can be opened or closed at the will of the person wearing the artificial hand, as set forth.

No. 46,159.—THOMAS UREN, New York, N. Y.—*Artificial Arms and Hands*.—January 31, 1865.—This invention is explained by the claim.

*Claim*.—Combining the fore-arm, which is hinged at the elbow, to the upper artificial arm with a cord attached to the back of the fore-arm and below the elbow-joint, and which passes over a guide roller mounted in the fore-arm and near the lower part thereof, and thence through the back of the upper arm and attached to the strapping at or near the back, substantially as described, thus enabling me to produce an artificial arm for an upper amputation, which, by a single connection, will enable the person wearing it to move the arm at will, as described.

Also, the spring arm or lever which projects to the outside of the fore-arm, so as to be operated by bearing against any resisting object, substantially as described, in combination with the jointed fingers and the expansion and contraction cords, substantially as and for the purpose specified.

No. 46,160.—ROBERT G. VASSAR, Poughkeepsie, N. Y.—*Blueing Paste*.—January 31 1865.—This invention consists of a composition of bi-carbonate of soda, indigo paste, and acetic acid.

*Claim*.—The peculiar combination of the above ingredients, forming a more economical and perfect blueing than any now in use.

No. 46,161.—GEORGE W. WALKER, Lowell, Mass.—*Chest-expanding Suspenders*.—January 31, 1865.—The suspenders are perpendicular behind, reaching up nearly as high as the shoulders, where a transverse belt connects them, and is continued over each shoulder and thence down to the waistband in front. Another transverse belt connects the perpendicular parts behind midway between the upper belt and the waistband, and is continued under the arm to unite with the upper belt in front of the shoulder. The upper transverse belt is divided over the shoulder so as to permit the joint of the clavicle and the humerus to move freely within or beneath the opening thus formed.

*Claim*.—The openings V V, in the shoulder pieces D D, of chest-expanding suspenders when made and applied substantially as herein described and shown and for the purpose set forth.

No. 46,162.—JONATHAN WALTON, Brooklyn, N. Y.—*Making Corrugated Funnel Spout*.—January 31, 1865.—This invention consists in corrugating a piece of sheet metal of a suitable shape, bending it around a fluted tapering mandrel and then compressing the two between a pair of fluted or corrugated dies to give the spout the shape required.

*Claim*.—The process of making corrugated funnel spouts by first crimping the flat plate between corrugated plates E E, and afterward turning it around a longitudinally corrugated mandrel and pressing it thereon between corrugated dies, all as hereinbefore described.

No. 46,163.—JEFFERD L. WEAVER, Orange, Mass.—*Making Bonnet Binding*.—January 31, 1865.—This invention consists in weaving binding in strips of any desired length. The pieces forming the warp are selected of unequal lengths and new pieces added by adjusting the squared ends together and holding the newly added pieces in position by cords attached to them, which cords hold weights in suspense at their other ends, and thus keep the strips up to the desired places until made secure by the woof of the binding. This process is applicable to looms of any description adapted to weaving the material.

*Claim*.—The above described continuous bonnet binding, the same being produced by arranging the warps or strands alongside of and so as to lap by and on one another, as explained, holding each strand in place by means of strings and weights until woven into place, and finally connecting the warps by a filling or weft woven into them substantially as described.

No. 46,164.—HENRY WEBSTER, Beetown, Wis.—*Gang Plough*.—January 31, 1865.—This invention consists in placing one or more ploughs upon a jointed frame carried on wheels, and raised or lowered by means of a rack and pinion, and the ploughs guided to or from the land by a segment and pinion.

*Claim*.—First, the employment or use in a mounted gang plough of an oblique adjustable axle so arranged as to admit of the ready adjustment of the wheels for giving the ploughs more or less land, substantially as set forth.

Second, the frame H, applied to or connected with the draught pole A, by means of a joint in connection with the racks and toothed segments, when applied to gang ploughs, substantially as set forth.

No. 46,165.—THOMAS WELHAM, Washington, D. C.—*Steam Engine*.—January 31, 1865.—This invention consists in the use of two cylinders, having in each a right and left hand screw, so arranged that the threads meet in the centre, at which point the steam is admitted, and from which point it passes to either end of the cylinder, where it exhausts into the other cylinder, in which it returns to the centre, where an aperture is provided for its escape to the atmosphere. The screws are geared, and upon the shaft of one a pulley is placed for the purpose of transmitting power to any machinery to be driven.

*Claim*.—Placing one, two, or more right and left hand screws in the cylinders, as herein described, on the inside or outside of a steam or gas boiler, so as to receive and discharge the steam or gas, substantially as and for the purposes set forth.

No. 46,166.—THOMAS WELHAM, Washington, D. C.—*Universal Shafting*.—January 31, 1865.—This invention consists in a revolving shaft made of flexible material so as to operate in various positions or at any curve for the purpose of driving machinery of all kinds.

*Claim*.—A revolving shaft made of flexible material so as to operate in various positions or any curve, in the manner and for the purposes set forth.

No. 46,167.—THOMAS WELHAM, Washington, D. C.—*Hydraulic Brush*.—January 31, 1865.—This invention consists in the combination of a revolving brush with a water wheel attached to the nozzle of the hose, for washing windows, &c., the force of the water causing the wheel to revolve and spray the water through and around the brush.

*Claim*.—The arrangement and combination of the revolving brush and the revolving water wheel attached to the point of a water spout or hose, as herein described and for the purposes set forth.

No. 46,168.—H. W. WILCOX, Columbus, Penn.—*Folding Bucket*.—January 31, 1865.—The invention is fully set forth in the claim.

*Claim.*—A folding pail or bucket composed of a rim constructed of a number of parts B, connected together by joints and having a flexible water-proof substance attached to them to form the body of the pail or bucket, and the rim having a jointed handle C attached, all constructed and arranged substantially as set forth.

No. 46,169.—DAVID WOLF, Lebanon, Penn.—*Reaping Machine.*—January 31, 1865.—This invention consists in constructing the hinged platform of the machine with a joint, or joints, in the length thereof, and parallel with the line of its hinged connection to the finger bar, in such manner that by springing the joint upward and suddenly returning it, so as to bring the parts of the platform again into line, the grain will be thrown from the platform upon the ground.

*Claim.*—A platform for reapers, composed of two or more parts connected by a joint or joints, and arranged to operate in the manner substantially as herein shown and described.

No. 46,170.—ALONZO WOOD, Henrietta, N. Y.—*Harvesters.*—January 31, 1865.—This invention relates to the arrangement of means for adjusting the height of the reel, while the machine is in motion, to adapt the same to the length of the straw upon which it is operating, as explained by the claim.

*Claim.*—Adjusting the reels of harvesters so as to adapt them to the inequalities of height of the straw in a field of grain by means of the arms G G, hand wheel N, chains or cords M M, or equivalent, and pawl lever P, the whole so arranged that the driver can operate the same without stopping the machine, substantially as herein set forth.

No. 46,171.—ENOS D. WOOD, Utica, N. Y.—*Steam Boilers.*—January 31, 1865.—This invention consists in providing within the ordinary steam dome of a boiler an additional dome or pipe, open at the bottom but closed at the top, and perforated throughout its length with small holes, through which the steam passes to the outer dome, from which it passes to the engine. The object of this inner dome, with its perforations, is to extract from the steam any water that may be held in suspension by it, and any foreign substances that may be carried up to it by the steam in consequence of priming in the boiler, or from any other cause.

*Claim.*—The domes A C, or their equivalent, constructed and arranged in combination, substantially as described, for the uses and purposes mentioned.

No. 46,172.—ABRAHAM WORMSER, New York, N. Y.—*Shirts.*—January 31, 1865.—The bosom being omitted in the construction of the shirt, a detachable bosom is made, with button holes around its edge or border, the shirt having corresponding buttons. The band attached to the bosom passes around the neck, and its two ends are buttoned to each other and to the shirt at the back of the neck.

*Claim.*—First, combining with a shirt made without a bosom a removable bosom attached around the edges to such shirt as specified.

Second, forming the neckband or band upon said bosom, to button or be attached to the shirt at the back of the neck, as set forth.

No. 46,173.—JOSEPH YATES, Mott Haven, N. Y.—*Low-water Detectors.*—January 31, 1865.—The object of this invention is to indicate in steam generators the height of water, and to give notice of its diminution to a dangerous extent, with unerring certainty. It consists also in the combination and arrangement of the float, chest, rod and lever, and also elastic diaphragm and lever.

*Claim.*—First, the combination and arrangement of the float D, the chest C, the rod E, lever F, and the rods H H, substantially as and for the purposes set forth.

Second, the elastic diaphragm or diaphragms I, in connection with the levers F, rods H H, and the lever G, substantially as and for the purpose specified.

No. 46,174.—SAMUEL K. ABBOT, Salem, N. H., assignor to JOEL D. CHAMPION, Nashua, N. H.—*Shoe Last.*—January 31, 1865.—The last is divided into two parts, the main last and the instep block, the latter of which is provided with a pin which fits into a corresponding hole in the former. The two ends of a bow spring are fastened to the main last, one on each side. In applying the instep block to the main last the spring is elongated by pressure until the block descends into its seat, when it returns by its elasticity to bind directly upon the heel of the block.

*Claim.*—The instep block fastener, composed of the bow spring e and the strap d, arranged with respect to one another and the remainder of the last, substantially in manner and so as to operate as described.

No. 46,175.—GEORGE N. BOLLES, assignor to S. W. WALKER & Co., Kalamazoo, Mich.—*Washing Machine.*—January 31, 1865.—This invention consists of an ordinary wash tub, set in a suitable frame and rotated by gearing, a follower being arranged in the tub, between which the clothes are placed.

*Claim.*—The rotating or reciprocating rotating tub G, in combination with the self-adjusting or rising and falling follower H, the guide bar J on the framing A, uprights I on the follower H, hinged bar K, and catch bar L, all arranged substantially as and for the purpose specified.

No. 46,176.—CHARLES F. BRAND, assignor to HARRIS BROTHERS & Co., Philadelphia, Penn.—*Ears for Paint Cans*.—January 31, 1865.—This invention consists in so constructing the ears of a paint can that they may serve as a slip to confine the top to its place.

*Claim*.—Combining the slips *a a* with the ears *D D* of paint cans, substantially in the manner and for the purpose above described.

No. 46,177.—W. H. BURRIDGE, Cleveland, Ohio, assignor to ADAMS, JEWETT & Co.—*Fruit Basket*.—January 31, 1865.—This invention consists in constructing the basket or bag of two pieces of paper, all the edges of which are straight, and the angles all right angles.

*Claim*.—The herein-described article, when made and formed substantially as and for the purposes set forth.

No. 46,178.—WM. F. COCHRANE, assignor to himself and WARDER & CHILD, Springfield, Ohio.—*Harvester*.—January 31, 1865.—This invention will be understood by inspection of the claim and engraving.

*Claim*.—First, the combination of the girder slide pieces *a a'* with the end brackets *C C'*, and middle brackets *i2*, substantially in the manner described, for the purposes set forth.

Second, constructing the frame brackets *C C'* and *i2*, substantially as described, for the purpose of adapting them to either a right or left hand machine.

Third, constructing and arranging the sides *A A* of the frame, substantially in the manner described, so as to permit them to be reversed and shifted from one side to the other in order to change from a right to a left hand machine, or *vice versa*, as set forth.

Fourth, the combination of the trifurcated brace *R* with the inner shoe tongue and frame, substantially as and for the purpose described.

Fifth, the combination of the driver's seat and footboard pivoted on the post *U*, and connected by the rod *t* with the gauge bar *v*, as and for the purpose described.

No. 46,179.—WM. F. COCHRANE, assignor to himself and WARDER & CHILD, Springfield, Ohio.—*Harvester*.—January 31, 1865.—This invention consists in mounting the crank shaft, which imparts motion to the cutters, in swivelling bearings and between the bars of the girder side beam in such a manner as that the frame shall protect the said shaft, while at the same time the twisting of the frame will not bind or strain the gearing. It further consists in a particular construction and arrangement of shell brackets for supporting and protecting the gearing, and also in the manner of combining the driving wheel and frame, whereby the teeth of said wheel are made to serve as a rack upon which to raise and lower the frame.

*Claim*.—First, mounting the crank shaft in swivelling bearings, substantially in the manner described, for the purpose set forth.

Second, the combination of the shell bracket *M* with the level wheel *N* and pinion *o*, as described, for the purpose of protecting the gearing.

Third, arranging the crank shaft between the frame timbers *a a* and within the bracket *C'* as and for the purpose described.

Fourth, mounting the counter shaft in the brackets *I M*, constructed in the manner described and for the purposes specified.

Fifth, the combination of the driving wheel, spur pinion, pinion shaft, and nut *J*, with the main frame, substantially in the manner described, for the purpose of raising the frame as described.

No. 46,180.—WM. F. COCHRANE, assignor to himself and WARDER & CHILD, Springfield, Ohio.—*Harvester*.—January 31, 1865.—This invention relates to the particular manner of mounting the drive wheel in the frame, to the manner of combining the brackets which support and protect the gearing with the frame, and to the means of holding the frame at any desired elevation from the ground, as explained by the claim.

*Claim*.—First the combination of the driving wheel, tubular axle, sleeved radius bars, and main frame, substantially as and for the purposes described.

Second, the shell brackets *II'*, constructed and combined substantially as and for the purpose as described.

Third, the combination of the shell brackets and main frame, substantially as and for the purpose set forth.

Fourth, the combination of the radius bars, shell brackets, and panels and ratchets, substantially as described, for the purpose of holding the frame at any desired elevation, as set forth.

No. 46,181.—WM. F. COCHRANE, assignor to himself and WARDER & CHILD, Springfield, Ohio.—January 31, 1865.—*Harvester*.—A brief description of this invention other than that contained in the claim is impracticable.

*Claim*.—First, a vibrating slotted link or guide, which embraces the arm or stall of a vibrating sweep rake, and positively controls the movements of the rake, substantially in the manner and for the purpose described.

Second, the combination of an automatic rake with a vibrating slotted link or guide and gravitating stop latch, substantially in the manner described, for the purpose set forth.

Third, the combination of the rake arm with the swivelling socket or collar *f*, substantially as described, for the purpose of varying the angle of the rake teeth relatively to the platform, as specified.

Fourth, mounting a vibrating slotted link or guide, which positively controls the movements of an automatic rake, on an adjustable stud *g'*, as described, for the purpose of varying the path of the rake, as set forth.

Fifth, the combination of an automatic vibrating sweep rake, a vibrating guide, and a tension brake, for the purposes both of diminishing the force with which the rake strikes the gavel and of holding the rake down upon the gavel when raking off.

Sixth, driving an automatic rake through the centre of the driving wheel and from the outer side thereof, substantially as and for the purposes described.

Seventh, the combination of the pinions *d d1 d3 d4*, as described, for the purpose of varying the speed of the rake, as set forth.

Eighth, a tension brake to regulate the force with which an automatic vibrating sweep rake drops upon the platform.

No. 46,182.—WM. F. COCHRANE, assignor to himself and WARDER & CHILD, Springfield, Ohio.—*Harvester*.—January 31, 1865.—This invention consists in combining a swan-shaped, vertical frame, of particular construction, with the horizontal frame, whereby a strout, rigid frame is secured, and at the same time one which can readily be raised or lowered without deranging the gearing.

*Claim*.—The combination with the horizontal main frame of a harvester of a swan-shaped vertical frame C, substantially in the manner described, for the purposes set forth.

No. 46,183.—WM. F. COCHRANE, assignor to himself and WARDER & CHILD, Springfield, Ohio.—*Harvester*.—January 31, 1865.—This invention relates to the particular arrangement of gearing for operating the rake, and to the manner of mounting the gearing in an independent, rigid frame or bed plate, which is so secured to the main frame as to admit of a ready removal or attachment of the same.

*Claim*.—First, the combination of the spur wheel E, idle wheel F, and pinion G with the crank shaft G', substantially in the manner described, for the purpose set forth.

Second, mounting the rake gearing in the detachable frame or bed plate H, as described, for the purpose set forth.

No. 46,184.—CHARLES DEAVS, assignor to E. P. ARCHER and GEORGE PANCOAST, New York, N. Y.—*Portable Lanterns*.—January 31, 1865.—This invention consists in the combination of a tube, provided with a spring to receive a candle, with a case having a glass front, in such a manner that the tube may be shoved entirely within the case when the lantern is not in use, and so adjusted, by drawing out the tube, that it may serve as a handle when the lantern is in use. There is a cover over the glass, which protects it when not in use, and is capable of being raised so as to serve as a reflector when the lantern is in use.

*Claim*.—The combination of the candle tube E with the lantern case A, when the tube is arranged so as to slide within the case, and capable of being shoved entirely within it and drawn out wholly or partially from it, substantially as and for the purpose herein set forth.

No. 46,185.—ALEXANDER W. HALL, New York, N. Y., assignor to ALMON and ALBERT HALL, Columbus, Ohio.—*Churns*.—January 31, 1865.—The dasher in this churn is a fixture, and the body of the churn is caused to oscillate thereon.

*Claim*.—The fixed attachment of the dasher of a churn to a stationary support, and the suspension of the tub, box, barrel, or body of the churn in such relation to the stationary dasher that it and the contained milk may receive the necessary motion to produce the separation of the butter from the milk, substantially as herein described; or, in other words, a churn with a stationary dasher and a movable body, substantially as herein set forth.

No. 46,186.—PHILO W. HART, Stamford, N. Y., assignor to THE DALTON KNITTING MACHINE COMPANY, New York, N. Y.—*Stop-motion for Circular Knitting Machines*.—January 31, 1865.—This invention is designed as an improvement on Dalton's patent, No. 43,294. The object is to ship the belt and stop the machine when the yarn is nearly all run off the bobbin. Instead of a spring lever, held within a notch in the side of the bobbin, as in Dalton's machine, the inventor uses a slide, secured to a frame beneath the bed-plate, and a pin on this slide is held by the yarn within a notch on the bobbin. When the yarn is nearly all delivered, the pin is released by it, and the centrifugal force of the revolving bobbin stand throws the slide outward and brings a pin thereon into contact with an arm which, with its connections, shifts the belt from the fast to the loose pulley.

*Claim*.—The movable pin or piece *c*, in combination with the slide I, or its equivalent, attached to the bobbin stand, and with a groove or recess in the bobbin, substantially as and for the purpose herein specified.

No. 46,187.—STOUGHTON B. HOLDEN, assignor to himself and L. L. HOLDEN, Woburn, Mass.—*Combined Valise and Seat*.—January 31, 1865.—This invention relates to a combined valise and seat, whereby the valise, when unfolded, may be converted into a seat, with

room to receive and hold different tools or articles required for mechanics, artists, fishermen, &c.

*Claim.*—A combined valise and seat, composed of two parts *a* and *a'*, connected by hinges *b*, one part *a* being provided with a bottom or seat *B*, and the other part with an internal lid *c*, and both parts supported by legs *D* when the device is used as a seat, the legs being removable, and all constructed and arranged as herein described.

No. 46,188.—W. A. HORRALL, assignor to himself and ALBERT W. CROSS, Washington, Ind.—*Brick Machines.*—January 31, 1865.—This invention consists in a mechanism which drives the moulds to the gear wheel on the pressure roller shaft, so that the mould and periphery of the pressure roller shall move in exact unison, by which the passage is facilitated and the clay evenly pressed.

*Claim.*—So connecting the mechanism which drives the moulds to the gear wheel on the pressure-roller shaft that the mould and periphery of the pressure roller shall move in exact unison, by which their passage is facilitated and the clay evenly pressed, substantially as herein described and represented.

No. 46,189.—JOHN W. HUSSEY, assignor to himself and GEO. H. QUINCY, Boston, Mass.—*Machinery for Oiling Wool in Carding Machines.*—January 31, 1865.—This invention consists in a scraper, in the form of an endless belt of slats, which lies beneath the burr box, and by its motion clears the pressure roller of any adhering fibre, while the top feed roller strips the band of any fibre adhering to it and conveys it to the card.

*Claim.*—First, in carding or other wool-preparing machinery, and in combination with the pressure roller of an oiling apparatus of otherwise ordinary or suitable construction, an independent scraper, or its equivalent, so arranged as to keep the pressure roller clear of the wool adhering to its surface.

Second, in combination with the pressure roller of an apparatus for oiling wool as it is fed to carding or other wool-preparing machinery, an endless apron interposed between the said pressure roller and the top feed roller, and moving in the direction of the said rollers, so that the surfaces in contact move in opposite directions, substantially in the manner and for the purposes set forth.

No. 46,190.—SAMUEL JOHNSTON, assignor to himself and RUFUS L. HOWARD, Buffalo, N. Y.—*Harvesters.*—January 31, 1865.—This invention relates to that class of machines which have the finger bar arranged opposite, or nearly opposite, the tread of the drive wheel, and the gearing located within the periphery of said wheel, and it consists in a particular construction and arrangement of the parts, as defined by the claim, whereby the gearing and cutting apparatus are readily raised and lowered together, while preserving the same relation to each other, and without interfering with the free working of the machine.

*Claim.*—First, constructing a harvesting machine, which I call the "Great Western," with the finger beam located opposite or nearly opposite to the tread, and the gearing located mainly within the periphery of the driving wheel, and with the finger beam and gearing so arranged that both can be raised and lowered together to any desired height, and still preserve the same relation to each other and the free working of the same, all constructed and arranged substantially as set forth and for the purposes described.

Second, the standard *m m*, located within the periphery of the driving wheel, the main plate *l l* and the perpendicular line shaft *e e* for supporting the finger beam and gearing and allowing them to be adjusted to the required height, arranged substantially as described and for the purposes set forth.

Third, the perpendicular grooved line shaft, in combination with the feathered clutch, and arranged and constructed as described for the purposes herein set forth.

No. 46,191.—HORACE K. JONES, assignor to THE HART MANUFACTURING COMPANY, Kensington, Conn.—*Machine for Indicating Carpenters' Squares.*—January 31, 1865.—The invention consists in attaching the graters to movable segmental plates or carriers fixed in the periphery of a revolving cylinder, beneath and parallel to the axis of which the blade to be marked is passed. The length of stroke of the graver is regulated by studs projecting from the periphery of the carrier plates coming in contact with an inclined surface of a guide bar, adjustable to or from the axis of said roller.

*Claim.*—First, the method, substantially as described, for cutting the division marks on carpenters' squares and rules.

Second, the toes *i* and yielding beds *D*, in combination with the graters *a*, applied and operating substantially as and for the purpose set forth.

Third, the screw clamps *g*, applied in combination with the graters *a*, substantially as herein specified, for the purpose of holding them in their places and to govern the depth of the cuts.

No. 46,192.—S. LOYD, assignor to himself and W. H. FREAR, Washington, D. C.—*Movable Calks and Toes for Horse Shoes.*—January 31, 1865.—These calks are formed with vertical flanges projecting from their upper surface, on both sides, the outer one having spurs

on top, turning inward to hook over the top of the shoe, the inner one having through it a pointed steel set screw, which being driven against causes an indentation in the shoe, and thereby clamps the calk tightly upon it.

*Claim.*—The calks B B', constructed in the manner herein described and represented, and employed in connection with the screws C C', in the manner and for the object specified.

No. 46,193.—BARNEY MCGINNIS, New York, N. Y., assignor to himself and REUBEN S. TORREY, Brooklyn, N. Y.—*Steam Generators.*—January 31, 1865.—This invention consists in arranging a system of high-pressure boilers in the interior of a double shell, which forms a low-pressure boiler, the two being connected together in such a manner that the inner or high-pressure one can be supplied with water from the outer or low-pressure ones. The two boilers, or system of boilers, have each an outlet pipe for steam, and the steam may be used to propel high and low-pressure engines, as it can be mingled, and all used in one engine.

*Claim.*—First, the system of high-pressure boilers B B', arranged in the interior of the shell or boiler a, in the manner and for the purpose substantially as herein shown and described.

Second, the back flue e, in combination with the double-walled shell a and return flue boilers B, constructed and operating substantially as and for the purpose set forth.

No. 46,194.—JOHN SHIM, assignor to himself and ISAAC STEAD; said STEAD assigns his right to NICHOLAS H. GRAHAM.—Philadelphia, Penn.—*Machinery for Oiling Wool in Carding Machines.*—January 31, 1865.—In this machine the oil rises in the wick by capillary attraction, and is held in suspension in the upper end of the wick, which hangs over a pipe, and may be heated if desired; the ridges of a fluted revolving roller press the ends of the wick gently and wipe out the oil; this roller then carries the oil to the surface of a plain roller, which transmits it by a gentle pressure to the wool upon the feed apron.

*Claim.*—In combination with a wool-oiling apparatus, raising oil from the tank by a wick or capillary attraction, for the above-described purpose.

No. 46,195.—JACOB WEBER, New York, N. Y., assignor to himself, WM. WHARTON, jr., Philadelphia, Pa., and IRA B. SNYDER, New York, N. Y.—*Knapsack.*—January 31, 1865.—This invention consists of a knapsack which is capable of being changed into a couch merely by opening it, being a light metallic frame or skeleton covered with water-proof material.

*Claim.*—First, constructing the frame of a knapsack with jointed and folding sides, connected to a central section C, substantially as above described.

Second, a knapsack which is capable of being turned into a couch, supporting the outer folding rails, both when it is extended and when it is folded up, by means of brackets found on the supports c, substantially as described.

Third, the combination with a folding knapsack, constructed substantially as above described, of a canopy and ribs i, as above set forth.

No. 46,196.—JEAN FRANÇOIS AUGUST AERTS and PAUL FRANÇOIS AERTS, assignors to JEAN FRANÇOIS AERTS, Antwerp, Belgium.—*Lubricator.*—January 31, 1865.—This invention consists of a lubricating box surrounding a journal, so constructed that no foreign substance, such as dust, ashes &c., can penetrate from without, and no portion of the lubricating liquid can escape from within said box containing a reservoir of water, oil, or other liquid, which is conveyed to the rubbing surfaces by a peculiar arrangement of wheel and grooves.

*Claim.*—First, in combination a shaft or axle, a reservoir of water or lubricating liquids or mixtures thereof, a brass or bearing, so grooved or channelled, substantially as described, as to receive and carry water or fluid lubricating material to the rubbing surfaces, and a disk or wheel attached to and revolving with the shaft, so as to carry fluid lubricating material and supply to a brass, the combination operating substantially as set forth.

Second, in combination with an axle or shaft and a reservoir of water a channelled brass and a rotating disk and a close box, preventing the entrance of dust and the escape of water, and in which the joint between the box and the axle is closed by packing rings, applied substantially as described.

Third, in combination with a packing ring, making a joint with an axle, a concave or dishing protector attached to or making a part of a wheel or an axle, and acting substantially as described.

Fourth, in combination with a box and a reservoir of water a guard-plate or disk, making a partition between the front enclosure of the box and a water-lifting apparatus, substantially as described.

No. 46,197.—JOHN LYON FIELD, Lambeth, England.—*Manufacture of Moulded Candles.*—January 31, 1865.—This invention consists in making the lower end of a moulded candle of a tapering or conical form, so that it may fit various sized sockets of candlesticks without cutting or wrapping the candle.

*Claim.*—A moulded candle, the lower end of which is made of a tapering form, substantially as represented and described, for the purpose set forth.

No. 46,198.—JAMES WEBSTER, Birmingham, Eng.—*Manufacture of Zinc*.—Patented in England May 18, 1864.—This invention consists in passing zinc ore through molten iron. The zinc ore and nitrate of soda, in a finely divided state, are placed in a chamber situated above an ordinary cupola furnace, such as is used in smelting iron; from this chamber the zinc ore and nitrate of soda are conducted to another chamber by means of a channel, which is provided with a feed-screw at its lower end. The chamber contains the molten iron, and communicates with the interior of the furnace by means of a passage, and also communicates with a vessel containing water by means of a pipe. The molten iron passes under the inverted bridge and escapes, and the volatilized zinc passes through a tube into the water contained in the vessel.

*Claim*.—Extracting zinc from its ores by causing the latter to be brought into contact with molten iron or other metal in a close vessel.

No. 46,199.—THOMAS CROSSLEY, Bridgeport, Conn., assignor to THE AMERICAN WATER-PROOF CLOTH COMPANY, Brooklyn, N. Y.—*Flocked Cloth, Dyed or Printed*.—January 31, 1865.—The base is cotton, wool, silk, hemp, jute, or other material, coated with vulcanized or unvulcanized India-rubber by itself or in combination with lead, litharge, sulphur, or other material. The coating may also be gums, linseed, or other oils, varnishes, &c. The said base, after being thus coated, is covered with flocks or dust of wool, silk, cotton, fur, or other fibrous material.

*Claim*.—An article or fabric prepared, dyed, and printed, or either prepared, dyed, or printed, with a face of flocks of wool, silk, fur, or other material possessing the character and qualities herein set forth, as a new manufacture.

No. 46,200.—THOMAS CROSSLEY, Bridgeport, Conn., assignor to THE AMERICAN WATER-PROOF CLOTH COMPANY, Brooklyn, N. Y.—*Dyeing, Printing, and Manufacturing of Water-proof Cloth*.—January 31, 1865.—This invention consists of a new and improved manufacture, the result of the process of dyeing and printing, which is the subject of a patent to the inventor.

*Claim*.—The process, substantially as herein before described, of preparing, dyeing, and printing goods having a surface of flocks of the character herein before described.

No. 46,201.—EDGAR B. ADAMS, ROBT. P. TRIMBLE, and HORATIO N. ADAMS, Salem, Ohio.—*Rotary Engine*.—February 7, 1865.—This invention relates to a combination of parts, consisting of an annular case made steam-tight by heads which are bolted to the ends of a ring. Within this case is another annular ring, which has radial arms extending inwards to the hub through which the shaft passes. To these arms an eccentric is fixed, which works within an elongated yoke for giving motion to the pistons, which work through slots in the revolving ring, and are pressed out against the inner periphery of the case, except where they pass the abutment placed between the revolving ring and the case, when they are withdrawn by the eccentric arranged for that purpose. The steam is admitted near the abutment behind the piston, and forces it around nearly to the abutment again, when it is exhausted through apertures formed for that purpose.

*Claim*.—First, the combination of an eccentric hub D, having a groove *g* formed in it, with the revolving ring B, elongated yoke A, and sliding pistons *b b'*, operating substantially as described.

Second, the application of springs *s s'* to piston rods *e e'*, which are connected to a yoke E by means of pins *f f'* working in slots *i i*, substantially as described.

No. 46,202.—DAVID C. ALDRICH, Anamosa, Iowa.—*Churn*.—February 7, 1865.—This invention consists in the employment of two dashers, perforated partition plates, an air tube, and a water chamber, all arranged in such a manner as to cause butter to be rapidly produced in good condition, and to separate the butter from the buttermilk.

*Claim*.—The partition plates B B, perforated at their lower ends, and provided with an oblong opening *g*, in connection with the air tube H in the central compartment *e*, and the dashers D C in the compartments *d d*, all arranged to operate substantially as and for the purpose herein set forth.

Also, the concave surfaces *a\** of the dashers, in connection with the upper inclined surfaces *b\**, the perforated partition plates B B, and the air tube H, for the purpose specified.

Also, the water chamber *b*, in combination with the perforated partition plates B B, dashers C C, air tube H, and thermometer I, as and for the purpose set forth.

No. 46,203.—JOHN H. AMES, Baltimore, Md.—*Steam Boiler*.—February 7, 1865.—This invention relates to an arrangement of parts, by means of which a portion of the steam is suspended, and a portion used in its normal condition. It consists in the arrangement of an ordinary tubular boiler, with an additional number of tubes, a portion of which is submerged while the remaining portion pass through the steam space and superheat the steam in the portion of the boiler in which they are located. Two diaphragms are placed over the fire-box in such a manner that the steam generated in a portion of the boiler is to some extent separated from the superheated steam in the other portion, and a valve is placed (in a pipe leading to

the main steam pipe to regulate the passage of the saturated steam on its way to the main pipe, where it mingles with the superheated steam.

*Claim.*—First, the arrangement of flues E' E', substantially as and for the purposes set forth.

Second, producing superheated and saturated steam in a boiler and separating these two forms of steam from each other without injuriously interrupting the water level, substantially as described.

Third, mixing together superheated and saturated steam in the steam pipe within the boiler, substantially as described.

No. 46,204.—PETER ANDREW, Cincinnati, Ohio.—*Machine for separating Grease, Lard, and Tallow from the refuse of Rendering Tanks.*—February 7, 1865.—This invention consists of a vat, provided with perforated steam pipes at its bottom and a perforated water pipe on one side at the top. Opposite this water pipe on the other side is a trough. Near the top of the vat is a screen made of separate frames and hinged together, each screen being covered with fine wire-cloth. The water and grease rise through the screen and flow into the trough, from whence they are conducted to the trap, where the water sinks to the bottom and rises again through the passages and overflows to the trough, when it is carried off by the pipe.

*Claim.*—First, the trap B, arranged as specified and shown, operating substantially in the manner described, for separating the grease from the water, and for the separation of liquids of unequal specific gravity.

Second, the use of wire-screens, substantially as described and set forth, for the separation of lard, tallow, or grease from the refuse or slush taken from steam-rendering tanks, and for the separation of any liquid having no affinity for water, and of less specific gravity, from any substance that is not liquid.

Third, the trough or gutter D, for the purpose of skimming the grease from the surface of the water in the vat, as specified and in the manner described.

Fourth, the perforated water pipe F, for the purpose of lifting the grease above the screens until it flows into the trough D, and for continuing the flow and driving it into the trough, substantially as described and shown.

Fifth, the bottom of the vat, formed and arranged as described and for the purpose set forth.

No. 46,205.—STEPHEN J. AUSTIN, Freeport, Me.—*Presses.*—February 7, 1865.—This invention consists of a press-box, one side of which is made movable, and is fitted in suitable grooves and connected by ropes to a windlass in such manner that by turning said windlass in one direction the movable side is thrown open and closed by turning the windlass in the opposite direction, the ropes being always taut.

The follower is operated by two levers, the inner ends of which are hinged thereto and connected to ropes or chains which extend over pulleys secured to the frame, thence down under pulleys near the inner end, and over pulleys in the outer ends of said levers, and to a windlass in such a manner that by the action of said ropes the levers are started from a horizontal position without requiring any attention from the operator. In order to take up the extra amount of chain, those used for operating the levers and followers extend over two drums geared together so as to rotate in opposite directions.

*Claim.*—First, the expanding press-box B, constructed substantially as and for the purpose described.

Second, the ropes or chains *d d' e*, pulleys *g g' h h' i m*, and windlass *j*, applied in combination with the movable side *a* of the press-box B, in the manner and for the purpose substantially as herein set forth.

Third, the pulleys *q q' r r' s s'* and *t t'* applied in combination with the chains *o o'*, levers D D', and follower C, in the manner and for the purpose substantially as shown and described.

Fourth, the double drums *u u'*, in combination with the chains *o o'*, levers D D', and follower C, applied and operating substantially as and for the purpose set forth.

No. 46,206.—JOHN M. BATCHELDER, Cambridge, Mass.—*Vessel for holding Petroleum.*—February 7, 1865.—This invention consists in applying to the inside of vessels for holding petroleum a paint consisting of a solution of gelatine and pulverized bone-dust boiled together.

*Claim.*—A barrel or other vessel having a lining or interior coat, formed substantially as herein described and for the purpose specified.

No. 46,207.—FORDYCE BEALS, New Haven, Conn.—*Carriage Retractor for Breech-loading Fire-arms.*—February 7, 1865.—The retractor is adapted to arms in which the barrel is moved forward from the breech, and consists of a spring dog, or hook pivoted to the stationary stock, so that on sliding the barrel forward the said hook not only retains the cartridge case against the stationary breech in connecting with a notch in the hammer, but by means of the spring causes the cartridge case to be thrown from the arm as soon as it is entirely withdrawn from the barrel.

*Claim.*—First, the hammer F, provided with the notch *l m*, in combination with the ejector G, when constructed and operating as herein set forth.

Second, the spring H, when constructed and arranged to operate in combination with the ejector G, as and for the purpose set forth.

No. 46,208.—E. B. BINGHAM, Newark, N. J.—*Process for Manufacturing Twine from Paper.*—February 7, 1865.—The claim defines the nature of this improvement. Shellac varnish, or shellac dissolved in alcohol, is used as a suitable sizing.

*Claim.*—In the manufacture of twine from paper, adding a water-proof sizing to the paper pulp, or applying the same to the paper while the latter is in a moist or green state, on the frame or web, previous to its passage through the final heated pressure cylinders, and previous to its being cut into strips and receiving its twist, as herein set forth.

No. 46,209.—CHARLES L. BISHOP, Meriden, Conn.—*Moulders' Bench.*—February 7, 1865.—This invention consists of a bracket composed of an upright, a brace, and two horizontal arms, forming the platform or table, all of cast iron, and so constructed as to be readily taken apart and adjusted to suit the height of the workman using it.

*Claim.*—A moulders' bench, composed of a bracket A, ribs *a*, and cleats *d*, horizontal arms B, and brace C, all constructed and fitted together in the manner substantially as herein set forth.

No. 46,210.—ERASTUS BLAKESLEE, New Haven, Conn.—*Mess Kit.*—February 7, 1865.—This invention consists in fastening a frying pan to the bottom of a camp coffee-pot by passing the handle of the pan up through a hole made in the handle of the coffee-pot, and then catching it by passing the end of the bail through a hole in its upper end, for convenience of transportation.

*Claim.*—Attaching the pan to the kettle in the manner and for the purpose substantially as herein set forth and described.

No. 46,211.—JOHN M. BROWN, Portland, Maine.—*Tobacco Stopper.*—February 7, 1865.—A cover for the pipe bowl is provided with a hole in the centre and with spring arms fitted to shoulders to prevent the cover from slipping into the pipe. A stopper is attached to the lower end of a rod passing through the hole in the cover. Above the cover the rod is surrounded with a spiral spring, so that when the stopper is forced down on the tobacco in the bowl the spring may withdraw it.

*Claim.*—First, the pipe cover, perforated at the centre, and fitted with spring arms, having shoulders, substantially as and for the purposes described.

Second, the stopper or plunger, in combination with the rod and spiral spring, substantially as and for the purposes enumerated.

Third, the combination of the detachable cover, as described, with the spring stopper or plunger, as described.

No. 46,212.—MORGAN W. BROWN, New York, N. Y.—*Handle for Lamp Chimney.*—February 7, 1865.—This invention consists in the construction of separate handles, as an article of manufacture, to be attached to lamp chimneys or not, at pleasure.

*Claim.*—A metallic handle, formed as set forth, to clasp upon and be attached to an ordinary glass chimney, in the manner and for the purpose specified.

No. 46,213.—BENAJAH J. BURNETT, Mount Vernon, N. Y.—*Crane.*—February 7, 1865.—This invention relates to cranes in which the whole weight of the jib, with the body to be lifted, is received on the top of a supporting tower, around which the jib is capable of revolving. It consists in constructing said tower of cast iron; also, in a mode of supporting on the top of the tower the revolving cap or head from which the whole weight of the jib and its load is suspended; also, in a construction of what is termed the circular traveller, which revolves around the lower part of the tower and on which the weight of the jib is suspended from the revolving cap or head, and by which the horizontal thrust of the lower part of the jib is transmitted to the lower part of the tower.

*Claim.*—First, the cast-iron tower or column, of one or more pieces in height, with bottom flanges or base *a*, vertical cylindrical surface *d*, and shoulder *f*, all substantially as and for the purpose herein specified.

Second, the construction of the top of said tower, substantially as herein described, with a seat in its interior for the reception of the lower ring *i* of the box which contains the anti-friction balls upon which the cap or revolving head of the crane is supported.

Third, the cast-metal cap or revolving head C, provided with ribs or inverted brackets *k k*, for the reception of the sheave and tension bar pins *l m*, and central downwardly-projecting journal *p*, entering the box which receives the anti-friction balls upon which the said cap or head is supported, and receiving upon it the upper ring *i* of the said box, all substantially as herein specified.

Fourth, the annular box for the reception of the anti-friction balls which support the cap or revolving head C, constructed of two rings *i i*, the one forming the bottom and outer

sides of the box, fitted into a seat in the top of the tower or column, and the other forming the top and inner sides of the box, fitted to the journal of the cap or revolving head, substantially as described.

Fifth, the construction of the circular traveller B, with a flange for the reception of the suspending side branch rods, and with bearings for the reception of the jib shoes and counter-weight sills, so that each thrusts against the other, and a rolling joint is provided for the said shoes to permit the adjustment of the jib, all substantially as herein set forth.

Sixth, the branch side rods for suspending the circular traveller from the revolving head or cap, constructed with their upper parts single, as shown at G, and with their lower parts in two or more branches, as shown at *q q q* in figure 1, and combined with the cap or revolving head and traveller, substantially as herein described.

No. 46,214.—CHARLES W. CAHOON, Portland, Maine.—*Bottle for Oil*.—February 7, 1865.—This invention consists of a block of wood bored nearly through, with the shoulder near the top to support a stopper. The bottle is coated on the inside with a mixture of hot linseed oil and colophoney, or it may be coated with a solution of glue in water.

*Claim*.—First, a wooden bottle, made by boring a solid block of wood, and fitted with a stopper, rendered impenetrable to liquids, substantially as herein described.

Second, fastening a stopper into a bottle by means of a button, the ends of which fit into niches, substantially as described.

Third, a bottle having a shoulder and a flaring neck, in combination with a straight-side, uniform stopper, as herein described.

Fourth, a bottle fitted with channels, as herein described.

No. 46,215.—H. W. CATLIN, Burlington, Vt.—*Whip-socket Fastening*.—February 7, 1865.—This invention relates to a whip-socket fastening for vehicles. It consists in the employment of two washers, in the centre of which a screw passes, first through one of the washers, then through the dash board, then through the other washer, and is finally fixed in a socket.

*Claim*.—The washer B in combination with the screw C, passing through the dash D into the socket A, to be arranged substantially in the manner as and for the purpose set forth.

No. 46,216.—NORMAN CHAPPELL, East Avon, N. Y.—*Bean Harvester*.—February 7, 1865.—This invention relates to a machine for harvesting beans. Colters are attached to the frame in front of the cutters, which pass between the rows and separate the tops. The cutters pass under the ground two or three inches, thereby throwing the beans backward upon skeleton clearers of a conical form which are attached by links to the cutters.

*Claim*.—The clearer or clearers H, in combination with the cutter or cutters G, and a suitable frame A, arranged and operating substantially as herein set forth.

Also, in combination with the clearers H, cutters G, and frame A, the colters I, arranged and operating substantially as herein specified.

No. 46,217.—JOHN R. CROSS, Chicago, Ill.—*Packing for Oil Wells*.—February 7, 1865.—The object of this invention is to pack the space between the sides of the well and the pipe through which the oil is ejected, and thereby prevent water from passing to the oil below and admit of adjustment from outside of the well, so as to compress or relax the packing at pleasure, and enable the packing to be removed and adjusted at various points of the well without involving the loss or destruction of it. Its novelty consists in the arrangement of a fibrous or elastic substance in combination with rings, whereby, through the agency of screw rods, the rings are made to approach each other and the packing thereby be compressed so as to fill the space between the tube and sides of the well.

*Claim*.—The arrangement for artesian oil wells of a fibrous material D, consisting of hemp or other elastic substance, in combination with the rings A A', or other suitable frame therefor, so arranged that when said rings approach each other the packing material is compressed laterally, so as to fill the space between the tube and sides of the well, and relaxed when the rings are made to recede, the same being operated from the top of the well by the screw rods *d d*, substantially in the manner and for the purpose set forth.

Also, in combination with said packing device, the valve *f*, and tube *g*, operating in the manner and for the purpose herein set forth.

No. 46,218.—T. D. DAY, New York, N. Y.—*Ladies' Dress Protector*.—February 7, 1865.—This invention consists of a broad lining or facing of any suitable material, to be attached to the inside of the lower extremity of the skirt, which is first distended by spring wires or other suitable springs passing in and out in the direction of its width, the material being clamped at the end of the springs. Thus prepared, the facing is tacked in place.

*Claim*.—An interior lining or facing for the lower edge of the skirt of ladies' dresses or other garments, formed with springs introduced in the manner and for the purposes specified.

No. 46,219.—JOHN N. DENNISON, Newark, N. J.—*Fire Engine*.—February 7, 1865.—This invention consists in placing a valve in the partition between the pump cylinder, in such

a manner that when the valve is opened the two ends of the pump cylinder next the partition come in operation, the water passing from one to the other through the aperture closed by the valve, instead of being forced out by the cylinder into the delivery pipe. By this arrangement the effective area of the pump attached to steam engines is regulated according to the length of hose to be used, or the number of streams of water to be thrown.

*Claim.*—The increasing or diminishing the effective area of the pump or pumps by means of a valve placed in the partition between them, or other means, substantially the same as when attached to the steam fire-engines, so that the quantity of water discharged at a stroke can be increased or diminished at pleasure without altering speed or stroke, for the purposes herein set forth.

No. 46,220.—ARTHUR DE WITZLEBEN, Washington, D. C.—*Ball Screw for Fire-arms.*—February 7, 1865.—This invention relates to a bullet extractor, having two spring jaws with auger-like points, and the novelty consists in forming on the inside of the piercing points a projecting edge, or screw-like thread, for more effectually preventing the bullet from slipping from the grasp of the spring jaws in attempting to draw the same from the barrel of the fire-arm.

*Claim.*—The tines or jaws *b b*, with their threads or shoulders *a a*, forming in combination the concave screw for the uses and purposes as above described.

No. 46,221.—M. P. DORSCH, New York, N. Y.—*Paper-covered Wooden Boxes.*—February 7, 1865.—This invention consists of a round or oval box made of wood veneering, the side being lapped and glued, the bottom, when inserted, being held by a narrow strip of glued paper so laid along the angle on the outside as to be attached to both parts. The box is then covered with paper. The top is made in like manner, except that it is large enough to fit outside the upper part of the box.

*Claim.*—A box for collars and similar articles, made of a thin veneer of wood, with the top and bottom pieces secured to the sides by a strip of paper and other similar material glued around the said edges, and the box covered with paper, as specified, the whole forming a new article of manufacture.

No. 46,222.—JAMES B. EADS, St. Louis, Mo.—*Operating Guns in Turrets.*—February 7, 1865.—Guns with their carriages are mounted on a revolving platform, and are operated by a system of gearing, acting through the shaft on which the platform revolves, or acting concentrically therewith, whereby the guns are trained and operated, whether the platform revolves with the turret in which it is placed or independently of said turret.

*Claim.*—First, mounting a gun or guns upon a rotary platform, arranged to bring the muzzles of the guns to different ports in the turret or defence within which it rotates, when the power which operates the guns is communicated through devices acting concentrically with the axis of rotation of said platform.

Second, mounting guns on a rotating platform, which is arranged to rotate with a turret, when the power to operate the guns on said platform is conveyed to them through mechanical devices acting concentrically with the axis of said platform's rotation.

No. 46,223.—JAMES B. EADS, St. Louis, Mo.—*Operating Guns and Gun Turrets.*—February 7, 1865.—The platform on which the ordnance is mounted is arranged to be capable of rotating independently of the turret; and the power employed in training and deflecting the guns is transmitted through the pivot of the rotating platform, so that all the necessary adjustments may be made separately or together, as desired.

*Claim.*—First, the use of a rotating tower, in combination with a rotating gun platform, when each is arranged to rotate independently of the other.

Second, the combination in one turret of devices for training ordnance operated by means of power transmitted through the pivot or shaft of the platform on which the ordnance is mounted, with a rotating platform and a rotating tower, each arranged in such a manner that the training of the guns, the rotating of the platform and the revolving of the tower, may be performed independently of each other, substantially as described.

No. 46,224.—JOHN E. DOW, Boston, Mass.—*Bread and Meat Slicer.*—February 7, 1865.—This invention consists of a plate or gauge attached to a carving or table knife by a clamp and set screw, and so arranged that it may be adjusted to different thicknesses for slicing bread and meat.

*Claim.*—The application and arrangement of the slicer in the mode above described, or substantially the same.

No. 46,225.—WILLIAM H. ELLIOTT, Plattsburg, N. Y.—*Revolving Fire-arms.*—February 7, 1865.—This invention relates to the cylinder of a revolver, and consists in forming it in two sections by a dividing line passing through the series of chambers, but leaving the breech plate connected with the outer segment or annulus of the cylinder.

*Claim.*—First, dividing the cylinder *a* through its circle of chambers into two concentric parts, and having the recoil plate or breech permanently attached to the outer section, so that

the core or central portion may be drawn out in a forward direction, for the purpose of introducing the cartridges, substantially as herein described.

Second, charging the cylinder of a revolving pistol by first introducing the cartridges into the centre of it, and then by pushing them in a lateral direction to their places, as herein described.

No. 46,226.—CHARLES W. EMERY, Dorchester, Mass.—*Machine for Clipping Hair or Wool from Animals*.—February 7, 1865.—This invention consists in the employment of guards placed beneath a rotating cutter for the purpose of keeping the hair or wool erect while being cut.

*Claim*.—The upper guard i, for holding the hair or wool erect to facilitate the cutting, as herein set forth.

No. 46,227.—CHARLES ENGELSKIRKEN, Buffalo, N. Y.—*Lanterns*.—February 7, 1865.—This invention consists in an expanding and contracting button placed on the shaft for raising and lowering the wick tube of lanterns, and projecting through the case of the lantern, so as to be grasped and contracted within, when the lamp is to be removed.

*Claim*.—The expanding and contracting button F, constructed and operating for the purposes and substantially as described.

No. 46,228.—JOHN FARRELL, New York, N. Y.—*Fire-proof Safe*.—February 7, 1865.—This invention consists in making the filling for safes of Epsom salts alone, or combined with plaster of Paris or other suitable material—one part sulphate of magnesia to two parts of sulphate of lime.

*Claim*.—The employment of sulphate of magnesia in filling in the fire-proof chambers of safes, chests, and other like structures, when prepared and put in, substantially as and for the purpose specified.

No. 46,229.—H. E. FESSEL and F. KRAUTWADI, Chicago, Ill.—*Trip Hammer*.—February 7, 1865.—In this invention the hammer strap is drawn upward by means of two pulleys, which are brought together so as to compress the strap between them. One of these, the driving pulley, is fast upon its axle and turns in fixed bearings, while the other turns loosely upon an eccentrically journalled axis, arranged also in fixed bearings, but so as to be incapable of turning therein except as force is applied to it to effect that object. To one end of the latter shaft there is attached a horizontal arm, the outer end of which is connected to a hand lever or treadle by a connecting rod. By means of these appliances the eccentrically journalled shaft can be turned at will, so as to remove its roller from contact with the strap, and allow the hammer to fall through any length of spaced desired, within the limits of the machine.

*Claim*.—The combination and arrangement of the devices *e f g*, constituting both a tripping and adjusting contrivance, with the friction rollers *c c'*, crank shaft E, and hammer F C, in the manner and for the purpose described.

No. 46,230.—NATHANIEL C. FOWLER, Yarmouth, Mass.—*Combining Aluminum with Vulcanite and other Materials*.—February 7, 1865.—This invention consists in combining or mixing granulated aluminum with vulcanizable compound, and then vulcanizing in the usual manner; also in inlaying articles of vulcanite with aluminum, and also in joinings, clasps, &c., of rubber articles of aluminum; also in making tacks, nails, &c., for rubber shoes of aluminum. Heretofore only gold and platinum have been used in the manner proposed in this invention, since the sulphur in the vulcanite compound corrodes any of the other metals. This difficulty does not occur with aluminum, and it has the advantage over gold and silver in applications such as dental plates of great lightness.

*Claim*.—First, so combining granulated aluminum with vulcanite or rubber or analogous material, such as gutta-percha, forming a compound or composition of matter, substantially as described.

Second, the use of aluminum for the purpose of forming the joining of articles made of vulcanite, for attaching rubber or vulcanite to other material, and for inlaying and ornamenting articles of vulcanite.

Third, the use of vulcanite for the purpose of attaching articles made of aluminum to other materials, or to other articles made of aluminum.

Fourth, inlaying articles made of aluminum with vulcanite, and imitating articles made of aluminum by a clasp, rivet, or other fastening or ornamental device made of vulcanite.

No. 46,231.—THOMAS W. GOODWIN, Portsmouth, Va.—*Lubricator*.—February 7, 1865.—This invention consists of a tube descending from the flaring receptacle of oil, and receives a transverse cock plug which determines the course of the current by permitting it to flow in a straight line, or connecting the reservoir with the upper or lower portion of the pipe, at the direction of the operator; the plug having at its end a side perforation communicating with a central bore to the end for the escape of steam, when the cock is so set as to permit the influx of the oil.

*Claim.*—First, the arrangement, within a lubricator, of a single cock having three or more openings arranged in such a manner as to make an induction and eduction passage, when used as and for the purposes herein described.

Second, in combination with a lubricator, the mode of charging and discharging the reservoir, by means of a single cock arranged within a lubricator, when used substantially as described.

No. 46,232.—SOLOMON S. GREG, Boston, Mass.—*Ladies' Paper Collar.*—February 7, 1865.—This invention consists in the collar being fluted transversely and made gently contractile, except on about one-fifth its width along what is intended for the inner edge, where it is more rigidly crimped; it is thus made to assume and retain a circular form, having the rigid crimping at its inner periphery.

*Claim.*—As a new article of manufacture, a paper or cloth and paper collar, to which the requisite curve or shape is given by contracting one of its edges, substantially as described.

No. 46,233.—HOLMAN J. HALE, New York, N. Y.—*Tobacco Paper.*—February 7, 1865.—This invention consists in coating thin sheets of paper on one or both surfaces with fine particles of waste tobacco, by means of some adhesive substance.

*Claim.*—Tobacco paper made substantially as above described.

Also, the use of tobacco paper, made substantially as described, in the manufacture of tobacco cartridges and tobacco rettes made from said material, substantially as above set forth.

No. 46,234.—THOMAS HALL, Boston, Mass.—*Voltaic Soles.*—February 7, 1865.—The nature of this invention will be evident from the claim.

*Claim.*—The combination of the non-conducting sole or base with a series of alternate plates of dissimilar metals lapping upon each other, so that their points of contact may be kept bright by the friction caused by the motion of the foot, and allowing the moisture or perspiration of the foot to act upon both metals at the junction of the plates.

No. 46,235.—THOMAS GEORGE HAROLD, Brooklyn, N. Y.—*Wire Fork for Toasting, &c.*—February 7, 1865.—This invention consists in the construction of a toasting iron with one or two pieces of wire so coiled at the back end as to form a spring, which, operating on the jaws of the toaster by reverse action, draws them together and holds the bread or whatever is being toasted or broiled, the handles being twisted over each other so that one of them works in a slot guide on the other; a wire ring is also coiled around them at the point of crossing, to hold the jaws in place.

*Claim.*—First, constructing an apparatus for toasting, broiling, &c., of two clamps, pressed towards each other by a spring or springs, in substantially the manner described and shown.

Second, retaining the said clamps in correct position to each other by guides, in the manner and for the purpose specified.

Third, the combination of the clamps *a a'*, spring *b*, and guides *c* or *e*, for the purposes set forth.

No. 46,236.—THOMAS S. HUDSON, East Cambridge, Mass.—*Hanger for Lamps.*—February 7, 1865.—This invention consists in a lamp-support hanger, composed of a series of glass tubes with end caps of metal strings, on a metal rod with an end of a metallic attachment.

*Claim.*—The lamp-support hanger, as composed of a series of glass tubes, the end caps or cups, the rod or its equivalent, and the end attachments, arranged relatively to one another, substantially as described.

No. 46,237.—JULIUS HORNIG, Oswego, N. Y.—*Shears for Cutting Metal.*—February 7, 1865.—This invention relates to a method of holding the free end of the lever of the shears up to, or connecting the same with, the eccentric which operates the shears, and also to the application of a washer to the hub or trunnion of the shears. The shear lever is connected to the eccentric by means of a strap guided in a groove on the eccentric, with which is combined a radial arm secured to the lever by means of a pin on which it is free to vibrate. The upper end of the shear lever is formed with a curved face and combined with an eccentric moving against its face, where it is held by means of a radial vibrating arm.

*Claim.*—First, the metal shears connecting the shear lever to the eccentric, by means of a strap guided in a groove on the eccentric, in combination with a radial arm secured to the lever by means of a pin *L*, on which it is free to vibrate, substantially as above described.

Second, also the curved face *d*, of the upper end of the shear lever, in combination with an eccentric against whose face it moves, and against which it is held by means of a radial vibrating arm *K*, substantially as described.

Third, also forming shoulders *s*, on the faces of the washers *O*, and shoulders *t*, on the faces of the bosses or projections *q*, in order to prevent the rotation of the washers during the vibrations of the lever, substantially as described.

No. 46,238.—WILLIAM S. HUDSON, Paterson, N. J.—*Device for Operating Safety Valves.*—February 7, 1865.—This invention consists of a spring, composed of steel, and constructed in the form of one-half of an elliptical spring, which is confined at its centre by a yoke, its

ends resting upon an eccentric roller or shaft, and a cross-bar rests upon two levers running parallel with the spring. The opposite end of the spring rests upon the eccentric roller in such a way that upon its being turned that end of the spring is raised and an additional amount of pressure is thrown upon the cross-bar at the opposite end, and through it upon the levers, which in turn communicate it to the bell cranks, which are operated by the rods extending up to the safety-valve levers. The novelty consists in the combination of the bell-crank levers with the eccentric shaft and lever with which it is manipulated in such a way that any pressure upon the safety valve which is sufficient to start it from its seat will continue its motion through its entire range, and thus prevent any increase of pressure in the boiler by providing an increased area for the escape of the steam.

*Claim.*—The bell-crank levers, in combination with the means L M, or their equivalents, for rapidly changing the initial tension of the spring I within wide limits, substantially as and for the purpose herein set forth.

No. 46,239.—HENRY HUNGERFORD, Brooklyn, N. Y.—*Key Fastener*.—February 7, 1865.—The key is provided with a hole in that part which enters the lock. The bolt of the lock is placed generally directly over the keyhole and key, and when the key is turned the end of the bolt, reduced for the purpose, enters the hole in the key and holds it so that it cannot be turned in or pushed out of the lock, neither can a tool be inserted to pick the lock.

*Claim.*—The combination and arrangement of the bolt C, constructed substantially as described, and its guide or case B, with the perforated key, the whole combined and operating substantially as and for the purposes set forth.

No. 46,240.—ANTHONE ISKE, Lancaster, Penn.—*Extension Table*.—February 7, 1865.—This invention consists in placing a central support beneath the table, when closed or extended, the whole forming an ornamental centre or extension table.

*Claim.*—The central column or support A, with its cross-pieces B C and slots *d*, in combination with the cross-slats *s* and their sliding pivots 2 3 4 and 5 in said slots *d d d d*, arranged and operating substantially in the manner and for the purpose specified.

No. 46,241.—HENRY JACKSON, Brooklyn, N. Y.—*Lock*.—February 7, 1865.—In this lock the stub, designed to enter the gates of the several tumblers after the latter shall have been properly set by the action of the key, is formed of two or more thin plates of unequal length, having a breadth sufficient to extend across the edge of the series of tumblers, and all hinged to one and the same pin. Each of the vibratory tumblers has its free end notched in the usual manner, and when force is improperly applied to the stub or to the bolt, for the purpose of compelling the stub to enter the gates of the tumblers, the sharp edges of the plates, constituting the stub, will catch into different notches in the ends of the tumblers, and, retaining their hold and moving as the tumblers move, will effectually prevent the proper arrangement of the gates and thus, of course, prevent the bolt from being retracted.

*Claim.*—The stub F, constructed as described of a plurality of movable plates *c c* of unequal length or projection, employed in combination with the tumblers E, in the manner and for the purpose specified.

No. 46,242.—C. JILLSON, Worcester, Mass.—*Machine for Pointing Wires in the Coil*.—February 7, 1865.—This device consists of a revolving mandril, supported on a suitable frame, and bearing a cross-head, to the face of which two cutters are attached, with their edges towards the centre and opposite each other, and between which the wire is passed for the purpose of reducing it to a uniform size. In a slot or longitudinal mortise within this cross-head, and behind the first set of cutters and attached to a bar sliding in said slot, are two more cutters, which reduce the point of the wire to its proper size, which latter, in passing inwards, presses against a spring rod sliding longitudinally in the mandril, and which carries, on an arm projecting through a slot in said mandril, a pattern, which, sliding at right angles with the cutter bar and across the cutter head, presses its inclined surface against a stud in said cutter bar, and forces the latter, with its cutters, outward from the centre, and gives to the wire, by said movement, a shape corresponding to the pattern.

*Claim.*—Combining the cutter head and pattern with a revolving shaft having a spring or yielding roll within it, as and for the purpose herein described and represented.

Also, in combination with a revolving cutter head and pattern, the extending of the cutter stock or cutters that are operated by said pattern clear through the cutter head, so that said cutters will not be thrown out or in anywise moved by the centrifugal force of the revolving head, substantially as described.

No. 46,243.—BENJAMIN F. JOSLYN, Stonington, Conn.—*Revolving Fire-arm*.—February 7, 1865.—This invention relates to a device for locking the cylinder immediately after each partial revolution thereof, and consists in the employment of a pin or bolt passing vertically downward through the top and rear portion of the frame into suitable recesses in a central projection at the rear of the cylinder, which is depressed by a spring on the top of the frame, and is raised by a slot in the nose of the hammer engaging with a small transverse spring pin passing through the said bolt, whereby the cylinder remains normally locked, except during the instant required for revolving the cylinder.

*Claim.*—The rod I and its transverse rod m, in combination with the recessed and inclined end of the hammer; the whole being arranged and operating for the locking and unlocking of the cylinder, substantially as and for the purpose herein set forth.

No. 46,244.—MORRIS L. KEEN and HUGH BURGESS, Rogers's Ford, Penn.—*Apparatus for Evaporating and Calcining Alkaline Solutions.*—February 7, 1865.—This invention consists in an apparatus for recovering alkali from the waste liquor of paper pulp. The heat after passing over the evaporating hearth is carried up into the chamber and over the surface of the alkaline solution in the pans. The alkaline solution is supplied to the upper pan from a reservoir, and flows from thence into the pan next below it, and so on until it reaches the hearth when it is ready for calcination. The calcination is effected in the furnace, which is constructed like the hearth of the evaporator.

*Claim.*—A furnace constructed for the purpose of evaporating the alkaline solutions used in the pulping and disintegrating of vegetable substances, in which the heat is utilized by means of an arrangement of pans or their equivalents, substantially as and for the purpose described.

Also, in combination with the main evaporator the finishing or calcining furnace or furnaces, substantially as described.

No. 46,245.—CHARLES KETCHAM, Penn Yan, N. Y.—*Corn Sheller.*—February 7, 1865; antedated January 29, 1865.—This invention consists of a series of guides and agitators for facilitating the passage of the ears into the body of the machine. Through the centre of the hopper passes a perpendicular shaft carrying a hollow metallic cylinder. This shaft works in a journal in the bed piece of the machine, and has a pulley outside for connecting with any power to be applied. This cylinder is surrounded by a series of concave plates, pivoted at top and bottom so as to swing outside by pressure of very large ears, and held in place by springs. The insides of these concave sections or plates are provided with rows of teeth. The interior cylinder, the surrounding plates, and bottom of the exterior casing are perforated with holes to facilitate the passage of the corn as fast as shelled.

*Claim.*—First, the cylinder H, when made as specified and used for the purpose set forth. Second, the concave when composed of the sections F, substantially as specified.

Third, the guides M, and agitators I, when constructed, arranged, and used as specified. Fourth, encasing the concave, substantially as specified, and for the purposes set forth.

Fifth, the plates B and C, and hopper L, when constructed as specified, and used in combinations with the other parts of the machine as set forth.

No. 46,246.—HENRY KNIGHT, Brooklyn, N. Y.—*Tapping Branch for Water and other Pipes.*—February 7, 1865.—This device consists of a cup or thimble, screw-threaded on the interior, and having a flange at bottom. This is inserted from the inside through a suitable hole in the sheet-iron shell of the pipe, and properly secured at the place desired; after which the cement lining is made in said pipe, surrounding the flange on the bottom of the cup. A hole can then be drilled through the bottom and a branch pipe attached in the usual way.

*Claim.*—As a new and improved article of manufacture the flanged cup A, having one end closed, and otherwise adapted to form connections for pipes.

No. 46,247.—ANGELINA J. KNOX, Boston, Mass.—*Method of Preserving and Restoring Natural Flowers.*—February 7, 1865.—This invention consists in imbedding the flowers in sand, the large flowers being previously taken to pieces, and subjecting them to a temperature of 80° Fah., until all the water is expelled. If old and dried flowers are used they are soaked for a short time in warm water or alcohol, and then smoothed out with the fingers. After the flowers have been thus prepared they are coated with wax, such as is used in the manufacture of ordinary wax flowers, the large flowers which have been taken to pieces being put together in the same manner as in making artificial flowers.

*Claim.*—The process for restoring, treating, and preserving natural flowers, substantially as hereinbefore described.

No. 46,248.—JOHN P. LAIRD, Altoona, Penn.—*Car Bumper Attachment.*—February 7, 1865.—This invention relates to the guides for the bumper and bumper plates of railway cars, and consists in so embedding the said guides in packing blocks of wood that they can be formed much lighter and less expensive than ordinary guides, and at the same time are more capable of resisting the violent strains and shocks to which they are subjected; also, in a stop-page block for limiting and regulating the limit of the bumper plate to suit different styles of springs.

*Claim.*—First, the guide plates F, imbedded in the wooden blocks E E, and secured to the beams of the car, substantially as and for the purpose herein set forth.

Second, the stirrup N, confined between the beams E E, and secured to the bumper beams substantially as specified.

Third, the adjustable stopping blocks M, adapted to the plates F and G, and to a bolt b, which passes through the same, all substantially as set forth for the purpose specified.

No. 46,249.—JAMES A. LAWSON, Troy, N. Y.—*Ventilating and Check Draught Damper*.—February 7, 1865.—This invention consists of a vertical revolving damper around a stove or furnace pipe arranged before a horizontal damper placed in the exit pipe, and of less diameter than the exit pipe, and so constructed that when the vertical damper is open the horizontal damper is at right angles with the pipe.

*Claim.*—The employment of a horizontal damper in any stove or furnace exit-pipe, and of less diameter than such pipe, and above a vertical cylinder damper around such pipe, so as to more effectually check the draught by bringing the hot air within the said pipe in contact or conjunction with cold air admitted from room surrounding such pipe through said vertical cylinder damper, in the manner substantially as herein described and set forth.

Also, the combination of the vertical cylinder damper B<sup>2</sup>, with the horizontal damper C, arranged immediately over the said vertical cylinder damper B<sup>2</sup>, in the manner substantially as and for the purposes herein described and set forth.

No. 46,250.—JAMES A. LAWSON, Troy, N. Y.—*Heaters for Buildings*.—February 7, 1865; antedated November 15, 1864.—This invention consists in the arrangement of a return flue under the ash-pit of a heater of ordinary construction, in such manner that by a simple division plate in the flue or chamber the heat obtained from this source is economized and carried up into the flues leading into the apartments of the building.

*Claim.*—The employment of the return flue space or chamber G, in combination with the vertical pipes D and E, and with the fire chamber A, in the manner and for the purposes substantially as herein described and set forth.

No. 46,251.—ROBERT LEE, Cincinnati, Ohio.—*Shutter Hinge*.—February 7, 1865.—This invention consists in furnishing that part of the hinge attached to the window frame and surrounding the base of the sash with a small spur flange or wheel, into the teeth of which can be made to catch a spring latch or pawl, fastened to the other part of the hinge, attached to and capable of being operated from the inside, and by means of which the shutter can be secured in any position desired.

*Claim.*—As a new article of manufacture the shutter hinge herein described, consisting of the parts A B, flange C, the radial notches *c c c*, gravitating catch D, fulcrum pin *d*, and hand lever E, all constructed, arranged, and operating as specified.

No. 46,252.—WILLIAM A. LIDTHALL, New York, N. Y.—*Feed-water Heaters for Steam Boilers*.—February 7, 1865.—This invention consists in arranging the heater in conjunction with the condenser, and placing them in such a position that the steam from the engine on its way to the condenser shall pass through the heater in order that a portion of its heat shall be abstracted therefrom and imparted to the feed-water. The steam thus reduced in temperature passes directly out of the heater and into the condenser, when the process of condensation is completed, and the water of condensation may be used for any purpose that is desirable.

*Claim.*—The heater I, arranged as described and placed between the exhaust of a steam engine and the condenser A, as and for the purpose set forth.

No. 46,253.—WILLIAM A. LIDTHALL, New York, N. Y.—*Condenser Case*.—February 7, 1865.—This invention consists in forming channels in the sides of the case for the reception of the tube sheets for the purpose of making available the room otherwise occupied by the flanges required for bolting such sheets to the case of the instrument. These channels are equal in width to the thickness of the tube sheets which are fitted to them, and are made tight with them, and when used the case can be entirely filled with tubes, leaving no more space between the tubes and case than is required for the circulation of the steam.

*Claim.*—The manner of constructing the sides A A', of the case, with the apertures *a*, combined with the manner of securing the tube sheets B B', and division plates D D, (or either of them,) in place, as herein set forth.

No. 46,254.—WILLIAM A. LIDTHALL, New York city.—*Condenser*.—February 7, 1865.—This invention consists in a partition placed in the chamber in which the cooling water is received, for the purpose of compelling such water to pass the tubes of the lower or cooling section of the condenser, and returning through the upper or condensing series of tubes; the object being to more thoroughly cool the condensed water than could be done if the cooling water entered both the condensing and cooling tubes at the same time. It further consists in the arrangement of the induction and eduction nozzle for the steam and water, and the division plates at one and the same end of the condenser, whereby the steam and water are each made to traverse the entire length of the instrument in opposite directions before being discharged therefrom.

*Claim.*—First, the combination of the division plate C' with the section of cooling tubes A, as and for the purpose set forth.

Second, the combination of the division plate C' with the tube sheet and cover to the end of the case (as shown,) for the purpose of dividing the space between the said tube sheet and cover into two sections as set forth.

Third, the arrangement of the cooling water-receiving nozzle B, the cooling water-delivery nozzle D, the steam nozzle E, the condensed water nozzle G, and the division plate C', placed at the same end of the apparatus as shown, and for the purposes set forth.

No. 46,255.—C. L. LOCHMAN, Carlisle, Pa.—*Funnel*.—February 7, 1865.—This invention consists of a double funnel, the liquid being caused to flow through the inner one and the air to escape between the two, a guide-rod descending to sustain a valve at the end of the funnel within the vessel, the funnel being closed by said rod in the act of lifting from the vessel; an escape tube permits the flow of the liquid to any desired point when it rises in the air passage.

*Claim*.—The valve or stopper *c*, with its handle and connecting rod *k* and *l*, or their equivalents, the elastic cone or washer, *g*, or its equivalent, the cock, *d*, and springs or catches, *m m*, constructed and connected substantially as and for the purposes specified.

No. 46,256.—JOSIAH LYMAN, Lenox, Mass.—*Draughting Scale*.—February 7, 1865.—This invention consists in having the edges of the rule or scale bevelled, and finished with minute divisions, or cuts, to serve as guides for the dotting pin, from the upper edge quite down to the paper.

*Claim*.—First, such an arrangement, application and graduation of the bevelled edge of the scale herein set forth as render it a universal reliable guide to the needle point in making a dot on the paper at the end of any required or given distance.

Second, the arrangement and application of the slide spring, as set forth, to the scale herein described, by which it is brought in contact with and becomes a part of the protracting trigonometrometer, or of a T square.

No. 46,257.—WALTER K. MARVIN, New York city.—*Hoisting Apparatus*.—February 7, 1865.—This invention has for its object the economical application to hoisting machines otherwise ordinarily constructed, of available power derived from some prime mover, thereby to save labor and expense.

*Claim*.—The method herein described of applying power to hoisting apparatus by the employment of friction pulleys operating by compression upon a rope or cable, or the equivalent therefor, substantially in the manner herein set forth.

No. 46,258.—P. J. MARQUA, Cincinnati, Ohio.—*Hobby-horse*.—February 7, 1865.—This invention consists of a rearing hobby-horse, made so that several children may ride at a time, each assisting to manage the horse by means of a balancing beam, which enables them to keep an equilibrium.

*Claim*.—First, the combination rearing hobby-horse A, vibrating beam B, seat I, and spring K, arranged and operating substantially as set forth.

Second, the slots G G', and the devices for the relative adjustment of the seat and horse, as explained.

Third, the arrangement of the rearing hobby-horse A, seat I, reins O O', and pulley T, adapted to operate as set forth.

Fourth, the India-rubber thong K, and clamp L L' M, arranged as set forth.

No. 46,259.—JOHN A. MILLER, Paducah, Ky.—*Breech-loading Ordnance*.—February 7, 1865.—A rotating breech-piece, or charge chamber, passes through a corresponding opening in the breech of the cannon. It contains two or more chambers—rotates laterally, having two legs which join below where it is pivoted. It is longer than the diameter of the gun, so that while one chamber is in line with the bore the other can be loaded. This rotating charge chamber is pivoted to a projection extending below the rear end of the gun.

*Claim*.—The shape and construction of the balance C, operating in a corresponding curved aperture E, in the breech of the gun, in combination with the support B, as herein described, for the purpose of firing cannon rapidly.

No. 46,260.—JONATHAN E. MORSE, Boston, Mass.—*Evaporator for Saccharine and other Liquids*.—February 7, 1865.—This invention consists in a series of three or more pans with hood-like covers. The pans are so arranged that the liquid may flow from one to the other by pipes. By means of a series of flues and dampers, the products of combustion from the furnaces are made to pass under each or all of the pans at pleasure. In the top there is an opening in the steam passage with perforations on the upper side. When steam is permitted to issue from these orifices the vapor is drawn off from the surface of the pans, and evaporation thereby increased.

*Claim*.—A train of evaporating pans with furnaces and flues arranged to operate in connection therewith, substantially as described.

Also, the employment with an open evaporator of a cover and steam jets, when arranged to operate substantially as specified.

No. 46,261.—SAMUEL PENNOCK, Kennett Square, Penn.—*Machine for Bending Sheet Metal*.—February 7, 1865.—This invention consists in the construction and arrangement of the horizontally sliding bed plate, down upon the face of which the sheet of metal is bent by means of a hinged block or jaw in the usual manner. Thus each end of the bed plate is continued out beyond the frame and rounded so as to form journals, and the latter are connected by two stirrups to two eccentrics, arranged respectively in opposite ends of a shaft, by means of which the bed plate may be forced forward to press the sheet of metal up against

the stationary jaw. Two other eccentrics, operating from below, serve to elevate or depress the hinged edge of the bed plate, so that its upper surface may be adjusted in a horizontal plane or at different angles thereto. The sheet of metal to be bent is inserted in a vertical position between the edge of the bed plate and the stationary jaw, its lower edge resting upon adjustable gauges below, and after the bending has been effected the stirrups are slipped off the ends of the bed plate and the latter removed so as to release the bent sheet.

*Claim.*—First, the hinged removable and adjustable bed plate C, constructed and operating as described.

Second, in combination with the above, the mode described of adjusting the bed plate C horizontally by means of the eccentric G, arranged and operating as shown, or in an equivalent manner, for producing the same result.

Third, in a machine for bending metal constructed as described, adjusting the bed plate C vertically, by the employment of the eccentric R, arranged and operated as shown, or its equivalent, substantially in the manner specified.

No. 46,262.—JAMES L. PIKE, Lynn, Mass.—*Horseshoe Calk.*—February 7, 1865.—This invention consists in making of cast iron, chilled or otherwise, a calk with one or more dowel pins on the upper side, to enter corresponding holes in the shoe.

*Claim.*—As a new article of manufacture a horseshoe calk of chilled or "case-hardened" cast iron, constructed substantially as and for the object specified.

No. 46,263.—WILLIAM RADBOURNE, Rahway, N. J.—*Mangle.*—February 7, 1865.—This invention consists in a mangle, the lower roller of which has its bearings on friction rollers, while its upper roller is pressed down by the action of a semi-elliptical spring and thumb-screw.

*Claim.*—The application to a mangle of the semi-elliptical spring D, acting simultaneously on both boxes of the roller C, in combination with friction rollers *e*, supporting the gudgeons of the lower roller, constructed and operating substantially as and for the purpose set forth.

No. 46,264.—A. C. G. RATHBURN and A. M. COMSTOCK, Lyme, Conn.—*Belt Coupling.*—February 7, 1865.—This invention consists in the use of a plate, provided with a slot, to admit the ends of the belt to be coupled, and with two toggle jaws, the latter being depressed, after the ends of the belt have been adjusted, clamp the same without the use of rivets or any other fastening.

*Claim.*—The plate A, provided with a slot *a*, and operating in combination with the toggle jaws B, substantially in the manner and for the purpose set forth.

No. 46,265.—ORRIN REEVE, Greenport, N. Y.—*Washing Machine.*—February 7, 1865.—This invention consists in combining with a tub, the inner ribs of which extend from the top to the bottom thereof, a rubbing board, a scolloped rim, and radially ribbed rubbers on its under side to act in conjunction with similar ribs on the bottom of the tub.

*Claim.*—In combination with a tub having ribs *a* on its inner perimeter, extending from the bottom to the top thereof, and radial flutes or ribs on its bottom, a rubbing board to act in conjunction therewith, having a scolloped perimeter and radial ribs on its under side, as and for the purpose herein described and represented.

No. 46,266.—J. J. RIDDLE, Cincinnati, Ohio.—*Vapor Lamp.*—February 7, 1865.—This invention consists in a combination of parts which can be understood only by a careful reference to the drawings and specifications.

*Claim.*—First, the use of the needle *n*, working through the burner and from the outside of the lamp into the valve *d*, in combination with the oil tube O, reservoir A, and air pump P, all constructed and operating in the manner and for the purpose substantially as herein shown and described.

Second, the valve S', applied in combination with the case *t* and air pump P, as specified.

Third, placing the valve seat *d* in the top of the burner, substantially as shown in figure 3, for the purposes set forth.

Fourth, the combination of the socket R', and pipe *g'*, with the oil tube O, needle *n*, valve seat *d*, air pump P, and reservoir A, constructed and operating in the manner and for the purpose herein specified.

No. 46,267.—T. J. ROOT, Galena, Ill.—*Trip-Hammer.*—February 7, 1865.—This device consists of a lever or hammer arm inserted in a rock shaft, from the opposite side of which projects another short arm coupled by a knuckle-joint to a vertical connecting rod, surrounded by a spiral spring, thrusting downwards. The lower end of this rod is connected to and operated by a treadle.

*Claim.*—The rock shaft B, with hammer rod C attached, in combination with the knuckle-jointed arm H I, provided with the spiral spring J and treadle F, all constructed and arranged to operate as and for the purpose herein set forth.

No. 46,268.—JAMES E. ROGERS, Chelsea, Mass.—*Machines for Jointing Oval Frames*.—February 7, 1865.—The object of this invention is to furnish a machine to be used on a bench for fitting the joints in an oval frame, and it consists in two tables or platforms provided with stops and adjustable rests so arranged as to give the proper adjustment to the frame, and that the angle of the joint will be the same on the parts that join together.

*Claim*.—As my invention, the jointing apparatus or machine, composed of the two platforms A B, the stops *b f*, and adjustable rests C D, arranged and constructed substantially in manner and so as to operate as and for the purpose specified.

No. 46,269.—LOUIS SAARBACH, Philadelphia, Penn.—*Tobacco Pipe*.—February 7, 1865.—This invention consists in the peculiar construction and arrangement of the curved tube, and the bulb or receptacle for the nicotine.

*Claim*.—The curved tube A, combined with the detachable bowl *c*, stem B, and reservoir D, as and for the purpose described.

No. 46,270.—LUCRETIA E. SALLEE, Decatur, Ill.—*Mode of Constructing Dolls' Heads and other Toys*.—February 7, 1865.—This invention consists in making dolls' heads of leather, strengthened by a composition plaster, glue, and vinegar, so as to render them lighter and less fragile than the ordinary articles of a similar nature.

*Claim*.—First, making dolls' heads and other toys of an outer covering of leather, or its equivalent, and an inner body of cement, which sets and hardens, so as to support the said covering in shape, substantially as above described.

Second, the cement or composition above described for making a body or backing to sustain the outer surface of the toy.

No. 46,271.—WILLIAM SAXTON, Venice, Mich.—*Seeding Machine*.—February 7, 1865.—In this machine the seed box is pivoted in such a manner to the main frame that by raising the forward end of the box the feeding device is thrown out of gear. The seeding device consists of a valve, worked by a cam on the inside of the wheels. Drag blocks are attached to the seeding box by links, and these are depressed or elevated by means of a cord or chain, and when in contact with the ground the drag blocks cover the seed.

*Claim*.—First, the pivoted seed-distributing plates H, arranged within the seed box D, in combination with the projections *d*, on the wheels B B, the springs *c*, on the adjustable seed-box D, all arranged substantially as and for the purpose herein set forth.

Second, the covers, J J, attached to the seed box by links K K, in connection with the cord or chain L, substantially as and for the purpose herein described.

No. 46,272.—JOHN F. SCHUFFENECKER, St. Louis, Mo.—*Brick Moulds*.—February 7, 1865.—This invention relates to a mode of operating brick moulds by means of a lever and rods, links, and axles.

*Claim*.—Operating the bottom of the moulds by means of the lever D, rods F and G, link I, and axles E E, for the purpose above specified.

No. 46,273.—JOHN F. SCHUFFENECKER, St. Louis, Mo.—*Machine for Making Bricks*.—February 7, 1865; antedated February 3, 1865.—This invention consists in the employment of a series of devices designated in the claim, and requiring a reference to the specification and drawings to be properly understood.

*Claim*.—First, the manner adopted by using the toe *j*, pan *i*, cup *k*, and tube *h*, in combination, for the purpose herein described.

Second, the scraper A, operated by the cams *i i*, fork lever *j*, and joint K, as for the purpose above described.

Third, the manner to secure the position of the scraper A, by means of the spring Z, and arm I, as shown in the specification.

Fourth, the manner adopted to regulate the friction of the machine by the cams *u u*, lever *f*, guide *g*, set screw *h*, in combination with the slot of the rod *z*, as shown and described in the foregoing specifications.

Fifth, the mode adopted to prevent the clay from settling between the hopper and the quadrant by means of the plate S, grooves R, steel bar *m*, and set screws Q Q Q Q, or their equivalents, for the purpose set forth.

No. 46,274.—THOMAS SHORT, Fairmount, Ill.—*Cultivator and Harrow*.—February 7, 1865.—In this machine the beams carrying the cultivator belts and reversible arms, carry also harrow teeth upon the upper side; a frame removable at pleasure couples together the beams at the rear end, and admits of adjustment to any width of the rows.

*Claim*.—First, the frames D D, provided with shovels E, and teeth F, the clevises *a d*, and screws or bolts *a'*, in combination with the adjusting frame G H, the latter permitting the cultivator frames to be operated simultaneously or independently, and adapting said frames when used as a harrow to be brought together at their rear ends, as herein specified.

Second, the combination of the treadles I, loops J, and connecting rods or wires *t*, for adjusting the frames D D, substantially as explained.

No. 46,275.—WILLIAM S. BATES, Westfield, Mass., and CATHARINE S. SMITH, Kingston, N. Y., executors of John Smith, deceased.—*Drying and Glazing Gunpowder*.—February 7, 1865.—This invention consists in drying and glazing the gunpowder at one operation. The barrels are secured around a revolving shaft, and are so arranged that a current of hot air may be caused to circulate through them. The powder is placed in these barrels through doors near each end. Steam, or hot water may be used when enclosed in pipes, instead of hot air.

*Claim*.—The application of heat to the cylinders or other vessel in which powder is glazed, while the process of drying is going on, for the purpose of glazing and drying the powder at one operation, substantially as above described.

Also, the method of carrying the same into operation by means of hot air and the apparatus above described, substantially as above set forth.

No. 46,276.—DANIEL E. SOMES, Washington, D. C.—*Buildings or Rooms for the Preservation of Food and for other purposes*.—February 7, 1865.—This invention consists in constructing the buildings with multiple walls, having intervening spaces. The cooling material, such as ice and salt, is placed in a separate apartment communicating with the chamber to be cooled, and so that the cooling material may entirely surround the said chamber or preserving room. For the purpose of ventilating the preserving chamber, tubes lead to the outside, and to cool the air entirely these tubes are made to pass through a cooling room, or through the cool spaces between the walls. When water pipes are used in the building the air tubes may be made to pass through the water pipes or through water tanks provided for the purpose. Instead of a single apartment, several, one within the other, may be constructed.

*Claim*.—First, the walls and chambers as described, in combination with the cooling and ventilating pipes, constructed and used as and for the purpose set forth.

Second, the series of rooms and buildings, substantially in the manner and for the purpose shown.

Third, the series of walls and chambers when used in combination with a process of rarefaction and ventilation and cooling appliances.

Fourth, cooling the air in buildings in which water tanks or pipes are used, by passing the air tubes or ducts through, in, between, or around the water-pipes or tanks.

No. 46,277.—DANIEL E. SOMES, Washington, D. C.—*Refrigerator for Preserving Articles of Food*.—February 7, 1865.—This invention consists in constructing refrigerators with a series of walls, floors, and roofs, with chambers between; the said walls, floors, &c., being made of wood, metal, or other suitable material, or one or more of them may be made of cork or glass. The inner chambers, and one or more of the others, are filled with salt and ice, or other freezing mixture. Air is supplied to the interior of the refrigerator by means of pipes communicating with the atmosphere at their upper ends, and with the interior of the refrigerator near the floor at their lower ends. The air is discharged from pipes, the inner ends of which communicate with the interior of the refrigerator above the inner ends of the supply pipes. The refrigerator is provided with doors, which are rendered air-tight when closed by means of India-rubber tubing, or its equivalent, placed around the joint.

*Claim*.—First, a refrigerator with multiple wall, and so constructed that the interior shall be separated from the cooling substance, thereby excluding dampness.

Second, the use of cork for the walls in the manner and for the purpose shown.

Third, the use of glass for the walls as and for the purpose set forth.

Fourth, the pipe larger at the bottom than top, substantially as described.

Fifth, the air-tight compartments substantially as and for the purpose shown.

Sixth, the vulcanized rubber tubing, or its equivalent, when used in the manner set forth.

Seventh, the vulcanized rubber tubing when applied to any door or drawer for a similar purpose.

No. 46,278.—J. M. STONE, North Andover, Mass.—*Eccentric adjustment*.—February 7, 1865.—Many instances occur where it is desirable to secure two or more eccentrics on the same shaft, and to have them capable of adjustment within the limits of the capacity given by their construction, without the employment of set screws and keys, or other devices which form projections, and are therefore liable to catch and tear objects with which they come in contact. The object of this invention is to reciprocate, to any desired amount, the rolls in such drawing frames as are shown in the patent No. 42,076, granted March 29, 1864, to Chase and Stone.

*Claim*.—For the purpose of adjusting the amount of throw of any of two or more eccentrics on the same shaft, the construction and arrangement operating substantially as described.

No. 46,279.—SAMUEL S. STONE, Troy, N. Y.—*Paper Collar Button-hole Punches*.—February 7, 1865.—This invention is explained by the claim.

*Claim*.—First, two oblong male end button-hole punchers L L, arranged lengthwise, or nearly so, to each other upon and adjustable longitudinally with two separate simultaneously reciprocating slides H H, in combination with two corresponding oblong female punch-

receiving dies N N, having like arrangement and longitudinal adjustment on a stationary bed, substantially as herein described.

Also, two oblong end button-hole punchers, adjustable axially on and longitudinally with two separate simultaneously reciprocating slides, in combination with two corresponding punch-receiving dies, having like axial and longitudinal adjustment on a stationary bed, substantially as herein described.

Also, two oblong end button-hole punchers L L, arranged lengthwise, or nearly so, to each other, and a central one M, arranged crosswise thereto, on separate simultaneously reciprocating slides H H and I, and with the central punch and slide adjustable transversely to the end one, in combination with two corresponding punch-receiving end dies N N and a transversely adjustable central one o on a stationary bed, substantially as herein described.

Also, two oblong end button-hole punchers arranged lengthwise, or nearly so, to each other, and a central one placed crosswise thereto, on separate reciprocating slides, and with the end punchers and their slides adjustable longitudinally, in combination with corresponding central and longitudinally adjustable end punch-receiving dies on a stationary bed, substantially as herein described.

Also, two oblong end button-hole punchers arranged lengthwise, or nearly so, to each other, and a central one placed crosswise thereto, on separate simultaneously reciprocating slides, with the end punchers and their slides adjustable longitudinally and the central ones transversely, in combination with corresponding longitudinally adjustable punch-receiving end dies, and a transversely adjustable central one on a stationary bed, substantially as herein described.

Also, a central oblong button-hole punch and two axially adjustable end ones, on separate simultaneously reciprocating slides, with the end punchers and slides adjustable longitudinally and the central ones transversely, in combination with corresponding axially and longitudinally adjustable end punch-receiving dies, and a transversely adjustable central one on a stationary bed, substantially as herein described.

Also, two oblong button-hole punchers and a central one, all adjustable axially on separate simultaneously reciprocating slides, with the end punchers and slides adjustable longitudinally and the central ones transversely, in combination with corresponding axially and longitudinally adjustable end punch-receiving dies, and a transversely and axially adjustable central one on a stationary bed, substantially as herein described.

Also, the arrangement of adjustable guides d, in combination with end or end and central button-hole punchers, arranged on and adjustable laterally with separate simultaneously reciprocating slides, and working into corresponding adjustable punch-receiving dies on a fixed bed plate, substantially as and for the purpose herein set forth.

No. 46,280.—JOHN B. TERRY, Auburndale, Mass.—*Apparatus for Carburetting Oil*.—February 7, 1865.—This invention consists of two vessels connected together by means of a pipe, and provided with bell covers, which dip into annular channels filled with water. The air enters into a casing within one of the vessels, and is forced under the water contained in it by means of scoops which are attached to a vibrating shaft. The air as it escapes from the water rises to the top of the vessel into the bell cover. It is conveyed thence to the carburetting vessel by means of a tube, said tube being connected with a hollow rotary shaft, provided with hollow perforated arms at the lower end beneath the hydrocarbon liquid, so that the air as it escapes passes up through the hydrocarbon. The carburetting vessel is provided with a rotary shaft, to which is attached agitating arms, the ends of which have attached to them pieces of sponge, or similar material.

*Claim*.—The combination of one or more air cells and vibratory scoops or buckets, applied together and within the cistern A, substantially in the manner and so as to operate therewith as described.

Also, the combination of the "Barker's mill," or rotary air and agitating distributor K, with the vaporizing cistern B, the cistern A and its air-forcing apparatus.

Also, the combination and arrangement of the shaft F, its arms and sponges, or their equivalents, with the agitating and air distributor K, the cisterns A B, and the air-forcing apparatus of the cistern A.

Also, the combination of the friction brake apparatus, consisting of the lever W, the constructing rod Y, the arm z, the screw shaft a', and the stud b', or its equivalent, for the purpose set forth, with the air-forcing apparatus and the vaporizing cistern B, provided with the bell c, to operate as specified.

Also, the said friction apparatus, constructed substantially as described, as well as its arrangement with respect to the bell c and the vibratory sector, as specified.

No. 46,281.—JOSEPH S. TRUE, Garland, Maine.—*Machine for Planting Potatoes*.—February 7, 1865.—This invention consists of a rectangular frame, with the front end mounted on two wheels, and the rear end on a roller. Upon this frame is a hopper, underneath which are two boxes or cells into which the potatoes fall. At one end of the cells is a stationary knife, and in this cell is a head or piston, driven by suitable gears, which in its movement forces the potatoes against the knife, when they are cut, and the piece falls through an opening and is conducted to the ground.

*Claim.*—First, a reciprocating slide, provided with one or two boxes, and arranged in relation with bottom plates, one or more to operate in the manner substantially as and for the purpose herein set forth.

Second, a horizontal stationary cutter or knife, arranged with a reciprocating slide and boxes to operate substantially as and for the purpose specified.

Third, the placing of the cutter or knife in such a relative position with the sliding boxes that the latter will feed or convey the potatoes to the former, both above and below it, as set forth.

Fourth, the furrow share F at the bottom of the seed-conveying tube F, the covering shares G G, and roller I, when used in combination with the potato-dropping device, substantially as and for the purpose set forth.

No. 46,282.—CHARLES T. WAKELEY, Madison, Wis.—*Bill Holder*.—February 7, 1865.—This invention consists of a peculiar way of adjusting the straps and bands, so as to vary the thickness and elasticity, &c.

*Claim.*—The hasps or fasteners C and D, in combination with the straps and bands I and H, adjustable in the manner and for the purposes shown and described.

No. 46,283.—FREDERICK A. WEBER and WILLIAM H. GREENE, Woonsocket, R. I.—*Soda-water Apparatus*.—February 7, 1865.—This invention consists of a chest containing the sirup vessels and valve case. Into this valve case the pipes from the sirup vessel and the pipe from the soda fountain extend, it being connected to the draught tube. The valve case is constructed with a series of valves, one for each sirup pipe, the said valves being operated by rods, and it is also provided with a valve for the soda tube, which is operated by the rod.

*Claim.*—The valve case *d*, when arranged within the box *a* and with the system of sirup pipes *i*, fountain pipe *e*, and outlet pipe *f* connecting therewith, the valves in the sirup and fountain pipes being operated by a system of levers and valve rods, and the whole constructed and arranged substantially as shown.

No. 46,284.—FREDERICK A. WEBER and WILLIAM A. GREENE, Woonsocket, R. I.—*Draught Tube for Soda-water Apparatus*.—February 7, 1865.—This invention consists of a casing, within which is a tube *b*, the same tube being a continuation of a tube *c*. The internal diameter of the tube *b* is decreased at its lower end, forming a passage *d*. Just above this passage are two lateral orifices, which are controlled by a gate that encircles the tube *b*, the said tube being connected with a stem and handle.

*Claim.*—The construction of a draught tube for soda-water apparatus, with an inner tube *b*, having an outlet *d* and lateral orifices *e*, opening into the tube *a* and controlled by a gate *f*, the whole being constructed and arranged to operate substantially as set forth.

No. 46,285.—WILLIAM S. WEIR, Jr., Monmouth, Ill.—*Corn Plough*.—February 7, 1865.—This invention consists in a mode of fastening up the rear end of the plough beams when not in use. The beams are hung over hooks at the end of two pivoted rods, whose interior ends pass through a staple on a lever jointed to the rear of the draught pole. As the lever is raised the plough beams drop to the ground.

*Claim.*—The curved rods M attached to the back end of the bars *d d*, and bent in the form of hooks *k* at their lower ends, in connection with the lever *o* attached to the back end of the draught pole C, all being arranged and applied substantially as and for the purposes specified.

No. 46,286.—HENRY F. WHEELER, Boston, Mass.—*Magazine Breech-loading Fire-arms*.—February 7, 1865.—The barrel is surrounded by a tube in which it slides longitudinally, and when in its forward position receives the charge from an oscillating magazine in the stock. By the movement of the trigger the magazine is turned down, and the barrel flies back under the operation of a spring against the breech piece, which also oscillates during the loading and firing process. The charge is fired by the action of the barrel in being thrown back against the breech piece.

*Claim.*—A fire-arm having a sliding barrel, the charge of which, inserted at the breech, is fired by driving back the barrel against a percussion or breech block.

Also, the swinging breech or percussion block, constructed and arranged to operate with respect to the barrel and the magazine or cartridge tube, substantially as set forth.

Also, the magazine or cartridge tube, when arranged to connect with and be disconnected from the barrel, substantially as set forth.

Also, holding the barrel in forward position, or the arm cocked, by the employment of the forward end of the magazine tube, substantially as described.

Also, the arrangement of the breech or percussion block to swing above the path of movement of the cartridge tube, to permit the connection of the cartridge tube and barrel and the cocking of the piece.

Also, the arrangement of the cartridge tube, to allow of its movement to permit the descent into place of the breech block, and the spring movement of the barrel.

Also, the manner of withdrawing and expelling the shell of the exploded cartridge by de-

taining it upon the cartridge tube or breech block, and throwing it therefrom, substantially as set forth.

Also, producing the forward movement of the barrel and the downward movement of the cartridge tube by the direct action of the trigger lever, substantially as set forth.

Also, the arrangement of a barrel within a case or cylinder containing the spring, by which the rear or percussion movement of the barrel is produced.

Also, so combining the magazine tube and percussion block that they move together or as one piece, substantially as set forth.

No. 46,287.—GEORGE W. WHITE, New York, N. Y.—*Apparatus for Calcining Ores*.—February 7, 1865.—This invention consists of a furnace and cylinder, which latter is supported on rollers, and is lined with fire brick. It is also provided with passages containing the ore to be calcined, the said passages being designed to conduct the products of combustion from the furnace. The passages are grooved from end to end, and the ore is supplied to the same by means of a hopper, the supply being regulated by means of the feed device, and escapes through into the trough, from which it is washed by a stream of water. Near the top of the smoke stack is a coil of perforated pipe, so arranged that water may be forced through it horizontally in every direction, so as to stop the fine particles of ore as they escape and carry them down to the compartment where they may be collected.

*Claim*.—First, the combination in the rotating cylinder of separate combustion and calcining flues or passages, substantially as and for the purposes herein specified.

Second, the furnace located at the opposite end of the rotating cylinder to that at which the ore or other substance to be calcined enters, substantially as and for the purpose herein set forth.

Third, so combining the calcining flues or passages of the rotating cylinder with the furnace that the gases eliminated from the ore or other substance in the said passages may enter into combustion in the furnace, substantially as and for the purposes specified.

Fourth, in a rotating cylinder, with separate combustion and calcining flues or passages combined with a furnace, as described, constructing the inner surfaces of the separate calcining passages with grooves, cavities, or projections, substantially as and for the purpose herein specified.

Fifth, the coiled perforated water pipe *f* placed in the smoke-stack or vertical flue, in combination with the rotating cylinder, substantially as and for the purpose herein specified.

No. 46,288.—FREDERICK WOOD, Somerville, Mass.—*Clasps for Wearing Apparel*.—February 7, 1865.—A convex disk is riveted to the cloth. One side of the periphery thereof is notched down nearly to the bottom of such cup or concavity; the opposite side thereof has a lateral slot at its centre. A bar carrying a disk at one end and another disk near the other end, is riveted to the cloth by the first disk, the other disk fitting into the concavity of the independent disk first described, the extremity of the bar passing through the slot described, the bar between the two disks, descending into the notch.

*Claim*.—The improved fastener, as composed of two parts, A B, made substantially as described.

No. 46,289.—RUFUS WRIGHT, New York, N. Y.—*Pencil Sharpener*.—February 7, 1865. This device consists of a single piece of steel, of such a form that, when folded, it has a spiral cutter for the wood, a guard piece, and filing groove for pointing the lead.

*Claim*.—First, the spiral and tapering cutter A, constructed in the manner and employed for the purpose herein specified.

Second, the guard B, formed in one piece, with the cutter, A, and employed to protect the same, and as a protection from the same, as set forth.

Third, in combination with a guard B, constructed as herein described, the angular groove O', for pointing the lead.

No. 46,290.—THOMAS C. BALL, assignor to LEWIS GRAHAM, HENRY HARLOW, and A. G. WASHBURN, Springfield, Vt., and said HENRY HARLOW and A. L. THOMPSON, administrators of the estate of Lewis Graham, assignors to A. G. WASHBURN.—*Mop Holder*.—February 7, 1865; antedated February 14, 1863.—Within a tubular case, mounted on a suitable handle, is a series of curved springs, arranged so as to retain the cloth of the mop within the case, and adapt themselves to varying thicknesses of cloth.

*Claim*.—The combination and arrangement of curved springs *a a a*, substantially as described with the slotted head B, as set forth.

No. 46,291.—WILLIAM S. BELL, assignor to himself and W. S. BELL, JR., Boston, Mass.—*Forming Paper Collars*.—February 7, 1865.—The collar is pressed, preparatory to folding, upon a bed having a slot therein on the line to be folded. Within this slot, and descending into a vessel of water beneath, is a suitable piece of cloth by which the collar is dampened when pressed upon the slotted bed.

*Claim*.—The improved method of treating paper collars or collar blanks, to define and determine the line of fold, substantially as set forth.

No. 46,292.—HIRAM BERDAN, assignor to LEVI P. MORTON, trustee of HIRAM BERDAN, ABIA A. SELOVER, and WILLIAM B. BENSON, Boston, Mass.—*Cartridges for Breach-loading Rifled Fire-arms*.—February 7, 1865.—The rifling of the barrel being extended through the counter bore, the cartridge case is so formed as to fit the grooves and present the projectiles in proper position to go through the bore, the faces of one being coincident with those of the other; much friction and upsetting being thus avoided. The interior faces of the cartridge must coincide with those of the bore proper.

*Claim*.—An indestructible cartridge case, with an irregular exterior to correspond with the counter bore with which it is to be used, and a rifled interior, to correspond in size and form with the bore proper, in combination with one or more projectiles previously prepared to fit the rifling of the bore, the whole constructed and arranged substantially as herein described, so that the chamber will be protected from fouling, and the balls properly located in respect to the rifling of the bore, without the necessity of their entering the latter in the act of loading.

No. 46,293.—ABIJAH E. and JOSIAH B. BLOOD, assignors to themselves and WILLIAM J. and BENJAMIN F. LARABEE, Lynn, Mass.—*Coal and Ash Sifter*.—February 7, 1865.—This invention consists of a sieve set in a circular box of sheet metal, provided with a cover, said sieve being convex, or having its middle portion slightly raised, so as to break up in sifting what is called the dead centre, and to force all the coal, &c., to the outside edges, where it can be thoroughly sifted; it is placed over a receptacle for ashes, and when used a rotary motion is imparted to the apparatus by a handle on the outside.

*Claim*.—First, the construction of coal sifters with a vibratory bottom C C, separate from the enclosing case B B A A, carrying the screen D, or wire cloth E, with free movement independently of the stationary case.

Second, the construction of the vibratory bottom or screen E with a decided convexity upward.

Third, the combination of the case A A B B with the cross-bar Q fastened thereto, the operating rod D, and the independent convex screen E, substantially as described and for the purpose set forth.

No. 46,294.—SETH BORDEN, assignor to HENRY H. JACQUES, Newark, N. J.—*Picking Cylinders of Machines for Disintegrating Fibrous Materials*.—February 7, 1865.—This invention consists in a spiked wooden cylinder, which revolves at a very high velocity, and is spirally wound with a strand or strands of wire, for the purpose of strengthening the cylinder, and enabling it to run with safety at much higher than ordinary velocities without the danger of flying to pieces by centrifugal force.

*Claim*.—Binding the picker cylinders of pickers for disintegrating fibrous materials, as and for the purpose described.

No. 46,295.—ANTHONY CLARK, assignor to himself and GORHAM BLAKE, Todd's Valley, Cal.—*Flexible Pipe for Mining*.—February 7, 1865.—This invention consists of a conduit made in sections of thin sheet-iron pipes, connected together by means of strips of canvas or other material wound round the ends of the pipes, and confined thereon by means of clamps. Each section is provided with an aperture, closed by a valve opening inward to prevent the pipe from collapsing when the water is shut off.

*Claim*.—The improved flexible conduit, made as described, viz., of metallic pipes, cloth connections, clamping rings, valves and valve openings, constructed and arranged together substantially as represented and explained.

No. 46,296.—G. F. J. COLBURN, Newark, N. J.—*Coat and Hat Rack*.—February 7, 1867.—A T-shaped contrivance is attached to a coat and hat hook, and a U-shaped groove is formed in a rail or slip of wood. The hook can be readily attached to the rail by placing the T-shaped projection within the U-shaped groove, and the hook can be slid forward or backward at pleasure. When it is desired to make the rack thus constructed portable, a device is attached to the rail, by means of which it may be attached to or taken from a wall at pleasure.

*Claim*.—The combination of the hook C, bar or strip A, attachments D D, constructed, arranged, and applied in the manner and for the purpose set forth.

No. 46,297.—JOHN N. DENNISON, assignor to himself and GOULD BROTHERS, Newark, N. J.—*Rivets*.—February 7, 1865.—This invention consists in forming the head and washer with a projecting edge which, when pressed into the material riveted, takes hold of a much larger portion of the latter than is usually done by a mere shank.

*Claim*.—A rivet or a washer with a projecting edge, constructed in the manner and for the purpose herein above specified.

No. 46,298.—THEOPHILUS HILTON, Providence, R. I., assignor to himself and WM. D. HILTON, Cranston, R. I.—*Tree Protectors*.—February 7, 1865.—In this device the trough that surrounds the tree is made as usual, the hood being so constructed that it wholly covers the trough, and can be put around the tree and secured without the use of solder or screw bolts, and may also be removed at pleasure without injury.

*Claim.*—First, the hood C, for the tree protector, composed of the flanch b, rod c, and lip a, and united by means of a clasp e, the whole constructed substantially as described.

Second, the construction of a hood, as described, or its equivalent, with a trough, or its equivalent, encircling the trunk of a tree, substantially as and for the purpose specified.

No. 46,299.—JOSEPH B. JOHNSON, assignor to himself and CHARLES BUFFUM, Lynn, Mass.—*Shoes.*—February 7, 1865.—This invention consists in the employment of a false inner sole, in connection with the last and upper; in the combination of pins with the false inner sole for the purpose of holding the main sole in place; and of spurs with the false sole, for the purpose of securing the upper and outer soles in their proper position.

*Claim.*—The above-explained improvement in lasting a shoe, the same consisting in the employment of a false inner sole B, in connection with the last E and upper A, and drawing the upper on the said sole and last by means of thread or sewing f, or the equivalent thereof, extended across the inner sole, but without going into or through it.

Also, the combination of two or any other suitable number of pins and clamps a b c, or their equivalents, with the false inner sole B, and for the purpose of holding the main sole in place with respect to the upper, when the latter is confined to the false sole by thread or sewing f, or its equivalent, going across the false sole, in manner substantially as specified.

Also, the combination of the spurs g g, or their equivalents, with the false sole B and the upper A, when lasted as specified, such spurs being for the purpose of maintaining the said upper and the outer sole in their proper relation at or near the ball of the foot.

Also, the combination of one or more pins a c, or their equivalents, with the false sole B, and the sewing f extending across such sole and about the said pin or pins, substantially in manner as hereinbefore explained.

Also, the arrangement of the inner sole B and the sewing i by which the outer sole C and the upper A are united, the said sewing, under such arrangement, being carried around and outside of the periphery of, but not through, the inner sole.

No. 46,300.—SAMUEL JOHNSTON, assignor to himself and RUFUS L. HOWARD, Buffalo, N. Y.—*Combined Rakes and Reels for Harvesters.*—February 7, 1865.—This invention relates to that class of machines in which the rake and reel arms rotate about a vertical shaft, and it consists in an arrangement of two cam tracks or ways, in either of which the heel ends of the rake and reel arms may be made to travel at the pleasure of the operator by means of a spring gate, operated by a lever and cord, whereby the attendant is enabled to cause said reel arms (or any one of them) to act as rakes to sweep the grain off the platform whenever a sufficient amount is accumulated thereon to form a gavel.

Each reel arm is furnished with a hinged extension which reaches beyond the cutters, insuring a proper action of the reel upon all the grain within reach of the cutters, without interfering with the proper action of said arm as a rake, whenever it is desired to have it do so.

*Claim.*—First, making an automatic rake and reel combined, so that the operator can by means of a lever and cord, and the arrangement of two tracks or ways in which the elbow of the rake moves, cause either rake head to operate at pleasure as a rake and at the same time act continuously as a reel, all constructed in the manner herein described and substantially as and for the purposes set forth.

Second, in an automatic rake and reel combined for harvesting machines, the arrangement whereby the operator, without stopping the action of reeling, can drop either of the rake heads down to the platform and hold it thereon while removing the grain therefrom, constructed substantially as described and for the purposes set forth.

Third, the arrangement of the tracks or ways, when they are arranged so that in reeling the rake or rake head will drop down nearly to the cutters and move the cut grain back from them and then rise up and pass over the cut grain, substantially as described and for the purposes set forth.

Fourth, the arrangement of the driver's seat in connection with the lever, cord, and gate, substantially as described and for the purposes set forth.

Fifth, in a combined automatic rake and reel, changing the path of the roller which controls the motions of the rake when it is removing the grain from the platform, substantially as described and for the purposes herein set forth.

Sixth, the arrangement of the two tracks or ways in combination with the gates or switches, for the purposes herein set forth.

Seventh, the lever and spring attached to the forward gate, in connection with the cord for operating the same, for the purposes set forth.

Eighth, the use of the pointed washer attached to the elbow of the rake below the roller, for the purposes set forth.

Ninth, the hinged extension attached to the outer end of the rake head, applied substantially as described and for the purposes set forth.

Tenth, the combination of the elbow of the rake head with the roller and the outer and inner tracks or ways, constructed substantially as described and for the purposes set forth.

No. 46,301.—GILBERT D. JONES, assignor to himself and CHARLES PLACE, New York, N. Y.—*Coffee Roaster and Grain Dryer.*—February 7, 1865.—This invention consists of a series of horizontal plates, each rotating in a separate stationary box, the top and bottom of

which are also horizontal, and form the heating surfaces. The boxes are set a short distance apart, one above another, and communicate with each other at the central portion by an enclosed passage. The top surfaces of the said plates are smooth, wings being attached to the under sides over these plates, and to the top of the boxes are also attached wings. When the plates revolve, these wings agitate the berries or grain, and cause them to circulate over the plates and pass down through the apparatus.

*Claim.*—Forming a coffee roaster of a series of horizontal plates, each arranged to rotate within a closed box, the bottom of which is also horizontal, and which boxes receive and discharge near the centre, substantially in the manner set forth herein.

No. 46,302.—HUGH L. MCAVOY, assignor to himself and ELIAS S. HUTCHINSON, Baltimore, Md.—*Apparatus for Carburetting Air.*—February 7, 1865.—This invention consists of a gas-holder contained within a vessel and provided with a sealing device, which consists of an inverted cup, the lower end of which is submerged in a liquid contained in the annular space between the cylinders. In the act of raising the gas-holder the lower end of the cup is lifted out of the liquid, and allows the air to flow into the gas-holder. The hydro-carbon liquid is introduced through the cock, and floats upon the water contained in the vessel, and the gas is withdrawn by means of a tube. A pan having a sleeve fitting over the tube, and provided with a plate, may be placed within the gas-holder to contain the hydro-carbon liquid.

*Claim.*—First, manufacturing air gas and enriching other gas by the described mode of using a holder C to contain air, receive the carbonaceous matter as it rises from the, oil in the form of vapor, and force the gas into the pipe, wherein it is conducted off, as explained.

Second, the plate E2, employed in connection with the pan E, to cause the air to pass to the pipe B, in contact with the oil and in a state of compressure, substantially as set forth.

Third, the sealing device, consisting of the cup F, cylinders G G, and a body of liquid between the latter, substantially as described.

No. 46,303.—JAMES S. MCCURDY, Bridgeport, Conn., assignor to ELIAS HOWE, Fairfield, Conn.—*Sewing Machine.*—February 7, 1865.—In this invention it is designed to use a single thread, but by the introduction of a bobbin and its thread in the double-headed looping hook, so that the loops of the needle-thread may pass over such bobbin; the feed being in the usual direction, a chain-stitch interlaced with the second thread running through its loops will be formed. If the feed under these conditions be reversed, a common lock-stitch would be produced.

*Claim.*—The combination in a sewing machine of the reciprocating needle bar with a double-headed rotating hook, so formed that when rotated in combination with a reciprocating needle it will draw a loop of needle-thread through the two preceding loops, substantially as set forth.

Also, the combination of the double-headed looping hook with the shaft that imparts motion to it by means of two pins which are controlled by a cam, the whole operating substantially as set forth.

Also, the combination of the feeding instrument of the sewing machine with a shaft making one revolution to two descents by the needle-carrier through the intervention of two cams of unequal projection, the whole operating substantially as set forth.

Also, the combination of the feeding instrument with a shaft making one revolution to two descents by the needle-carrier through the intervention of two cams and two adjustable wipers, one of said cams having two protuberances of equal projection, and the other having one protuberance of greater projection than those of the other cam, the whole operating substantially as set forth.

No. 46,304.—NATHANIEL MILES, Buckland, Mass., assignor to BAY STATE HARDWARE COMPANY, Northampton, Mass.—*Table Cutlery.*—February 7, 1865.—This improvement consists in the construction of the bolster of table knives, and is so plainly illustrated in the drawings as to need no description.

*Claim.*—First, in table and other cutlery the bolster C D, formed separately from the tang and having the fastening part D narrower than the scale B, and let into and concealed within the latter, substantially as and for the purpose within set forth.

Second, in connection with the above the employment of the hooks, or additional parts E E, adapted to lock the separate bolster pieces to the scales B B, the whole being concealed within the latter, substantially as within set forth.

No. 46,305.—CHARLES NEER, assignor to the ARCHITECTURAL IRON WORKS, New York, N. Y.—*Metallic Window Sash.*—February 7, 1865.—The object of this invention is to facilitate the construction of window sashes of sheet metal, with a view to render them light, cheap of construction, more durable, and in many respects superior to ordinary wooden or metallic sashes.

*Claim.*—A sheet or rolled-metal window sash with sides 1 2 3, flanged strips 4, two part meeting rail B', plug 9, stiles A A, and flanged strips or bars c d, all substantially as herein shown and described.

No. 46,306.—JOHN PETRIE, Jr., and JOHN KENWORTHY, Lancaster, England, administrators of the estate of SAMUEL TAYLOR, deceased, assignors to THOMAS CLEGG, North Andover, Mass.—*Machine for Washing Wool*.—February 7, 1865; patented in England July 8, 1853.—In this invention the teeth of the rotating cylinder alternately protrude and recede, in order to take up and discharge the washed wool. The vibrating frame, moving up and down, agitates and stirs the wool in the liquid in conjunction with one of the vibrating frames, whose teeth pass between those of the frame and describe a curved path, feeding the material forward.

*Claim*.—What is considered to be new, and therefore as the invention of the said Petrie and Taylor, is the combination of a rotating or reciprocating plunger *c*, one or more reciprocating beaters or agitators *e e'*, and a rotating wheel or drum cylinder or frame *r*, armed with teeth, prongs, or tines, the whole of such parts being applied to a trough and actuated by mechanical means, substantially as described.

Also, the combination of the rotating plunger *c* and the vibrating or reciprocating arms *e*, for stirring, agitating, and moving forward the wool in the trough.

Also, further, in combination with the trough the endless apron *w*, or its equivalent, and the squeezing rollers, the lifting drum or frame *r*, above shown and described, for raising the washed wool out of the water and depositing it on the travelling endless band or other contrivance for conveying it to the squeezing rollers or some receptacle for receiving it.

Also, the combination of the squeezing rollers, the lifting wheel, one or more stirrers or agitators, and the plunger, the whole being arranged and applied to a trough substantially as and to operate as specified; and also their combination with the vibrating frame *d*, arranged in the trough as described.

No. 46,307.—AUGUST PRUSMAN, Lingen, Hanover, assignor to BERNHARD SCHAFFER and CHRISTIAN BUDENBURG, New York, N. Y.—*Spark Arrestor*.—February 7, 1865.—This invention consists in the arrangement of a conical tube, cylindrical deflector, jacket and water tank, in combination with the stack and jacket, in such a manner that the products of combustion in passing up through the inner pipes are carried between the conical suspended pipe and the deflector, from whence by their own gravity they fall into the water tank and are extinguished.

*Claim*.—The arrangement of the inverted conical tube *F*, cylindrical deflector *H*, jacket *K*, and water tank *I*, in combination with the smoke-stack *E*, jacket *C*, and exhaust pipe *A*, all constructed, applied and operating as and for the purpose herein set forth.

No. 46,308.—AUGUST PRUSMAN, Lingen, Hanover, assignor to BERNARD SCHAFFER and CHRISTIAN BUDENBURG, New York, N. Y.—*Spark Arrestor*.—February 7, 1865.—This invention consists in combining a single pipe, constructed in such a manner that it has a decreasing diameter from its base to about one-third of its height or length, from which point it has an increasing diameter to its top, or the remaining two-thirds of its length, with a single exhaust pipe placed directly under the axis of the smoke-pipe.

*Claim*.—A smoke-stack *A* for locomotives, expanding from the point *a* toward the top and bottom in about the proportion herein specified, and applied in combination with the exhaust pipe *B*, in the manner and for the purpose described.

No. 46,309.—THOMAS SHAW, assignor to himself and PHILIP S. JUSTICE, Philadelphia Penn.—*Mode of Compensation for loss of Motion*.—February 7, 1865.—This invention consists in the employment of a spring to receive surplus motion in the operation of engine counters requiring a regular and measured stroke.

*Claim*.—The combination of spring *k* and *m*, crank wheel *d*, and rod *f*, when connected with the recording movement *n*, in order to operate engine counters requiring a regular measured stroke, in the manner and for the purpose herein described.

No. 46,310.—GEORGE K. SNOW, Watertown, Mass., assignor to himself, MARCH BROTHERS, PIERCE & Co., Boston, Mass.—*Paper Shirt Collars*.—February 7, 1865.—This invention consists in the imitation stitching on both sides, so that the collar may be reversed or turned down.

*Claim*.—Improved manufacture of paper collars—that is, one having on each of its two opposite sides indentations or imprints in imitation of stitching, the whole being substantially as and for the purpose specified.

No. 46,311.—E. VALENTINE and M. T. RIDOUT, assignors to themselves and WILLIAM BECK, Milwaukee, Wis.—*Machine for Making Metallic Tubes*.—February 7, 1865.—This device consists of a tapering mandrel secured in a standard, sliding vertically through a slot in the table or platform of the machine. On each side of the mandrel, but a little below its level, are hinged two clamps, the free ends of which pass beyond the standard. The space between these clamps corresponds in shape and size to the mandrel and thickness of the metal to be operated on. This is cut in the proper shape, and adjusted across on the top of the clamp; the mandrel is then depressed, bending the metal between the clamps, which then close and swage the metal around the upper surface of the mandrel, which is then allowed to rise, and the tube finished for soldering is removed.

*Claim.*—In combination with a movable mandrel G, or its equivalent, the hinged sliding jaws A A, pivoted upon a supporting block or table B, and operating substantially in the manner and for the purpose herein set forth.

Also, in combination with the jaws A A and movable mandrel G, or its equivalent, securing said jaws by adjustable pivots so as to adapt them to mandrels of different proportions, substantially in the manner herein set forth.

No. 46,312.—HENRY W. VEREGGE, assignor to BENJAMIN C. WHITE, MARSHALL HENRY and WILLAM CAIN, Jr., Richmond, Ind.—*Fanning Mill.*—February 7, 1865.—This invention relates to the method of hanging the sliding doors to supply air to the fan wheel, and consists of grooves on the inside of the strips which hold the doors in place, and a corresponding projection attached to the outside of the door which fits into the groove. The advantage claimed is, that the doors do not become clogged with dust.

*Claim.*—Hanging the slides or shutters of fanning or other similar mills to the frame, or to a piece connected to the frame by means of a tongue, strip, or block on said slides or shutters, and a horizontal groove or grooves in the face of said frame or piece, as and for the purpose set forth.

No. 46,313.—WILLIAM YOUNG, Washington, D. C., assignor to himself and CHARLES F. STANSBURY, Philadelphia, Penn.—*Ship's Galley.*—February 7, 1865.—This invention consists of a caboose stove for burning coal, having three grates in front so arranged that one or all may be used at a time, and a rear grate, over which are three large boilers. Over a central front grate is a large oven, and between the front and rear fires is another; the products of combustion from the front fires circulate up around and over the front oven, on top of which are apertures for cooking vessels; boilers may be placed over the side fires; and on the top of the stove boilers or cooking vessels can be used. Pipes from the top of the large boilers convey the steam arising in cooking to the smoke flue. Convenient arrangements are provided for the draught and for removal of ashes. The smoke flue is so divided by a central partition as to give separate passages from the front and rear fires. The galley is designed chiefly for use in vessels of the navy.

*Claim.*—First, the combination and arrangement of the fireplaces A' B' C' and D' and the oven E', substantially in the manner and for the purpose specified.

Second, the arrangement and combination of the fireplaces A' B' C' and D', with the oven E', substantially in the manner and for the purpose described.

Third, the arrangement and construction of the fireplaces A' B' C', oven E', and side recesses J K L and J' K' L', substantially in the manner set forth.

Fourth, the arrangement in a ship's galley of three or more fireplaces varying in capacity, substantially as and for the purpose described.

No. 46,314.—EMANUEL BURG, Basle, Switzerland, and LOUIS GUILLEMIN, Dieboldsheim, France.—*Machine for Dressing and Finishing Threads, &c.*—February 7, 1865.—This invention relates to an apparatus which is applicable for the purpose of dressing, finishing, and imparting lustre or gloss to all threads or filaments of silk, cotton, flax, and other fibrous substances, but more especially to yarn thread, or filaments of waste silk, or floss silk, which, by the use of this apparatus, can be rendered equal in appearance to silk, and thereby much enhanced in value.

*Claim.*—The combination of a winding frame, substantially such as herein described, with the bobbins b, bath e, wipers g, and steamchests h and i, all constructed and operating in the manner and for the purpose substantially as set forth.

No. 46,315.—AUGUSTE DESGROFFE and ACHILLE OLLIVIER, Paris, France.—*Hydraulic Apparatus.*—February 7, 1865.—This invention consists in gradually introducing into a water-tight vessel or box, which is filled with water or other non-compressible liquid, and provided with one or more movable sides or fixtures, or made expansible, a cord or rope, in such a manner that by said rope powerful pressure is exerted on the sides of the box, which, when movable or expansible, transmit the power thus exerted on their inner surfaces to bodies placed against their outer surfaces, and a powerful pressure can be exerted with comparatively little power and with an apparatus of a simple and cheap construction.

*Claim.*—The employment or use of a rope h, or its equivalent, in combination with a box A, provided with one or more plungers or movable sides, or made of some expansible material, substantially as and for the purposes set forth.

No. 46,316.—CHARLES SCHOUBERSZKY, St. Petersburg, Russia.—*Mode of Regulating Motion of Railroad Car Trucks.*—February 7, 1865.—This invention consists in the employment of two heavy fly-wheels secured to the ends of the axle, which rests either directly or indirectly upon the driving wheels of a truck in such a manner that by the action of said fly-wheels the velocity of the truck is rendered uniform, and the momentum stored up in said fly-wheels; when the truck is going down hill will assist the locomotive in drawing a train up an incline.

*Claim.*—The fly-wheels A A connected to an axle B, and supported by the peripheries of the driving wheels of a truck, with or without intermediate friction wheels, substantially as and for the purpose set forth.

No. 46,317.—WILLIAM ADAMSON, Philadelphia, Penn.—*Process for Disinfecting Noxious Vapors*.—February 14, 1865.—This invention consists in burning spent tan-bark with the fuel used in rendering lard, tallow, &c., and directing the vapors generated into the chimney along with the products of combustion, so as to disinfect the vapors from the lard or tallow.
